JW-LTBF-02 / S0-02

完整测试对话、Prompt 与图片

ROUND 01—10 · 30 CANONICAL IMAGES · 30 CANONICAL PROMPTS

Round 10 A/B/C 获 Janet“完美 / 比较完美”评价；状态为冻结候选

归档日期：2026-07-17 (Asia/Taipei)

内部研究使用 · 不公开发布可识别剧照复刻素材

0. 阅读说明

收录范围	可见会话、Round 01–10、30 份 canonical Prompt、30 张 canonical 图片、Round 05 rejected C 与关键研究。
归档原则	Prompt 全文保留；图片紧跟对应 Prompt；历史错误链显著标识；不补造缺失数据。
隐私边界	不收录推理、工具 payload、授权信息、邮箱或 API key。
状态边界	Janet 已评价 Round 10 完美；未明确说正式冻结，因此本档只写冻结候选。

1. 当前结论与最终候选

Janet：完美！……这个 ABC 版本其实还是比较完美的。

Round 10 A/B/C 是当前冻结候选。三版锁定同一原创无线电维修间、人物关系、机位与光线，保留各自景深层级，只改变最深暗部 cyan 与人物/木质中间调 magenta-red 的分区强度。

Round 10 A | 当前冻结候选

Round 10 B | 当前冻结候选

Round 10 C | 当前冻结候选

2. 测试身份与母图证据

权威测试母图 | 仅供内部视觉研究

source-record.md

记录日期：2026-07-13

测试主题：白衣人物室内近景校准

当前阶段：视觉研发 V1 | 同一电影多场景验证

原片来源

- 影片：《让子弹飞》
- 本地原片目录：`frames/让子弹飞/00\_source\_videos/4K-120fps-bilingual/`
- 已确认来源文件：`frames/让子弹飞/00\_source\_videos/4K-120fps-bilingual/[让子弹飞][120 帧].Let.The.Bullets.Fly.2010.WEB-DL.4K.HEVC.AAC.国语.中文硬字[15.59G][MP4][无水 印].mp4`
- 语言版本：国语版。5 秒片段解码 PCM 与国语原片从 00:20:00 起的对应音频样本完全一致；与川话版不一致。
- 候选帧：`frames/让子弹飞/02\_candidate\_frames\_ab/JW\_002\_goose\_town\_2000\_a.jpg`

- 第一轮筛选帧：`frames/让子弹飞/03\_round1\_selected\_8/02\_huang\_white\_interior\_closeup.jpg`
- 正式母图：`frames/让子弹飞/04\_master\_testset\_14/02\_huang\_white\_interior\_closeup.jpg`
- 正式母图规格：JPEG，3840 × 1632，约 2.35:1。
- 正式母图 SHA-256：
`d1f726958c3fe94b8739b4eb9bf87edea38f891ed3c4f658bdcfb7e24bf5b321`
- 来源链核验：候选帧、第一轮筛选帧与正式母图 SHA-256 完全一致。

对应 5 秒片段

- 文件：`frames/让子弹飞/01\_scene\_clips\_5s/04\_goose\_town\_arrival\_2000.mp4`
- 片段规格：HEVC，3840 × 1632，120 fps。
- 实际时长：视频 5.016 秒 / 602 帧；容器 5.021995 秒。
- 片段 SHA-256：
`4378fb325728347b33c4ffcf199d9a054afa2f5e0e1d49bea015870c8811900f`
- 母图所在镜头：片段开头的室内镜头；母图对应片段首帧。
- 片段内切换：约 00:00:02.067 切到院落执行画面；该切点是片段内 scene detection 结果，不等于原片绝对时间码。

原片时间码

- 精确到帧的原片时间码：`00:20:00.000`。
- 核验方法：5 秒片段开头连续三帧的 full-resolution framemd5 与国语原片 `00:20:00.000`、`00:20:00.008333`、`00:20:00.016667` 三帧逐一一致；音频样本同时一致。
- 该时间码已完成逐帧校验，不再只作为文件名定位值。

角色信息（待原片确认）

- 前景人物：白色开领长袖上衣、红棕色小圆 / 椭圆墨镜、短发与胡须的成年男性；真实角色名待连续原片确认。
- 背景人物：浅色高领长衫、长发 / 发辫轮廓的成年男性；真实角色名待连续原片确认。

- 说话者、命令对象与两人的具体剧情身份：待连续原片与音轨确认。
- 文件名中的 `huang` 只作为历史素材命名线索，不能代替角色核验。

剧情阶段

- 文件名把片段标记为 `goose\_town\_arrival`，位置约在原片 00:20:00。
- 从本地 5 秒片段可确认的段落功能是：室内人物发出命令，随后切到院落中的执行与计数。
- “到任”“鹅城”等更完整剧情定位尚未通过连续原片复核，当前标待核。

人物关系

- 画面事实：前景右侧白衣人物离摄影机更近、清晰度最高、姿态稳定；左后人物尺度更小、动作更外放且失焦。
- 叙事推测：前景人物被建立为当前镜头的权力 / 判断中心，后景人物承担发话、催促或反应压力。
- 两人的正式身份、上下级关系与台词归属待原片确认，不写成既定事实。

台词前后

- 母图烧录字幕：`你磕头！你数数！` / `You kowtow, and you do the counting.`
- 片段前文：相邻原片约 00:19:58–00:19:59 可见上一句字幕 `行了` / `Splendid!`，中间经过室内宽景；更完整对话仍待人工连续观看确认。
- 片段后文：室内镜头之后切到院落，多人执行动作，字幕进入 `一二三四五六七八……` / `One, two, three, four...`。
- 说话者与命令对象：仅凭单帧、字幕与短片段不能可靠锁定，待人工连续观看确认。

镜头叙事作用

- 用右前清晰主体与左后失焦人物建立不对等的人物权重。
- 用亮窗逆光、深色窗框和浅景深把命令者从室内环境中切出。
- 墨镜遮住眼神，配合稳定姿态，形成难以读取、掌控局面的心理距离。

- 室内发令后立即切到院落执行，以动作结果证明命令的效力，完成“权力中心 → 命令落地”的短叙事链。

证据与权利边界

- 原片、5 秒片段和正式母图仅用于本地内部视觉研究，不公开发布。
- A 版可以保留原片信息；B 版不得出现片名、导演、演员或角色真实姓名；C 版必须改为原创人物、原创场景和原创叙事。
- 不把待核的角色名、完整人物关系、真实摄影焦段或真实调色参数写成事实；语言版本与逐帧时间码已有本地解码证据。

analysis-notes.md

分析对象：`frames/让子弹飞/04\_master\_testset\_14/02\_huang\_white\_interior\_closeup.jpg`

证据纪律：空间、人物与摄影先写画面可见事实；身份、焦段、灯位与调色只写推测，不伪造拍摄或 Resolve 记录。

一、空间

前景

- 画面右侧白衣成年男性从头部到腹部上方占据主要面积，右臂贴近右下边缘。
- 画面底部中央是原片烧录中英文字幕，不属于场景陈设；生成时必须删除。

主体

- 右侧白衣、红棕色小圆 / 椭圆墨镜、短发、留胡须的男性清晰度最高。
- 光学焦点和视觉注意力锁在该人物；墨镜、暖肤色与白衣共同构成画面主锚点。

中景

- 左侧偏后有第二名浅色长衫男性，身体前倾、嘴部张开，整体明显失焦。
- 两人之间下方可见深色木质家具与小型器物轮廓，但细节不足，不能确认具体品类。

背景

- 多格高亮窗从左侧延伸到画面中部，深色窗框 / 墙面切分亮面。
- 最右侧为白灰色竖向百叶 / 格栅式门窗；窗外内容不可辨，只形成漫射高亮面。

室内空间关系

- 两人沿“左后—右前”对角线排布，前景主体与背景人物之间存在明确纵深。
- 摄影机位于室内并朝亮窗方向拍摄；窗框、人物尺度差与失焦共同建立层级。

墙体 / 窗户 / 家具 / 装饰

- 可见深绿黑墙体或窗框、矩形分格玻璃窗、右侧竖向百叶构件、中央下部深木色家具 / 器物剪影。
- 单帧无法确认具体房间类型、家具用途或装饰物名称。

人物位置

- 主体位于画面右侧约三分之二处并靠近摄影机。
- 第二人位于左侧约四分之一处并处在更深空间；两人头部高度接近，但主体因距离近而显著更大。

摄影机高度

- 建筑竖线没有强烈仰拍或俯拍变形。
- 画面结果更接近人物胸口至眼睛高度的平视机位；精确高度待核。

景别

- 前景主体为头部到腹部上方的中近景。
- 整体是带背景人物的双人纵深构图，而不是两人并列的平面双人近景。

焦段倾向

- 根据面部透视自然、边缘无明显广角拉伸、前后距离被适度压缩，倾向标准镜头至轻长焦。

- 单帧不能确认具体毫米数。

二、人物

身份层级

- 可见事实：前景人物造型辨识度高、清晰、尺度大；背景人物更小、失焦、动作外放。
- 叙事推测：前景人物是当前镜头的权力 / 判断中心，背景人物承担发话、催促或反应压力。
- 真实角色名与正式上下级关系待连续原片确认。

当下情绪

- 前景人物嘴唇收紧、动作克制，呈现冷静、笃定或轻微讥诮的印象。
- 背景人物张嘴并前倾，呈现急切、施压或高声发话的印象。

表情状态

- 墨镜遮住主体双眼，无法读取眼神；可确认的是下颌稳定、嘴部动作幅度小。
- 背景人物因失焦不能可靠判断微表情，只能确认嘴部张开。

身体姿态

- 主体躯干直立、肩部展开，一侧手臂屈曲并向腰后收，姿态稳定且收束。
- 背景人物上身前冲，动作幅度更大，形成一静一动的表演对比。

与画外信息关系

- 两人脸部朝向相近，均与镜头外的人或事件发生关系。
- 字幕为“你磕头！你数数！”，但说话者与命令对象不能只凭单帧确认。
- 浅景深让背景声音 / 动作形成压力，却不让背景人物成为第二视觉中心。

三、摄影

构图

- 非对称构图：主体压在右侧，次要人物位于左后，形成右前—左后的对角线。

- 窗框的垂直 / 水平网格提供秩序，右侧百叶形成边界；左侧亮区由次要人物填入，不是空白。
- 画幅约 2.35:1，横向空间用于同时容纳权力中心、反应人物与建筑框架。

光线方向

- 亮窗位于人物后方，是画面最强光源方向。
- 人物正面仍有可读肤色与衣服纹理，推测存在室内侧前方柔和补光或环境反射；具体灯具与灯位待核。

光比

- 亮窗与深色墙框形成高环境光比。
- 主体面部内部反差较柔，白衣仍保留褶皱，因此人物局部光比中等，不是纯剪影。

景深

- 焦平面落在前景主体；后景人物与窗格明显虚化。
- 浅景深隔离主体，同时让后景动作保持可读但不抢权。

空间压缩

- 后景人物虽明显在后，画面体量仍不小；窗格没有夸张透视收缩。
- 画面呈中等空间压缩，符合标准至轻长焦倾向，不像近距离广角，也不是极端长焦。

四、调色

以下每一项都只写：根据画面结果推测。不代表真实 Resolve 参数、节点、数值或制作记录。

Exposure

- 根据画面结果推测：主体脸部与白衣处于偏亮区，窗面接近峰值；整体曝光优先保证主体可读，同时接受窗区高亮逼近溢出。

Lift

- 根据画面结果推测：暗部保持深绿黑 / 炭黑，黑位没有明显奶灰感；toe 可能被轻微软化，但没有大幅抬黑。

Gamma

- 根据画面结果推测：中间调明亮、温暖，肤色、白衣褶皱和胡须区仍有层次；人物中间调被适度打开并保留密度。

Gain

- 根据画面结果推测：窗区和白衣高端有柔和过渡，高光不是硬切的电子白；画面结果具有较软的高光 roll-off。

Contrast

- 根据画面结果推测：环境层面由亮窗与深墙形成高反差，人物面部微反差为低到中等；不是全画面硬锐高对比。

Pivot

- 根据画面结果推测：对比重心更靠近中间调，以保住肤色与白衣纹理，同时让窗框和墙体沉下去；不能从静帧推出任何数值。

WB

- 根据画面结果推测：整体为暖中性；白衣呈奶油白 / 暖白，皮肤呈橙褐与暖桃倾向，而非冷白日光。

Tint

- 根据画面结果推测：深色背景有轻微绿 / 橄榄倾向，肤色与白衣阴影有微桃 / 微洋红感；也可能来自场景材质与光源，不能等同于真实全局 Tint 操作。

暗部

- 根据画面结果推测：暗部为低饱和深绿黑和炭灰，结构仍可读；百叶缝隙与窗框接近黑，但没有吞没全部细节。

中间调

- 根据画面结果推测：中间调暖、柔、略奶油化，主体肤色与白衣是核心；后景浅衣更灰、更低对比，以降低视觉权重。

高光

- 根据画面结果推测：窗面为柔黄白 / 暖白并带轻微 bloom；白衣明亮但主要褶皱仍可辨，避免大面积死白。

肤色区域

- 根据画面结果推测：主体皮肤偏橙褐 / 暖桃，中等饱和、有血色；皮肤与胡须微反差被柔化，红棕墨镜成为主要色彩锚点。

白衣区域

- 根据画面结果推测：主体白衣为暖奶油白，阴影略带桃灰 / 米灰；面料偏柔软的轻至中等重量棉 / 麻，袖口与躯干形成少量自然大褶皱，不是硬挺厚布或塑料亮面。

背景区域

- 根据画面结果推测：深绿黑 / 炭灰为底，与暖白窗面形成冷暖和明暗分离；背景整体低饱和，不抢主体。

材质表现

- 根据画面结果推测：白衫柔软、自然、有真实纤维和重力褶皱；墨镜镜片呈半透明红棕，镜架有小面积反光；窗玻璃 / 纱面呈漫射高亮，木质家具只保留深棕轮廓。

颗粒

- 根据画面结果推测：当前 JPEG 与显示尺度下没有强颗粒，只能看到细微有机纹理；不能确认颗粒来自源片、编码还是后期 grain。

柔化

- 根据画面结果推测：主体轮廓与皮肤没有数码过锐感，窗面略泛光，后景虚化平滑；可能由镜头、浅景深、扩散或后期共同形成，不能确认具体方法。

首轮复刻锚点

1. 右前白衣墨镜主导人物，左后浅衣前倾人物。
2. 大窗强侧逆光，深绿黑窗框 / 墙面。
3. 暖奶油白衣、暖橙桃肤色、红棕墨镜色彩锚。
4. 标准至轻长焦、浅景深、中等空间压缩。
5. 高环境反差，但面部、高光和材质保持柔和。
6. 无字幕、伪文字、logo、水印、播放器 UI；避免塑料皮肤、畸形手、错误窗格和过度锐化等 AI 痕迹。

3. 相较 JW-LTBF-01 的新增研究

1. 原创断链成为硬规则

原片 edit 改色不等于原创生成。Round 04 起固定零图像输入、独立 text-to-image，并禁止 edit、recolor、image-to-image、face transfer 与 identity transfer。

2. 整体冷暖升级为区域分区

把暗部、中间调、高光和具体身体/物体区域分开控制。最终 cyan 只进最深闭塞阴影，magenta-red 只进皮肤与少量木质中间调。

3. 双角度色彩稳定性

同场正面与侧面帧用于离线判断 peach、rose、terracotta 是否稳定；参考帧不作为生成器输入。

4. 感知梯度而非伪造 Resolve 参数

A/B/C 百分比只代表 Prompt 强度标签；调色结论继续注明根据画面结果推测。

5. AI 脏点的源头诊断

脏感来自重复小物、高频边缘、粗糙/氧化/灰尘/颗粒/晕光 token 叠加，不只是分辨率问题。

6. 干净不等于空

删除无叙事价值的脏乱，不删除说明空间用途、工作状态、人物位置与权力关系的背景信息。

7. 背景叙事组

背景由装饰转成镜头语法：每组道具都回答地点、行动、进度、权力差与空间深度。

8. 设备和单镜头证据边界

可核实全片层面的摄影机、镜头、胶片与 Super 35；没有 camera report 时，75mm/T3.2/3.5m 只能是测试假设。

9. GPT Image 2 景深能力边界

模型理解镜头和焦平面语义，但没有物理 DOF 控件；参数不能替代可见结果描述。

10. 景深写成可见验收结果

规定前景清楚什么、背景五官何时合并、手指和小控件何时消失，比只写 75mm/T2.8 更有效。

11. 景深失败冲突词审计

clearly readable、material identity 和过量精确道具会反向逼模型画清背景。

12. 严格同场景 bracket

A/B/C 共用人物、空间、机位、光线与色彩，只改变一个变量，结果才可归因。

13. 导演风格模块化

把风格拆为色彩分配、背景叙事、空间层级、景深衰减、人物权力构图和材质频率。

4. Round 01—10 完整实验记录

每轮依次保存 Janet 反馈、本轮单变量、研究材料、完整 Prompt 与对应图片。

Round 01

Janet : 重置第一轮；先写完 A/B/C，再同轮生成三张。

唯一主动变量	建立 A 内部、B 描述、C 安全转译三条基线。
阶段结果	颜色太清；人物需要一点红与一点暖；背景基本够。
生成边界	Round 01-03 为历史 reference/edit 链；Round 04 起为零图像输入独立原创生成。

Round 01 • Prompt A

文件 : *round-01/prompt_A_internal.md* · SHA-256 :

ef2765a8dc913b3c3c23c5db70f946f3b3e25e06668827e45c35c78f37c730d9

Prompt A | 内部原片研究版 | Round 01 Reset

用途：内部研究。允许保留原片信息和剧情语境，不公开发布。

Prompt

Use case: photorealistic-natural

Asset type: internal source-frame reconstruction test

Input image: Image 1 is the private master-frame reference. Use it to study the exact character hierarchy, indoor space, wardrobe, light direction, depth of field, color relationships, and optical rendering.

Create one new realistic 2.35:1 cinematic still as an internal reconstruction study of *Let the Bullets Fly*, Mandarin source, at the verified source timecode 00:20:00.000 and the first frame of `04\_goose\_town\_arrival\_2000.mp4`. The visible subtitle says “你磕头！你数数！”；the previous visible subtitle is “行了”，and the next courtyard shots begin counting. Remove all subtitles from the generated image. The exact character names and speaker attribution remain pending human confirmation, so do not invent names.

Characters and power: preserve the two visible period character identities and their unequal screen power. The adult man in the right foreground is the visual authority center. He wears a loose white open-neck long-sleeve shirt and small red-brown tinted round-to-oval glasses. He is closest to camera, sharply focused, upright, controlled, and difficult to read behind the lenses. His near-side arm bends back toward his waist, with the elbow creating a clear contour near the right frame edge. The adult man in the left background wears a pale high-collar long gown, leans forward with his mouth open, and carries more urgent outward movement. Keep him recognizably secondary and clearly defocused. Do not add people.

Space: retain the right-front / left-rear diagonal, broad luminous gridded windows, deep olive-green to charcoal wall and window frames, the pale vertical louvered structure at far right, and restrained dark-wood furniture silhouettes in the lower middle ground. The interior must feel orderly, inhabited, and period-correct, not like a modern set.

Camera: asymmetric two-person depth composition in a 2.35:1 frame. Crop the foreground man from head to upper abdomen. Camera near chest-to-eye height. Standard-to-light-telephoto perspective, moderate spatial compression, shallow depth of field. The foreground face, glasses, and shirt are sharp; the rear man and windows are softly defocused. No wide-angle stretching.

Light: powerful daylight through the rear windows creates high environmental contrast and soft side-backlight. Keep believable soft interior bounce on the foreground face and white shirt. Let the windows glow near cream-white with mild optical bloom, but preserve the shirt's fold structure and prevent clipped white patches.

Color result: warm-neutral daylight; living orange-brown and muted peach skin; warm cream-white shirt with pale peach-gray shadows; dense olive-green, green-black, charcoal, and dark wood in the room; red-brown glasses as the small color accent. Preserve natural midtone density, clean readable darks, and soft highlight roll-off. No gray veil and no muddy green skin.

Materials and realism: soft light-to-medium cotton or linen shirt with gravity, subtle weave, and a few broad folds. Semi-transparent tinted lenses with coherent small reflections. Natural facial asymmetry, pores, beard and hair texture, believable ears and arm anatomy, straight window grids, subtle organic grain, and gentle optical softness.

Avoid: subtitles, Chinese or English text, pseudo-text, logos, watermark, player UI, extra people, modern objects, modern fashion, invented props, warped windows, malformed glasses, duplicate anatomy, wax skin, beauty retouching, fake HDR, hyper-sharp pores, or glossy advertising polish. This is Round 01 research output, not a final artwork.

Round 01 · A | JW-LTBF-02_A_r01.png

Round 01 • Prompt B

文件 : round-01/prompt_B_descriptive.md · SHA-256 :

c9fc1b839ae4bd5025e1508c5db93e8999f41ea7899c69e3da7cd20b7e3b288f

Prompt B | 描述性复刻版 | Round 01 Reset

用途：描述性复刻。不得出现电影名、导演名、演员名或角色真实姓名。

Prompt

Use case: photorealistic-natural

Asset type: descriptive cinematic reconstruction test

Input image: Image 1 is a private reference only for spatial hierarchy, wardrobe category, indoor light, palette, depth of field, and camera language. Do not preserve or copy either face.

Create one new realistic 2.35:1 cinematic still inside an orderly early-20th-century Chinese interior of unspecified function. Two original adult men occupy unequal visual and social positions.

Characters and relationship: the dominant man stands in the right foreground, framed from head to upper abdomen. He wears a loose warm-white open-neck long-sleeve shirt and small muted dark red-brown tinted spectacles. His shoulders are open, his mouth is restrained, and his posture is calm, controlled, and authoritative. His near-side arm bends back toward his waist, with the elbow forming a clear contour near the right frame edge. The secondary man stands several steps deeper on the left in a pale stone-gray high-collar long gown. He leans forward with his mouth open and more urgent movement. The foreground man is the visual authority center; the rear man supplies pressure or response.

Both faces must be newly invented. Change the foreground man's skull shape, hairline, nose, mouth, facial-hair pattern, ears, and exact eyewear design from the reference. Change the rear man's age cues, hair shape, jaw, and facial proportions. Neither face may resemble a performer, public figure, known character, or person in the reference image.

Space: a dark, orderly period interior with broad luminous gridded windows, deep olive-green and charcoal frames, a pale vertical louvered screen at far right, and minimal dark-wood furniture silhouettes below the windows. The room is maintained and used, not ruined, not dirty, and not a modern hotel, club, showroom, or studio.

Camera: asymmetric right-front / left-rear two-person depth composition. Camera near chest-to-eye height. Standard-to-light-telephoto perspective, moderate compression, shallow depth of field. Keep the dominant man clearly sharp. Keep the rear man's silhouette, forward lean, and open mouth readable but distinctly softer. Straight window geometry, natural perspective, no wide-angle distortion.

Light: strong rear-window daylight with soft side-backlight and believable interior bounce on the foreground face and shirt. High environmental contrast, medium facial contrast. Warm cream-white windows with mild optical bloom. The face remains modeled, not silhouetted.

Color result: bright but controlled. Warm orange-brown and muted peach skin with natural blood color. Warm cream-white shirt with pale peach-gray fold shadows and no clipped areas. Dense olive-green, green-black, charcoal, and dark wood background. Rich natural midtones, clean darks, soft highlight roll-off. No gray haze, muddy green cast, pastel wash, neon teal-orange grade, hard digital clipping, or commercial gloss.

Materials and realism: soft light-to-medium cotton or linen, a few broad gravity-driven folds, subtle weave, no stiff heavy cloth and no plastic shine. Coherent tinted-lens reflections. Natural pores, asymmetry, hair, fabric weight, believable hands and arms, subtle grain, restrained micro-contrast, and soft lens rendering.

Avoid: any proper film or person reference, exact face copying, subtitles, text, pseudo-text, logos, watermarks, player UI, modern objects, extra people, warped windows, malformed eyewear, duplicate anatomy, wax skin, fake HDR, hyper-detail, and fashion-ad polish. This is Round 01 test output, not a final artwork.

Round 01 · B | JW-LTBF-02_B_r01.png

Round 01 • Prompt C

文件 : *round-01/prompt_C_safe.md* · SHA-256 :

9ef9ef0ec372d9aaa742ed0faa33403ff348d6f8c3adfa5932114614c9d89701

Prompt C | 安全原创转译版 | Round 01 Reset

用途 : 安全转译。人物、场景、叙事和局部构图全部原创，只保留抽象视觉规律。

Prompt

Use case: photorealistic-natural

Asset type: original cinematic translation test

Input image: Image 1 is a private reference only for abstract visual laws: unequal near/far power, large-window side-backlight, shallow depth, warm white clothing against dense green-black architecture, moderate spatial compression, and soft filmic highlights. Do not copy its people, exact room, plot, props, exact garment cut, exact eyewear design, or right-front / left-rear arrangement.

Create one original realistic 2.35:1 cinematic still in a fictional 1930s coastal hydrographic station immediately after a storm warning. A senior survey chief has ordered a junior radio clerk to begin a manual tide-gauge calculation before the telephone line fails. Show no written message and no visible dialogue.

Original characters: reverse the laterality while preserving only the unequal near/far power hierarchy, not the exact shot. The senior survey chief occupies the left foreground and is framed from head to upper abdomen. He is an original clean-shaven East Asian man in his late forties with a broad forehead, distinct cheek structure, swept-back hair, and narrow amber protective spectacles. He wears a soft ivory open-neck field shirt and holds a calm, contained posture that conveys practiced authority. The junior radio clerk stands deeper on the right, an original younger East Asian man with cropped hair and a narrow face, wearing a pale slate-gray stand-collar work tunic. He leans toward the chief with visible urgency. Both faces must be fully invented and unlike any performer, public figure, existing character, or person in the reference image.

Original space: tall frosted windows in oxidized green metal frames, a low dark-teak chart table, one pale slatted instrument cabinet on the left rear wall, and restrained brass measuring equipment kept mostly in silhouette. Use different window proportions, furniture, character distances, and camera angle from the reference. The space is maintained, practical, and historically credible, not a Chinese civic residence and not a recognizable set.

Camera: asymmetric left-front / right-rear depth composition with different head spacing from the reference. Camera near chest-to-eye height and slightly farther to the side. Standard-to-light-telephoto perspective, moderate compression, shallow depth of field. The survey chief is sharp; the clerk remains readable but softly defocused. Architecture stays straight and coherent.

Light: bright neutral overcast coastal daylight enters behind and to the side through frosted windows, creating high environmental contrast and soft side-backlight. Use only believable wall and floor bounce to keep the chief's face and shirt readable. Windows glow warm cream-white with mild optical bloom; neither person becomes a silhouette. No cyan-blue cast.

Color result: warm peach-brown living skin, ivory-white shirt with pale rose-gray shadows, dense oxidized green, green-black and charcoal architecture, dark teak brown, and amber spectacles as a restrained accent. Natural

midtone density, clean readable darks, soft rolled highlights. No gray veil, muddy green wash, neon teal-orange grade, pastel commercial softness, or hard digital clipping.

Materials and realism: soft cotton or linen with a few broad natural folds; matte aged metal; restrained brass; frosted glass; maintained teak. Natural facial asymmetry, pores, hair, fabric gravity, plausible hands and arms, coherent eyewear reflections, subtle organic grain, and gentle optical softness.

Avoid: reference-image identities, its exact arrangement, any known scene, title, director, performer, character, costume, or prop; exact frame recreation; subtitles; text; pseudo-text; logos; watermark; player UI; modern objects; extra people; warped panes; malformed anatomy; wax skin; beauty retouching; fake HDR; hyper-detail; or generic AI concept-art polish. This is Round 01 test output, not a final artwork.

Round 01 · C | JW-LTBF-02_C_r01.png

Round 02

Janet : 颜色太清；人物发一点红、暖一点点；背景基本够。

唯一主动变量	只改脸、耳、颈、手的皮肤中间调。
阶段结果	仍偏青，面部红色不足。
生成边界	Round 01-03 为历史 reference/edit 链；Round 04 起为零图像输入独立原创生成。

原始 feedback.md

记录日期：2026-07-14

肉眼反馈

- 颜色太清。
- 原图角色还发一点红，需要再暖一点点。
- 背景颜色基本够了。

第二轮唯一变量

只调整人物可见皮肤区域：脸、耳、鼻、颈、手 / 前臂的 skin midtones 轻微加暖、加低饱和红润与自然色彩密度。

固定项

- 背景 WB、Tint、Exposure、Contrast、Saturation 和窗光颜色全部锁定。
- 白衣颜色、曝光、材质和褶皱锁定。
- 人物身份、脸、发型、胡须、眼镜、表情、姿态和手位锁定。
- 构图、空间、镜头、景深、光线方向、阴影位置和全部物体锁定。
- 不调整锐度、纹理、颗粒或 micro-contrast，避免把色彩反馈扩成第二个变量。

Round 02 • Prompt A

文件 : *round-02/prompt_A_internal.md* · SHA-256 :

Prompt A | 内部原片研究版 | Round 02

用途：基于 A 版第一轮结果做单变量色彩纠偏。内部研究，不公开发布。

本轮唯一修改

只调整人物可见皮肤区域的暖度、红润和色彩密度。背景、白衣及所有结构变量锁定。

Prompt

Use case: precise-object-edit

Asset type: Round 02 selective character-color correction test

Input images: Image 1 is `JW-LTBF-02\_A\_r01.png`, the edit target. Image 2 is the private master frame, used only to judge the target amount of skin warmth and muted redness. Do not import Image 2 geometry, facial features, text, or composition into Image 1.

Primary request: edit Image 1 only. Change only the visible skin color on the people: face, ears, nose, neck, and any visible hands or forearms. Compared with Round 01, shift the character skin midtones very slightly toward living peach-brown with a restrained muted rose-red / warm terracotta blood tone. The added redness should be most visible in the cheeks, ears, nose, neck, and hands. Keep highlights warm-neutral and keep skin shadows naturally brown. Make the skin color feel a little denser, warmer, and less clinically clean through subtle natural chroma variation only; keep skin luminance and texture unchanged.

Apply the correction most clearly to the right-foreground authority figure. Apply the same direction more softly to the defocused rear figure so depth remains believable.

Background color lock: keep the Round 01 olive-green, green-black, charcoal, dark-wood, and cream-window balance unchanged, including background exposure, contrast, saturation, white balance, tint, and highlight bloom. Do not apply a global warm grade. All color changes are selective to visible skin.

Strict invariants: preserve the exact character identities, faces, hair, facial hair, glasses, expressions, gaze, posture, bent arm, clothing, white-shirt color and exposure, folds, body proportions, composition, crop, camera angle, lens perspective, focus plane, depth of field, window geometry, louver, furniture, lighting direction, shadow placement, and every object from Image 1. Preserve current sharpness, texture, grain, and micro-contrast. Keep all non-skin areas unchanged as closely as possible.

Avoid: orange makeup, bright red makeup, magenta skin, sunburn, yellow-orange cast, globally warmer white balance, red or brown background shift, warmer windows, altered white shirt, altered lighting, altered exposure, face replacement, identity drift, changed pose, changed composition, added text, subtitles, logo, watermark, or any new object.

Prompt B | 描述性复刻版 | Round 02

用途：基于 B 版第一轮结果做单变量色彩纠偏。不得出现电影名、导演名、演员名或角色真实姓名。

本轮唯一修改

只调整人物可见皮肤区域的暖度、红润和色彩密度。背景、白衣及所有结构变量锁定。

Prompt

Use case: precise-object-edit

Asset type: Round 02 selective character-color correction test

Input images: Image 1 is `JW-LTBF-02\_B\_r01.png`, the edit target. Image 2 is a private color reference used only to judge restrained skin warmth and blood color. Do not copy Image 2 identities, faces, geometry, text, or composition.

Primary request: edit Image 1 only. Change only the visible skin color on the people: face, ears, nose, neck, and any visible hands or forearms. Compared with Round 01, make the skin midtones a small but clear step warmer and redder: muted peach-brown with restrained rose / brick-red blood color in the cheeks, ears, nose, neck, and hands. Keep highlights warm-neutral and keep skin shadows naturally brown. Increase selective skin color density just enough to remove the cool, pale, overly clean digital color through subtle natural chroma variation only; keep skin luminance and texture unchanged.

Apply the correction most clearly to the right-foreground authority figure. Apply the same direction more softly to the defocused rear figure so depth remains believable.

Background color lock: keep the Round 01 olive-green, green-black, charcoal, dark-wood, and cream-window balance unchanged, including background exposure, contrast, saturation, white balance, tint, and highlight bloom. Do not apply a global warm grade. All color changes are selective to visible skin.

Strict invariants: preserve the exact original faces created in Round 01, hair, facial hair, spectacles, expressions, gaze, posture, hand-on-waist pose, clothing, white-shirt color and exposure, folds, body proportions, composition, crop, camera angle, lens perspective, focus plane, depth of field, window geometry, louver, furniture, lighting direction, shadow placement, and every object from Image 1. Preserve current sharpness, texture, grain, and micro-contrast. Keep all non-skin areas unchanged as closely as possible. Do not move either face toward any known person or reference identity.

Avoid: orange makeup, bright red makeup, magenta skin, sunburn, yellow-orange cast, globally warmer white balance, red or brown background shift, warmer windows, altered white shirt, altered lighting, altered exposure, face replacement, identity drift, changed pose, changed composition, added text, subtitles, logo, watermark, or any new object.

Prompt C | 安全原创转译版 | Round 02

用途：基于 C 版第一轮结果做单变量色彩纠偏。人物、场景和叙事继续保持原创。

本轮唯一修改

只调整人物可见皮肤区域的暖度、红润和色彩密度。背景、白衣及所有结构变量锁定。

Prompt

Use case: precise-object-edit

Asset type: Round 02 selective character-color correction test

Input images: Image 1 is `JW-LTBF-02\_C\_r01.png`, the edit target. Image 2 is a private color reference used only to judge restrained skin warmth and muted redness. Do not copy Image 2 people, identities, faces, room, props, text, geometry, or composition.

Primary request: edit Image 1 only. Change only the visible skin color on the two original people: face, ears, nose, neck, and hands. Compared with Round 01, shift the skin midtones only slightly toward muted rose-red / warm umber within the existing peach-brown base. Reduce the current yellow-amber tendency without making the skin cool. Add restrained living blood color in the cheeks, ears, nose, neck, and hands. Keep highlights neutral-warm and keep skin shadows naturally brown. Make the skin color a little denser and less clinically clean through subtle natural chroma variation only; keep skin luminance and texture unchanged.

Apply the correction most clearly to the left-foreground survey chief. Apply the same direction more softly to the defocused right-rear clerk so depth remains believable.

Background color lock: keep the Round 01 oxidized olive-green, green-black, charcoal, dark-teak, brass, and cream-window balance unchanged, including background exposure, contrast, saturation, white balance, tint, and highlight bloom. Do not apply a global warm grade. All color changes are selective to visible skin.

Strict invariants: preserve the two original identities from Round 01, faces, age cues, hair, clean-shaven state, amber spectacles, expressions, gaze, posture, hand positions, clothing, ivory-shirt color and exposure, folds, body proportions, left-front / right-rear composition, crop, camera angle, lens perspective, focus plane, depth of field, frosted-window geometry, instrument cabinet, chart table, brass equipment, lighting direction, shadow placement, and every object from Image 1. Preserve current sharpness, texture, grain, and micro-contrast. Keep all non-skin areas unchanged as closely as possible. Do not move either face toward any performer, public figure, existing character, or reference identity.

Avoid: orange makeup, bright red makeup, magenta skin, sunburn, stronger yellow-amber skin, globally warmer white balance, red or brown background shift, warmer windows, altered ivory shirt, altered lighting, altered exposure, face replacement, identity drift, changed pose, changed composition, added text, subtitles, logo, watermark, or any new object.

Round 02 · C | JW-LTBF-02_C_r02.png

Round 03

Janet : A/B/C 都要增加红色权重，尤其是面部。

唯一主动变量	提高皮肤红色感知梯度，非皮肤锁定。
阶段结果	A 被发现是原片 edit 改色，方法无效；B 最接近但略红。
生成边界	Round 01-03 为历史 reference/edit 链；Round 04 起为零图像输入独立原创生成。
警告	A 只保留为错误方法证据，不能作为后续图像输入。

原始 feedback.md

记录日期：2026-07-15

肉眼反馈

- 颜色依旧偏青。
- 对比原图，角色面部缺少红色系。
- 需要提高红色在整个画面中的视觉权重，尤其是面部。
- A / B / C 三版都必须加入这一校正。

第三轮调整变量

- 第一优先：人物面部 skin midtones 明确增加低饱和 rose-red / brick-red / blood-color 权重，削弱青绿感。
- 第二优先：耳、鼻、眼周、颧部、颈部、手部同步增加较弱的自然红润层次。
- 全画面的红色视觉权重只通过人物皮肤面积提高，不改眼镜、木器、家具或背景材质颜色。

固定项

- 人物身份、五官、年龄、发型、胡须、眼镜、表情、视线、姿态和手位锁定。
- 构图、裁切、摄影机位置、焦段感、景深、空间、灯位、阴影和全部物体锁定。

- 白衣、眼镜和窗光保持原色，不得染粉、染橙或变黄。
- 背景原有 olive-green、green-black、charcoal 层级锁定，不做整体暖色滤镜。
- Exposure、Contrast、明暗结构、清晰度、皮肤纹理、颗粒与 micro-contrast 锁定。

禁止误读

- 不是增加橙黄。
- 不是全局提高色温。
- 不是红色妆感、晒伤或 magenta skin。
- 不是改人物、改空间或重新生成构图。

Round 03 • Prompt A | 无效历史链

文件 : *round-03/prompt_A_internal.md* · SHA-256 :

f91a5588b776446e54d8256c9a0c2da481e2b6056395ed84cd8eb25e693a8dbf

Prompt A | 内部原片研究版 | Round 03

用途：基于 A 版第二轮结果做单变量红色权重纠偏。内部研究，不公开发布。

本轮唯一修改

只调整人物可见皮肤区域中的 red / cyan-green 比例与红色密度。面部优先；背景、白衣、眼镜及所有结构变量锁定。

Prompt

Use case: precise-object-edit

Asset type: Round 03 selective character red-weight correction test

Input images: Image 1 is `JW-LTBF-02\_A\_r02.png`, the edit target. Image 2 is the private source master frame, used only to judge the target copper-red facial color density. Do not import Image 2 geometry, identity, facial features, clothing, text, or composition into Image 1.

Primary request: edit Image 1 only. Apply a clearly visible selective color correction to every visible skin region, with the strongest priority on both faces. Increase the red-channel contribution and muted red chroma across the broad facial midtones until the faces read unmistakably warmer and redder at normal viewing size. Reduce cyan-green contamination inside the skin regions only. This correction must be clearly stronger than Round 02.

A-specific correction strength: on the right-foreground figure, increase the existing skin red-chroma presence by approximately 25% relative to Image 1 across the facial midtones, ears, nose, jaw, neck, and open-collar chest skin. On the defocused rear figure, apply the same direction at approximately 15%. On visible hands or forearms, apply approximately 12%. A already contains warm brown, so add muted copper-red / brick-rose / warm red-brown blood color rather than more yellow or orange. Match the master frame's broad copper-red facial color density, not merely its warmth.

Distribute the red-brown blood color anatomically across the forehead midtones, temples, under-eye area, full cheeks, nose bridge and nostrils, ears, jaw, neck, and visible hands. Make the cheeks, ears, nose, and neck the strongest red anchors, while keeping continuous red presence across the rest of the facial midtones. Do not render isolated blush, makeup, or a uniform red mask. Keep skin highlights neutral-warm and keep skin shadows naturally reddish-brown. Preserve skin luminance, highlight placement, shadow structure, pores, wrinkles, sharpness, grain, and micro-contrast.

Frame red-weight rule: increase the picture's red visual weight through the enlarged red presence in skin only. Treat every non-skin pixel as locked.

Background and neutral lock: preserve the exact olive-green, green-black, charcoal, dark-wood, and cream-window balance from Image 1. Preserve background exposure, contrast, saturation, WB, Tint, and highlight bloom. Keep the white shirt neutral ivory with identical luminance, folds, shadows, and material color. Do not apply a global warm grade or global red tint.

Strict invariants: preserve the exact identities, facial geometry, age, hair, facial hair, glasses and lens color, expressions, gaze, posture, bent arm, hands, clothing, body proportions, composition, crop, camera angle, lens perspective, focus plane, depth of field, window geometry, louver, furniture, lighting direction, shadow placement, and every object from Image 1. Keep all non-skin areas unchanged as closely as possible.

Avoid: pale beige skin, neutral tan skin, olive skin, cyan skin, gray skin, clinically clean skin, orange skin, yellow-orange cast, bright red makeup, magenta skin, sunburn, alcohol flush, isolated cheek blush, globally warmer white balance, global red tint, pink or yellow white shirt, warmer windows, red or brown background shift, changed exposure, changed lighting, face replacement, identity drift, changed pose, changed composition, added text, subtitles, logo, watermark, or any new object.

Prompt B | 描述性复刻版 | Round 03

用途：基于 B 版第二轮结果做单变量红色权重纠偏。不得出现电影名、导演名、演员名或角色真实姓名。

本轮唯一修改

只调整人物可见皮肤区域中的 red / cyan-green 比例与红色密度。面部优先；背景、白衣、眼镜及所有结构变量锁定。

Prompt

Use case: precise-object-edit

Asset type: Round 03 selective character red-weight correction test

Input images: Image 1 is `JW-LTBF-02\_B\_r02.png`, the edit target. Image 2 is a private color reference used only to judge the target amount and distribution of facial red-brown blood color. Do not copy Image 2 identities, faces, geometry, clothing, text, or composition.

Primary request: edit Image 1 only. Apply a clearly visible selective color correction to every visible skin region, with the strongest priority on both faces. Increase the red-channel contribution and muted red chroma across the broad facial midtones until the faces read unmistakably warmer and redder at normal viewing size. Reduce cyan-green contamination inside the skin regions only. This correction must be clearly stronger than Round 02.

B-specific correction strength: this is the coldest and grayest of the three tests, so it requires the strongest red correction. On the right-foreground dominant man, increase the existing skin red-chroma presence by approximately 35–40% relative to Image 1 across the facial midtones, ears, nose, jaw, neck, and open-collar chest skin, while reducing the cyan-green influence inside those skin regions by approximately 15%. On the defocused rear man, apply the same direction at approximately 22–25%. On visible hands or forearms, apply approximately 15%. Shift the current gray-beige skin toward muted brick-red / warm rose-brown / natural red-brown blood color. The red presence on the foreground face must be unambiguous, not a barely perceptible warm shift.

Distribute the red-brown blood color anatomically across the forehead midtones, temples, under-eye area, full cheeks, nose bridge and nostrils, ears, jaw, neck, and visible hands. Make the cheeks, ears, nose, and neck the strongest red anchors, while keeping continuous red presence across the rest of the facial midtones. Do not render isolated blush, makeup, or a uniform red mask. Keep skin highlights neutral-warm and keep skin shadows naturally reddish-brown. Preserve skin luminance, highlight placement, shadow structure, pores, wrinkles, sharpness, grain, and micro-contrast.

Frame red-weight rule: increase the picture's red visual weight through the enlarged red presence in skin only. Treat every non-skin pixel as locked.

Background and neutral lock: preserve the exact olive-green, green-black, charcoal, dark-wood, and cream-window balance from Image 1. Preserve background exposure, contrast, saturation, WB, Tint, and highlight bloom. Keep the white shirt neutral ivory with identical luminance, folds, shadows, and material color. Do not apply a global warm grade or global red tint.

Strict invariants: preserve the exact original identities created in Image 1, facial geometry, age, hair, facial hair, spectacles and lens color, expressions, gaze, posture, hand-on-waist pose, hands, clothing, body proportions, composition, crop, camera angle, lens perspective, focus plane, depth of field, window geometry, louver, furniture, lighting direction, shadow placement, and every object from Image 1. Keep all non-skin areas unchanged as closely as possible. Do not move either face toward any known person or reference identity.

Avoid: pale beige skin, neutral tan skin, olive skin, cyan skin, gray skin, clinically clean skin, orange skin, yellow-orange cast, bright red makeup, magenta skin, sunburn, alcohol flush, isolated cheek blush, globally warmer white balance, global red tint, pink or yellow white shirt, warmer windows, red or brown background shift, changed exposure, changed lighting, face replacement, identity drift, changed pose, changed composition, added text, subtitles, logo, watermark, or any new object.

Prompt C | 安全原创转译版 | Round 03

用途：基于 C 版第二轮结果做单变量红色权重纠偏。人物、场景和叙事继续保持原创。

本轮唯一修改

只调整两名原创人物可见皮肤区域中的 red / cyan-green / yellow-amber 比例与红色密度。面部优先；原创背景、白衣、眼镜及所有结构变量锁定。

Prompt

Use case: precise-object-edit

Asset type: Round 03 selective character red-weight correction test

Input images: Image 1 is `JW-LTBF-02\_C\_r02.png`, the edit target. Image 2 is a private color reference used only to judge the target amount and anatomical distribution of facial red-brown blood color. Do not copy Image 2 people, identities, faces, room, props, clothing, text, geometry, or composition.

Primary request: edit Image 1 only. Apply a clearly visible selective color correction to every visible skin region on the two original people, with the strongest priority on both faces. Increase the red-channel contribution and muted red chroma across the broad facial midtones until the faces read unmistakably warmer and redder at normal viewing size. Reduce cyan-green contamination inside the skin regions only. This correction must be clearly stronger than Round 02.

C-specific correction strength: on the left-foreground original survey chief, increase the existing skin red-chroma presence by approximately 30% relative to Image 1 across the facial midtones, ears, nose, jaw, neck, and open-collar chest skin. On the defocused right-rear original clerk, apply the same direction at approximately 18–20%. On visible hands or forearms, apply approximately 15%. Replace the current olive-cyan and gray-yellow skin bias with a visible muted rose-red / brick-red / warm reddish-umber bias without increasing yellow or amber. Do not solve this by merely raising color temperature.

Distribute the red-brown blood color anatomically across the forehead midtones, temples, under-eye area, full cheeks, nose bridge and nostrils, ears, jaw, neck, and visible hands. Make the cheeks, ears, nose, and neck the strongest red anchors, while keeping continuous red presence across the rest of the facial midtones. Do not render isolated blush, makeup, or a uniform red mask. Keep skin highlights neutral-warm without additional yellow, and keep skin shadows naturally reddish-brown. Preserve skin luminance, highlight placement, shadow structure, pores, wrinkles, sharpness, grain, and micro-contrast.

Frame red-weight rule: increase the picture's red visual weight through the enlarged red presence in skin only. Treat every non-skin pixel as locked.

Background and neutral lock: preserve the exact oxidized olive-green, green-black, charcoal, dark-teak, brass, and cream-window balance from Image 1. Preserve background exposure, contrast, saturation, WB, Tint, and highlight bloom. Keep the ivory shirt at its current neutral color with identical luminance, folds, shadows, and material. Keep the amber glasses unchanged. Do not apply a global warm grade or global red tint.

Strict invariants: preserve the two original identities from Image 1, facial geometry, age cues, hair, clean-shaven state, amber spectacles and lens color, expressions, gaze, posture, hand positions, clothing, body proportions, left-front / right-rear composition, crop, camera angle, lens perspective, focus plane, depth of field, frosted-window geometry, instrument cabinet, chart table, brass equipment, lighting direction, shadow placement, and every object from Image 1. Preserve the original hydrographic-survey room and its original narrative. Keep all non-skin areas unchanged as closely as possible. Do not move either face toward any performer, public figure, existing character, or reference identity.

Avoid: pale beige skin, neutral tan skin, olive skin, cyan skin, gray skin, clinically clean skin, stronger yellow or amber skin, orange skin, yellow-orange cast, bright red makeup, magenta skin, sunburn, alcohol flush, isolated cheek blush, globally warmer white balance, global red tint, pink or yellow ivory shirt, warmer windows, red or brown background shift, changed exposure, changed lighting, face replacement, identity drift, changed pose, changed composition, added text, subtitles, logo, watermark, or any new object.

Round 03 · C | JW-LTBF-02_C_r03.png

Round 04

Janet：禁止原图转色；角色必须原创；B 稍降红并轻微发青。

唯一主动变量	零图像输入、三次独立原创 text-to-image。
阶段结果	原创断链成功，但 cyan-olive 把皮肤推得过青。
生成边界	Round 01-03 为历史 reference/edit 链；Round 04 起为零图像输入独立原创生成。

原始 feedback.md

记录日期：2026-07-15

肉眼与方法反馈

- Round 03 的 A 图本质上仍是原片人物与构图的改色结果，不是合格的原创生成。
- A 图此前一直比 B / C 偏红，是因为它沿用了原片 edit 链，不应继续作为测试母图。
- 不允许用原片角色换色充当新图；角色必须原创，避免侵权风险。
- A / B / C 必须使用不同生成参数和不同原创身份设计，不能只改颜色。
- B 图的颜色最接近目标，但仍略偏红；下一轮略降红色，并让人物肤色轻微发青。

Round 03 判定

- A：方法无效，废弃其图像输入链；不得进入下一轮 edit。
- B：只保留肉眼色彩结论，不保留图片、角色、构图或像素作为生成输入。
- C：只保留流程经验，不保留图片、角色、构图或像素作为生成输入。

Round 04 方法重置

- A / B / C 全部使用 text-to-image，从零生成。
- imagegen 调用不得提供 `referenced\_image\_paths`。
- 不上传、不引用原片、Round 01、Round 02 或 Round 03 的任何图片。
- 三版人物、空间和叙事均原创；不复制任何现有电影角色、演员、公众人物或可识别构图。

- 只保留抽象视觉规律：白衣主角、暗绿室内、窗光、前后两人、浅景深、低饱和年代电影质感。

本轮色彩方向

- 以 B 图的肉眼印象为文字基准，不使用 B 图作为视觉参考。
- 降低面部 muted red / brick-red 权重，去除明显红脸。
- 在皮肤中间调和阴影侧加入极轻的 cyan-olive 平衡，使肤色微微发青但仍像活人。
- 白衣保持中性象牙白，背景保持暗 olive-green / green-black，不做全局 cyan 滤镜。

禁止

- 原片转色、旧图 edit、身份保留、face replacement 或 reference identity transfer。
- 复刻原角色的脸型、发型、胡须、圆形有色眼镜、标志性姿态或服装细节组合。
- 只换脸不换角色设计。
- 红脸、醉酒感、晒伤、腮红妆、橙黄肤色。
- 蓝青病态肤色、全局青色滤镜、白衣染青或窗光染青。

qa.md

断链检查

- 三张均为独立 text-to-image 结果。
- 实际生成调用未传入 `referenced\_image\_paths` 或 `num\_last\_images\_to\_include`。
- 未见旧图人物、圆形有色眼镜、山羊胡、手抵腰、旧窗型或旧空间整体指纹。
- 仅凭肉眼不能证明与所有公众人物绝对无相似，但未发现明显可识别 likeness。

A

- 判定：PASS。
- 原创女性主管、卷发男性助理与种子档案空间成立。
- 双手持种子袋，无扶腰姿态；人物、空间、blocking 与旧图断开。
- 三版中最暖，但没有明显红脸；皮肤带轻 olive。

B

- 判定：PASS，本轮中心判断图。
- 原创男性维修员、女性技师、真空管和无线电空间成立。
- 无圆镜、胡须和扶腰；人物与旧角色无明显近似。
- 相比前轮 B 的肉眼印象，红橙明显降低，面部中间调带极轻 beige-olive / cyan-gray；白衣与窗光未染青。

C

- 判定：PASS，偏青边界图。
- 原创银发女性修复师、长发男性助理与纺织修复空间成立。
- 三版中最冷，皮肤接近 beige-gray / olive，但未达到病青或尸灰。

结论

- 不需要因旧角色、原片换色或整体指纹问题重生成。
- A / B / C 的人物、动作、空间、窗型、道具、blocking、焦段和青红参数差异明确。
- 三张仍为观察样本，不代表通过或冻结。

Prompt A | 内部视觉研究版 | Round 04

用途：方法重置后的原创 text-to-image 测试。内部研究可以继承抽象视觉规律，但不得继承任何原片人物、身份、像素或构图。

生成参数

- 生成方式：brand-new text-to-image
- 图像输入：无
- 人物：原创女性主管 + 原创男性助理
- 场景：原创地方种子档案室
- Blocking：左前 / 右后
- 焦距倾向：58mm
- 皮肤青红边界：cyan-olive 2-3%，三版中保留红色最多，但不得红脸

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 04 A, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Primary request: create an entirely original period interior with two newly designed East Asian people. A 42-year-old woman stands in the left foreground, dominant in frame, examining an opened paper seed envelope with both hands at chest level. She has a broad oval face, short straight side-parted hair tucked behind one ear, no eyewear, and wears a worn collarless ivory-white cotton work shirt. In the right rear, a 28-year-old man with a narrow face, dense natural curls, no facial hair, and a dark brown utility vest checks a metal specimen drawer. Their original narrative is an inspection of water-damaged seed stock after a roof leak.

Scene/backdrop: an original regional seed archive with rough dark moss-green plaster walls, charcoal-gray metal sample drawers, hanging cotton seed sacks, a dark wood sorting bench, and one narrow vertical wired-frosted window on the left. No venetian blinds. The room must have its own functional geometry and must not resemble a known film set.

Composition/framing: 2.35:1 cinematic frame, medium close shot, foreground woman on the left, rear man smaller on the right, 58mm lens tendency, eye-level camera around 1.45m, natural shallow depth of field. The woman uses both hands on the seed envelope; no hand touches the waist. Use an observational composition with imperfect asymmetry.

Lighting/mood: soft cream window light from the left rear, gentle facial modeling, moderate-low contrast, green-black ambient shadows, quiet procedural tension.

Color palette: dark oxidized olive, green-black, charcoal, dark wood, and dim cream-window light. Use low-saturation living peach-beige skin with a faint cyan-olive bias across facial midtones and shadow-facing planes, approximately a 2–3% visual influence. Red chroma stays low and diffuse; retain only a small dusty brick-red blood trace in the ears, nostrils, inner cheeks, and lower lip. No visible red flush. Skin highlights remain neutral-warm cream and shadows remain subdued brown-green. Do not cool the white shirt, window light, or the whole frame.

Materials/textures: worn cotton fibers, imperfect plaster, oxidized metal, natural pores, age detail, fine photochemical grain, mild highlight halation, restrained optical softness, no beauty retouching.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. Their faces, hairstyles, bodies, garments, gestures, props, room, and story must be original.

Avoid: copied faces, copied room geometry, copied composition, round sunglasses, tinted round lenses, moustache, goatee, hand on waist, arm akimbo, jutting elbow, white deep-open collar, global cyan grade, teal or turquoise skin, excessive red face, red-brown face, magenta blush, orange skin, bloodless gray skin, pink or cyan white shirt, fashion photography, HDR, waxy skin, plastic texture, excessive digital clarity, subtitles, text, logo, or watermark.

Prompt B | 描述性原创生成版 | Round 04

用途：以 Janet 认为最接近的 B 色彩印象为文字中心值，略降红、微加青；不得出现电影名、导演名、演员名或角色真实姓名，不得使用任何图片输入。

生成参数

- 生成方式：brand-new text-to-image
- 图像输入：无
- 人物：原创男性维修员 + 原创女性技师
- 场景：原创山地无线电维修间
- Blocking：右中前 / 左后
- 焦段倾向：65mm
- 皮肤青红中心值：cyan-olive 约 4%，红色低于 A

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 04 B, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Primary request: create an entirely original cinematic frame inside a mountain radio maintenance room. In the right-center foreground stands a newly invented 36-year-old East Asian man with a rectangular face, high forehead, short clean side-parted hair, no facial hair, and no eyewear. He wears a loose aged ivory-white linen field shirt with a soft band collar, fastened high enough to avoid a deep open neckline. One hand holds a burned vacuum tube at lower chest height while his other arm hangs naturally. In the left rear, a newly invented 52-year-old East Asian woman with a silver-streaked low bun and a charcoal utility apron adjusts a radio dial. Their original narrative is the diagnosis of a failed transmitter after a nighttime signal interruption.

Scene/backdrop: a distinct mountain radio workshop with dark olive acoustic wall panels, stacked black bakelite radio cabinets, copper-wire spools, a narrow repair bench, and a high horizontal ribbed-glass window. No blinds. The window form, furniture layout, and room geometry must be newly designed.

Composition/framing: 2.35:1 compressed medium close framing, 65mm lens tendency, camera slightly below eye level around 1.35m, foreground man right of center, rear woman left and softly defocused. Maintain a clear front-back relationship without recreating a known shot. The man's hands stay away from his waist.

Lighting/mood: soft directional cream window light entering from the upper left, subdued fill, moderate-low contrast, green-black room shadows, quiet post-crisis concentration.

Color palette: this is the center target. Use deep oxidized olive, green-black, charcoal, dark teak, black bakelite, and subdued cream highlights. Skin is low-saturation living peach-beige with visibly reduced muted red and brick-red

density. Add approximately 4% very faint cyan-olive influence only inside broad facial midtones and shadow-facing planes, creating a slightly cool peach-brown complexion rather than a red-brown complexion. Retain only a low-density rust-red blood trace in the ears, nostrils, inner cheeks, and lips so the skin remains alive. Highlights stay neutral-warm cream; midtones carry the faint cyan-olive balance; shadows stay brown-green. No red flush. Do not apply cyan globally, and keep the ivory-white garment, window light, and olive-green background free of cyan contamination.

Materials/textures: natural pores, uneven age detail, linen weave, oxidized brass, dusty bakelite, restrained 35mm grain, mild halation, slight optical softness, no clinical digital cleanliness.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. All facial proportions, hair, costume, gestures, props, room geometry, and story must be original.

Avoid: copied faces or frames, round eyewear, tinted lenses, moustache, goatee, beard, hand on hip, arm akimbo, deep open white shirt, copied facial structure, copied pose, global cool grade, turquoise skin, strong green face, excessive red or flushed skin, orange warmth, magenta cheeks, bloodless gray skin, pink or blue white shirt, hyper-sharp digital detail, HDR, smooth AI skin, beauty retouching, subtitles, text, logo, or watermark.

- 皮肤青红边界：cyan-olive 6–7%，三版中红色最低，但不得病青

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 04 C, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Primary request: create an original cinematic scene in a municipal textile conservation studio. A newly invented 56-year-old East Asian woman occupies the center-left foreground. She has an angular face, short silver-gray pixie hair, no eyewear, and wears a worn ivory-white conservation smock with a high soft neckline. She holds a faded textile strip between both hands and examines its fibers. In the right rear, a newly invented 24-year-old East Asian man with shoulder-length hair tied in a low ponytail, no facial hair, and a dark forest-green shirt operates a small brass sample press. Their original narrative is a final inspection of an archive fabric that was dyed incorrectly before the studio closes.

Scene/backdrop: rough dark olive walls, vertical racks of rolled fabric, charcoal storage trays, brass sample clips, a deep walnut work surface, and a small square frosted skylight high on the right. No venetian blinds, radio equipment, seed drawers, or borrowed set architecture.

Composition/framing: 2.35:1 cinematic frame, 50mm lens tendency, camera slightly above eye level around 1.52m, foreground woman center-left, rear man right, more visible room depth than A or B, natural shallow focus without extreme bokeh. Both foreground hands remain engaged with the textile and away from the waist.

Lighting/mood: soft cream skylight from the upper right, delicate falloff across the foreground face, low-key green-black ambient shadows, restrained observational mood.

Color palette: oxidized dark olive, green-black, charcoal, dark walnut, tarnished brass, and dim cream light. This is the cooler boundary test. Use low-chroma cool peach-olive skin with approximately 6–7% muted cyan-green influence confined to facial and hand midtones. Red is the lowest of the three versions: preserve only a very faint

dusty brick-red trace in the ears, nose wings, lower cheeks, and lips. Highlights remain neutral ivory, midtones carry a mild cool peach-olive bias, and shadows remain subdued green-brown. The skin must stay alive and human, never turquoise, corpse-gray, or sickly. The global frame must not become cyan, and the white smock must remain neutral ivory.

Materials/textures: visible cotton-smock wear, fabric fibers, aged plaster, tarnished brass, natural pores and age lines, fine 35mm grain, gentle halation, mild optical softness, low digital micro-contrast.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. Every identity, face, body, garment, gesture, object, room, and narrative element must be original.

Avoid: image recoloring, copied composition, copied hairstyle, copied room layout, round sunglasses, colored round lenses, moustache, goatee, hand on waist, arm akimbo, crossed arms, deep open white shirt, red face, ruddy flush, magenta blush, orange skin, strong teal or cyan skin, corpse-gray skin, global cyan cast, cyan shadows on the shirt, glossy fashion lighting, HDR, excessive clarity, waxy skin, symmetrical AI face, subtitles, text, logo, or watermark.

Round 04 · C | JW-LTBF-02_C_r04.png

Round 05

Janet：参考同场正面和侧面两帧，从不同角度分析色彩。

唯一主动变量	青绿限背景；肤色建立 A<B<C 红棕感知梯度。
阶段结果	梯度成立；初版 C 被道具抢红后重生。
生成边界	零图像输入、独立 text-to-image；不使用旧图做 edit target。

原始 feedback.md

记录日期：2026-07-15

肉眼反馈

- Round 04 的人物色彩太青。
- 需要同时参考同一段落的正面与侧面两个角度，重新判断皮肤、白衣、窗光和背景之间的色彩关系。

色彩参考

- 正面角度：``../../frames/让子弹飞/02_candidate_frames_ab/JW_002_goose_town_2000_a.jpg``
- 侧面角度：``../../frames/让子弹飞/02_candidate_frames_ab/JW_002_goose_town_2000_b.jpg``

两张图只用于离线人工色彩分析，不作为 imagegen 输入，不向生成器提供人物、像素、身份或构图。

Round 04 偏青根因

- A / B / C 都把 `cyan-olive` 明确写进了广域皮肤中间调。
- 绿色房间占画面面积很大，生成器又把环境绿反射扩散到人物皮肤。

- 红色被压缩为耳、鼻、唇的小面积 trace，无法形成参考图里连续的 peach / rose / terracotta 活人血色。
- 白衣和窗光的 warm ivory / cream 锚点写得不够强，人物与绿黑背景没有拉开。

Round 05 唯一调整变量

- 从人物皮肤中间调彻底移除 cyan / teal / cyan-green / olive 倾向。
- 肤色改为 living peach-beige / peach-brown，加入低饱和 dusty rose-brown、brick-red 和 muted terracotta 血色。
- 人物皮肤阴影保持 warm neutral brown；只有非皮肤背景保留 olive / green-black。
- A / B / C 通过红色色度强度形成三档，不再通过青色强度形成三档。
- 白衣保持 neutral-warm ivory，窗光保持 cream / creamy off-white。

生成与原创边界

- 继续使用三次独立 text-to-image。
- 不传入两张参考原片、Round 04 图片或任何旧图。
- 不 edit、不 recolor、不做 identity transfer。
- A / B / C 的人物、场景、blocking、焦段、机位、手势、材质、曝光、对比度、景深和原创身份设计保持 Round 04 的文字规格不变。

reference-color-analysis.md

分析边界

以下调色判断均为：根据画面结果推测。

不把视觉判断伪装成真实 Resolve 参数，也不从字幕、角色身份或文件名推导色彩事实。

参考 A | 正面角度

根据画面结果推测：

- 皮肤高光：柔和 cream-peach，不是冷白。

- 皮肤中间调：低饱和 peach-beige，连续混有 muted terracotta 与 dusty rose-brown。
- 红色分布：不仅在耳鼻，额头、太阳穴、面颊、下颌和颈部也有低密度连续血色。
- 皮肤阴影：warm umber / neutral brown，不是 cyan-gray。
- 白衣：warm ivory；褶皱带很淡的 peach-beige，不青不蓝。
- 窗光：cream-yellow / creamy off-white，是画面的暖锚点。
- 背景：deep olive / green-black / charcoal；青绿主要停留在空间暗部。

参考 B | 侧面角度

根据画面结果推测：

- 皮肤高光：斜侧光下更接近 golden cream。
- 皮肤中间调：peach-brown 与 copper / terracotta 的明暗交界更清楚。
- 红色分布：耳、太阳穴、鼻翼、颊侧、颈侧的 muted brick-red 比正面更集中。
- 皮肤阴影：仍是 warm brown / olive-brown，没有变成 cyan-olive 皮肤。
- 白衣：继续保持 warm ivory，亮部奶油化，暗褶偏 neutral beige。
- 窗光：依然是 cream-yellow / warm off-white。
- 背景：deep olive / green-black；人物的暖色与背景的绿黑保持分离。

两角度共同规律

根据画面结果推测：

- 换角度后人物皮肤仍偏暖，说明 warm peach / rose / terracotta 是稳定的肤色关系，不是单一角度的偶然反光。
- 绿色属于背景大色块和最深环境暗部，不属于广域面部中间调。
- 冷暖关系不是“全画面偏绿”，而是“暖人物 + 暖白衣 / 窗光”从“绿黑背景”中分离。
- 皮肤不能只靠耳鼻唇的红点维持活人感；低密度红棕必须连续铺在面部、颈部和手部中间调。

Round 05 三档边界

以下百分比只作为 Prompt 感知强度标尺，不是真实 Resolve 参数。

- A 克制端：皮肤 cyan / olive = 0；dusty rose / terracotta 约 4–5%。
- B 中心值：皮肤 cyan / olive = 0；muted brick-red / rose-brown 约 7–8%。
- C 偏红边界：皮肤 cyan / olive = 0；muted terracotta / dusty brick-red 约 10–11%。

三档共同锁定：背景 olive / green-black、白衣 neutral-warm ivory、窗光 creamy off-white；不做 global warm grade，也不改变 Exposure、Contrast、Saturation、WB 或 Tint。

qa.md

A

- 判定：PASS。
- 肤色已移除 Round 04 的 cyan / olive 中间调，恢复克制 peach-beige。
- 额头、面颊、鼻翼、耳、唇和双手有连续低密度 dusty rose / terracotta。
- 白衣为 aged warm ivory，人物与 moss-green / green-black 背景分离。
- 对应三档中的 4–5% 克制端。

B

- 判定：PASS，本轮中心值。
- 面部宽域中间调为 peach-brown + muted brick / rose，红棕强度高于 A，但无红脸、橙脸或妆感。
- 白衣与窗光形成 warm ivory / creamy off-white 锚点；绿黑只留在空间。
- 对应三档中的 7–8% 中心值。

c 初次生成

- 判定：REJECTED，已保留为 `JW-LTBF-02\_C\_r05\_rejected-01.png`。
- 去青成功，但脸部红棕不高于 B，未形成 `A < B < C`。
- 10–11% 红色权重主要被织物和木头占用，人物脸和手仍偏灰收。
- 右上窗过于横向，不符合小方形天窗规格。
- 使用的初版 Prompt：`prompt\_C\_safe\_initial.md`。

C 重生

- 判定：PASS，保留为 canonical `JW-LTBF-02\_C\_r05.png`。
- 低饱和 peach-brown / muted terracotta 明显高于 B，但仍无红脸、腮红块、醉红或橙黄。
- 红色正确落在脸与双手；织物为低色灰褐，不再代偿人物红色。
- 肤色无 cyan / teal / gray-green；皮肤阴影为 warm neutral brown。
- 白衣为 neutral-warm ivory，小方窗为 cream-white，背景保持 dark olive / green-black。
- 右上小方形天窗成立。

最终结论

- `A < B < C` 的人物低饱和红棕梯度成立。
- 三张人物肤色均已从 Round 04 的偏青方向拉回。
- 三张继续保持独立 text-to-image 和原创身份 / 场景断链。
- 三张仍为观察样本，不代表通过或冻结。

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 05 A, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Generation isolation: use no input image, visual reference, previous output, identity transfer, face transfer, or image recoloring. The two source stills were used only for offline human color analysis and must not be supplied to the generator.

Color-only test boundary: keep every non-color specification unchanged, including role, age, gender, face-shape description, hairstyle, garment cut, gesture, prop, room design, blocking, crop, lens tendency, camera height, lighting direction, exposure, contrast, depth of field, materials, grain, halation, and optical softness. Invent a fresh original face within the same written character specification; do not reproduce any earlier face.

Primary request: create an entirely original period interior with two newly designed East Asian people. A 42-year-old woman stands in the left foreground, dominant in frame, examining an opened paper seed envelope with both hands at chest level. She has a broad oval face, short straight side-parted hair tucked behind one ear, no eyewear, and wears a worn collarless ivory-white cotton work shirt. In the right rear, a 28-year-old man with a narrow face, dense natural curls, no facial hair, and a dark brown utility vest checks a metal specimen drawer. Their original narrative is an inspection of water-damaged seed stock after a roof leak.

Scene/backdrop: an original regional seed archive with rough dark moss-green plaster walls, charcoal-gray metal sample drawers, hanging cotton seed sacks, a dark wood sorting bench, and one narrow vertical wired-frosted window on the left. No venetian blinds. The room must have its own functional geometry and must not resemble a known film set.

Composition/framing: 2.35:1 cinematic frame, medium close shot, foreground woman on the left, rear man smaller on the right, 58mm lens tendency, eye-level camera around 1.45m, natural shallow depth of field. The woman uses both hands on the seed envelope; no hand touches the waist. Use an observational composition with imperfect asymmetry.

Lighting/mood: soft cream window light from the left rear, gentle facial modeling, moderate-low contrast, green-black ambient shadows, quiet procedural tension.

Color palette: deep oxidized olive, green-black, charcoal, dark wood, and subdued creamy highlights. Skin is low-saturation living neutral peach-beige, never cool, cyan, green-gray, or olive. Use a conservative diffuse layer of dusty rose-brown and muted terracotta blood warmth across the broad facial and hand midtones, approximately a 4–5% perceptual chroma influence. Keep the strongest natural red anchors in the ears, nose wings, inner cheeks, and lower lip, with a faint continuous presence across the forehead, temples, jaw, neck, and visible hands. Highlights stay pale warm cream; skin shadows stay warm neutral brown. No visible flush. Keep the white shirt aged warm ivory with faint peach-beige folds and keep the window light cream-yellow. Green belongs only to the room and other non-skin areas. Do not apply a global warm grade, global red tint, or overall WB, Tint, or Saturation shift.

Materials/textures: worn cotton fibers, imperfect plaster, oxidized metal, natural pores, age detail, fine photochemical grain, mild highlight halation, restrained optical softness, no beauty retouching.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. Their faces, hairstyles, bodies, garments, gestures, props, room, and story must be original.

Avoid: copied faces, copied room geometry, copied composition, round sunglasses, tinted round lenses, moustache, goatee, hand on waist, arm akimbo, jutting elbow, white deep-open collar, cyan-olive skin, teal skin, green facial midtones, gray-green complexion, corpse-gray skin, excessive red face, magenta blush, orange or yellow skin, isolated cheek blush, makeup, sunburn, alcohol flush, uniform red mask, global cyan grade, global warm filter, global red tint, shifted background olive, orange wood, pink, yellow, or cyan white shirt, warmer window light, fashion photography, HDR, waxy skin, plastic texture, excessive digital clarity, subtitles, text, logo, or watermark.

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 05 B, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Generation isolation: use no input image, visual reference, previous output, identity transfer, face transfer, or image recoloring. The two source stills were used only for offline human color analysis and must not be supplied to the generator.

Color-only test boundary: keep every non-color specification unchanged, including role, age, gender, face-shape description, hairstyle, garment cut, gesture, prop, room design, blocking, crop, lens tendency, camera height, lighting direction, exposure, contrast, depth of field, materials, grain, halation, and optical softness. Invent a fresh original face within the same written character specification; do not reproduce any earlier face.

Primary request: create an entirely original cinematic frame inside a mountain radio maintenance room. In the right-center foreground stands a newly invented 36-year-old East Asian man with a rectangular face, high forehead, short clean side-parted hair, no facial hair, and no eyewear. He wears a loose aged ivory-white linen field shirt with a soft band collar, fastened high enough to avoid a deep open neckline. One hand holds a burned vacuum tube at lower chest height while his other arm hangs naturally. In the left rear, a newly invented 52-year-old East Asian woman with a silver-streaked low bun and a charcoal utility apron adjusts a radio dial. Their original narrative is the diagnosis of a failed transmitter after a nighttime signal interruption.

Scene/backdrop: a distinct mountain radio workshop with dark olive acoustic wall panels, stacked black bakelite radio cabinets, copper-wire spools, a narrow repair bench, and a high horizontal ribbed-glass window. No blinds. The window form, furniture layout, and room geometry must be newly designed.

Composition/framing: 2.35:1 compressed medium close framing, 65mm lens tendency, camera slightly below eye level around 1.35m, foreground man right of center, rear woman left and softly defocused. Maintain a clear front-back relationship without recreating a known shot. The man's hands stay away from his waist.

Lighting/mood: soft directional cream window light entering from the upper left, subdued fill, moderate-low contrast, green-black room shadows, quiet post-crisis concentration.

Color palette: this is the center target. Use deep oxidized olive, green-black, charcoal, dark teak, black bakelite, and subdued creamy highlights. Skin is low-saturation living peach-brown with a clearly readable but controlled muted brick-red and rose-brown blood presence across the broad facial and hand midtones, approximately a 7–8% perceptual chroma influence. Distribute it continuously through the forehead, temples, cheeks, nose, jaw, neck, and visible hands; let the ears, nose wings, inner cheeks, and lips carry about 1.4 times the local red density. Highlights stay cream-peach and skin shadows stay warm neutral brown / warm umber, never cyan-gray. The face must read warmer than the prior cyan result but must not appear flushed, orange, or red-painted. Keep the garment neutral-warm ivory with faint peach-beige folds and keep the window light creamy off-white. Cyan, teal, cyan-green, and olive belong only to the room and other non-skin areas. Do not apply a global warm grade, global red tint, or overall WB, Tint, or Saturation shift.

Materials/textures: natural pores, uneven age detail, linen weave, oxidized brass, dusty bakelite, restrained 35mm grain, mild halation, slight optical softness, no clinical digital cleanliness.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. All facial proportions, hair, costume, gestures, props, room geometry, and story must be original.

Avoid: copied faces or frames, round eyewear, tinted lenses, moustache, goatee, beard, hand on hip, arm akimbo, deep open white shirt, copied facial structure, copied pose, cyan-olive skin, teal skin, green facial midtones, gray-green complexion, corpse-gray skin, excessive red or flushed skin, orange or yellow skin, magenta cheeks, isolated cheek blush, makeup, sunburn, alcohol flush, uniform red mask, global cool grade, global warm filter, global red tint, shifted background olive, orange wood, pink, yellow, blue, or cyan white shirt, warmer window light, hyper-sharp digital detail, HDR, smooth AI skin, beauty retouching, subtitles, text, logo, or watermark.

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 05 C, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Generation isolation: use no input image, visual reference, previous output, identity transfer, face transfer, or image recoloring. The two source stills were used only for offline human color analysis and must not be supplied to the generator.

Color-only test boundary: keep every non-color specification unchanged, including role, age, gender, face-shape description, hairstyle, garment cut, gesture, prop, room design, blocking, crop, lens tendency, camera height, lighting direction, exposure, contrast, depth of field, materials, grain, halation, and optical softness. Invent a fresh original face within the same written character specification; do not reproduce any earlier face.

Primary request: create an original cinematic scene in a municipal textile conservation studio. A newly invented 56-year-old East Asian woman occupies the center-left foreground. She has an angular face, short silver-gray pixie hair, no eyewear, and wears a worn ivory-white conservation smock with a high soft neckline. She holds a faded textile strip between both hands and examines its fibers. In the right rear, a newly invented 24-year-old East Asian man with shoulder-length hair tied in a low ponytail, no facial hair, and a dark forest-green shirt operates a small brass sample press. Their original narrative is a final inspection of an archive fabric that was dyed incorrectly before the studio closes.

Scene/backdrop: rough dark olive walls, vertical racks of rolled fabric, charcoal storage trays, brass sample clips, a deep walnut work surface, and a small square frosted skylight high on the right. No venetian blinds, radio equipment, seed drawers, or borrowed set architecture.

Composition/framing: 2.35:1 cinematic frame, 50mm lens tendency, camera slightly above eye level around 1.52m, foreground woman center-left, rear man right, more visible room depth than A or B, natural shallow focus without extreme bokeh. Both foreground hands remain engaged with the textile and away from the waist.

Lighting/mood: soft cream skylight from the upper right, delicate falloff across the foreground face, low-key green-black ambient shadows, restrained observational mood.

Color palette: oxidized dark olive, green-black, charcoal, dark walnut, tarnished brass, and dim cream light. This is the upper warm-red boundary test. Skin is low-saturation warm peach-brown with a broader muted terracotta and dusty brick-red blood presence across facial and hand midtones, approximately a 10–11% perceptual chroma influence. Keep the distribution anatomical and diffuse: strongest in the ears, nose wings, inner cheeks, lower lip, and neck, with continuous lower-density warmth across the forehead, temples, jaw, and hands. Highlights remain neutral ivory / cream-peach and skin shadows remain warm neutral brown. Preserve natural human variation without red flush, makeup, orange cast, or magenta skin. Keep the white smock neutral-warm ivory with neutral beige folds and keep the skylight neutral cream. Cyan, teal, cyan-green, and olive belong only to the room and other non-skin areas. Do not apply a global warm grade, global red tint, or overall WB, Tint, or Saturation shift.

Materials/textures: visible cotton-smock wear, fabric fibers, aged plaster, tarnished brass, natural pores and age lines, fine 35mm grain, gentle halation, mild optical softness, low digital micro-contrast.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. Every identity, face, body, garment, gesture, object, room, and narrative element must be original.

Avoid: image recoloring, copied composition, copied hairstyle, copied room layout, round sunglasses, colored round lenses, moustache, goatee, hand on waist, arm akimbo, crossed arms, deep open white shirt, cyan-olive skin, teal skin, green facial midtones, gray-green complexion, corpse-gray skin, red face, ruddy flush, magenta blush, orange or yellow skin, isolated cheek blush, makeup, sunburn, alcohol flush, uniform red mask, global cyan cast, global warm filter, global red tint, shifted background olive, orange wood, pink, yellow, or cyan white smock, warmer skylight, glossy fashion lighting, HDR, excessive clarity, waxy skin, symmetrical AI face, subtitles, text, logo, or watermark.

Prompt C | 安全原创转译版 | Round 05

用途：原创人物、原创场景、原创叙事的偏红边界测试。不得使用任何原片或旧测试图片输入。

生成参数

- 生成方式：brand-new text-to-image
- 图像输入：无
- 人物：原创女性修复师 + 原创男性助理
- 场景：原创市政纺织样本修复室
- Blocking：中左前 / 右后
- 焦距倾向：50mm
- 皮肤青红边界：cyan / olive = 0；muted terracotta / dusty brick-red 约 10–11%，三版偏红边界

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 05 C, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment cut, prop, room geometry, blocking, and narrative from scratch. Do not reconstruct, recolor, or imitate any existing image.

Generation isolation: use no input image, visual reference, previous output, identity transfer, face transfer, or image recoloring. The two source stills were used only for offline human color analysis and must not be supplied to the generator.

Color-only test boundary: keep every non-color specification unchanged, including role, age, gender, face-shape description, hairstyle, garment cut, gesture, prop, room design, blocking, crop, lens tendency, camera height, lighting direction, exposure, contrast, depth of field, materials, grain, halation, and optical softness. Invent a fresh original face within the same written character specification; do not reproduce any earlier face.

Primary request: create an original cinematic scene in a municipal textile conservation studio. A newly invented 56-year-old East Asian woman occupies the center-left foreground. She has an angular face, short silver-gray pixie hair, no eyewear, and wears a worn ivory-white conservation smock with a high soft neckline. She holds a faded textile strip between both hands and examines its fibers. In the right rear, a newly invented 24-year-old East Asian man with shoulder-length hair tied in a low ponytail, no facial hair, and a dark forest-green shirt operates a small brass sample press. Their original narrative is a final inspection of an archive fabric that was dyed incorrectly before the studio closes.

Scene/backdrop: rough dark olive walls, vertical racks of low-chroma faded fabric, charcoal storage trays, brass sample clips, a deep walnut work surface, and one clearly small square frosted skylight high on the right. The skylight must stay square and compact, never horizontal or panoramic. No venetian blinds, radio equipment, seed drawers, or borrowed set architecture.

Composition/framing: 2.35:1 cinematic frame, 50mm lens tendency, camera slightly above eye level around 1.52m, foreground woman center-left, rear man right, more visible room depth than A or B, natural shallow focus without extreme bokeh. Both foreground hands remain engaged with the textile and away from the waist.

Lighting/mood: soft cream skylight from the upper right, delicate falloff across the foreground face, low-key green-black ambient shadows, restrained observational mood.

Color palette: oxidized dark olive, green-black, charcoal, dark walnut, tarnished brass, and dim cream light. This is the upper warm-red boundary test. The foreground face and visible hands must carry the strongest clearly readable low-saturation muted terracotta and dusty brick-red skin midtones of all three variants at normal viewing size. Use approximately a 10–11% perceptual red-chroma influence in living skin only. The result must be visibly warmer and redder than the B center value while remaining natural and unflushed. No pale beige, gray, cyan, olive, or green facial midtones. Keep the red distribution anatomical and diffuse: strongest in the ears, nose wings, inner cheeks, lower lip, and neck, with continuous lower-density warmth across the forehead, temples, jaw, and hands. Highlights remain neutral ivory / cream-peach and skin shadows remain warm neutral brown. Do not spend the red-chroma budget on textile, wood, brass, garment, wall, or background; reserve the increased red weight for living skin only. Keep every textile low-chroma faded taupe / gray-brown, keep the walnut and brass subdued, keep the white smock neutral-warm ivory with neutral beige folds, and keep the small square skylight neutral cream. Cyan, teal, cyan-green, and olive belong only to the room and other non-skin areas. Do not apply a global warm grade, global red tint, or overall WB, Tint, or Saturation shift.

Materials/textures: visible cotton-smock wear, fabric fibers, aged plaster, tarnished brass, natural pores and age lines, fine 35mm grain, gentle halation, mild optical softness, low digital micro-contrast.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, or person from an earlier test, even approximately. Every identity, face, body, garment, gesture, object, room, and narrative element must be original.

Avoid: image recoloring, copied composition, copied hairstyle, copied room layout, round sunglasses, colored round lenses, moustache, goatee, hand on waist, arm akimbo, crossed arms, deep open white shirt, cyan-olive skin, teal skin, green facial midtones, gray-green complexion, corpse-gray skin, pale beige or gray facial midtones, red face, ruddy flush, magenta blush, orange or yellow skin, isolated cheek blush, makeup, sunburn, alcohol flush, uniform red mask, red or orange textile, saturated warm wood, red-shifted brass or wall, global cyan cast, global warm filter, global red tint, shifted background olive, orange wood, pink, yellow, or cyan white smock, horizontal or panoramic skylight, warmer skylight, glossy fashion lighting, HDR, excessive clarity, waxy skin, symmetrical AI face, subtitles, text, logo, or watermark.

Round 05 · C | JW-LTBF-02_C_r05.png

Round 06

Janet：整体红色太少、太青，而且背景很脏；先搜索。

唯一主动变量	暗部、中调、高光分区并删除脏感触发词。
阶段结果	A/B 色彩完美；B/C 背景仍脏；C 暖红不足。
生成边界	零图像输入、独立 text-to-image；不使用旧图做 edit target。

原始 feedback.md

日期：2026-07-15

原始反馈

还是不够暖，画面中的整体红色都太少了，太青，而且背景很脏，去搜索怎么办，然后再出提示词。

本轮判定

- Round 05 的问题不是只有人物肤色：红暖主要停留在脸部，而且被多重“低饱和 / 克制 / 不可偏红”约束压回米灰色，画面整体仍由 olive / green-black 主导。
- 背景同时叠加 `rough`、`oxidized`、`dusty`、`aged plaster`、低对比、颗粒、柔化与晕光，容易生成灰绿薄雾、斑驳表面和杂乱道具，形成“脏”的观感。
- 不能只继续提高脸部红色，否则会变成“红脸 + 脏绿背景”。必须把暖色分布到干净的中间调、自然肤色、奶油窗光、白衣反光和少量铜 / 深桃木点缀；同时把最深暗部保持为低饱和中性炭黑。

Round 06 只修改的变量

7. 全画面中间调的红 / 琥珀权重。
8. 人物脸、颈部与手部的连续自然血色。
9. 白衣半影中的极淡 peach-beige 暖反光。

10. 背景表面的整洁度、色块分离和道具秩序。

11. 背景暗部的低饱和与干净黑位。

12. 颗粒、晕光和材质噪声的克制度。

继续锁定

- A / B / C 均为零图像输入的 brand-new text-to-image。
- 不使用原片、参考帧或旧测试图作为生成输入，不做换色、重绘、身份迁移或脸部迁移。
- 三版各自的人物身份、年龄、性别、发型、服装剪裁、动作、功能空间、blocking、焦段、机位和叙事动作保持不变。
- 三版继续采用独立原创人物、原创房间几何与原创叙事。

本轮目标

- A：已明显暖于 Round 05 的干净暖色起点。
- B：建议中心值，人物与全画面中间调都有清楚的 rose-brown / red-amber 权重。
- C：自然范围内的暖红上限，不允许变成红色滤镜、橙黄脸或粉色白衣。

本轮先完成 Prompt，不生成图片。

search-notes.md

证据边界

以下调色判断只能表述为：根据画面结果推测。

本文件不声称掌握原片真实的 DaVinci Resolve 节点、数值、LUT、色彩管理或摄影机参数，也不伪造任何真实 Resolve 参数。搜索资料只用于把成熟的分区调色原则转译成生成 Prompt 语言。

官方资料结论

13. [Blackmagic Design | DaVinci Resolve

Color](<https://www.blackmagicdesign.com/products/davinciresolve/color>)说明 Lift / Gamma

/ Gain 对应不同明度区域；Log grading 可以更紧密地分别处理 shadows、midtones、highlights。页面也明确给出 Lum vs Sat 的典型思路：中间调可增加饱和，暗部可降低饱和，以保持深度。

14. [Adobe | RGB Curves](<https://helpx.adobe.com/in/premiere/desktop/correct-color/add-color-effects/correct-color-using-rgb-curves.html>)说明可以按色彩通道与明度区域做选择性调整；其暖化示例通过提高红色影响、降低蓝绿影响实现，而不是只做统一曝光或统一饱和。
15. [Adobe | Hue and Saturation Curves](<https://helpx.adobe.com/ca/premiere/desktop/correct-color/add-color-effects/correct-color-using-hue-and-saturation-curves.html>)说明 Hue vs Sat、Hue vs Hue、Hue vs Luma、Luma vs Sat、Sat vs Sat 可分别选择色相、亮度与饱和范围，避免全图一起漂色。
16. [Adobe | HSL Secondary](https://helpx.adobe.com/mena_en/premiere/desktop/correct-color/add-color-effects/correct-color-using-hsl-secondary-controls.html)说明可以按 hue、saturation、luma 选择局部区域，支持把人物肤色、白衣和背景分开控制。

对 Round 05 的画面诊断

根据画面结果推测：

- 三张图的红暖权重都集中在人物皮肤，且只落在面部较小区域；背景、衣服和大面积中间调仍由灰绿、olive 与深棕主导，因此缩略图第一眼依旧偏青冷。
- `green-black ambient shadows` 把绿色从墙面材质扩散成了环境光色；olive 不再只是背景物体色，而像全画面色罩。
- `rough + dark + oxidized + dusty + subdued + moderate-low contrast + softness + grain + halation` 形成叠加效应，背景出现斑驳、灰雾、泥棕和细碎噪声。
- 长串否定词反复出现 cyan、teal、green、olive，同时红色要求又被 `conservative`、`controlled`、`faint` 和百分比压低，模型容易继续强化冷色 token，却把红暖退化成普通 beige。

Prompt 处理方案

1. 分开三个明度区域

- 暗部：低饱和 neutral charcoal；深 olive 只属于墙体表面，不作为环境光色，不向人物和白衣渗色。
- 中间调：承担全画面的 warm red-amber / rose-brown / muted terracotta 权重；必须在缩略图尺度也能读到。
- 高光：保持 luminous cream-white / cream-peach，不染成橙、粉或灰黄。

2. 暖色不能只放在脸上

- 肤色：脸、额头、颊、下颌、颈部与手部连续分布 peach-rose / rose-brown / terracotta；耳部、鼻翼、内颊和唇部略密，但不能成为孤立腮红。
- 白衣：整体仍是 clean warm ivory，只允许在靠近皮肤、木面或窗光的半影褶皱出现极淡 peach-beige 反光。
- 窗光：亮而干净的 creamy off-white / soft cream-gold，作为第二暖锚点。
- 背景：只保留少量 copper、mahogany、dark rust 或 muted oxblood 点缀，最深暗部不加红。

3. “背景干净”同时处理材质和色彩

- 删除或替换：rough、dusty、oxidized、tarnished、mottled、aged plaster、hanging / stacked clutter、heavy grain、heavy halation、haze。
- 使用：intact matte surfaces、organized geometry、cleared work surface、clean black point、readable large-form separation、localized handling wear。
- 年代感来自柔和边角、反复使用痕迹、木作接缝和时期道具，不来自污渍、霉斑、剥落、灰尘或废墟感。

4. Round 06 三档

数字只作为内部感知梯度标签，不是 Resolve 参数，也不要求生成器执行精确百分比：

- A：约 13–14%，restrained but unmistakable，已明显高于 Round 05。
- B：约 17–18%，clear medium-strong，作为建议中心值。
- C：约 21–22%，strongest natural boundary，测试自然暖红上限。

三版都禁止 global orange / sepia / red wash；区别只在干净中间调的红暖强度，不在是否偏青。

- 内部梯度标签：A ≈ 13–14%，restrained but unmistakable；不是 Resolve 参数

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 06 A, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment, prop arrangement, room geometry, and narrative detail from scratch. Do not reconstruct, recolor, edit, trace, or imitate any existing image.

Generation isolation: use no input image, source frame, visual reference, previous output, identity transfer, face transfer, image-to-image process, or recoloring. Preserve only the written role and scene specification; invent a completely fresh original identity and fresh room realization.

Round 06 test boundary: preserve the written role, age, gender, facial-structure description, hairstyle, garment cut, gesture, functional props, room function, blocking, crop, 58mm lens tendency, camera height, lighting direction, and depth relationship. Change only the distribution of warm-red color through the frame, the openness and cleanliness of the midtones, background surface cleanliness, prop organization, and restraint of texture noise.

Primary request: create an entirely original period interior with two newly designed East Asian people. A 42-year-old woman stands in the left foreground, dominant in frame, examining an opened paper seed envelope with both hands at chest level. She has a broad oval face, short straight side-parted hair tucked behind one ear, no eyewear, and wears a clean, repeatedly laundered collarless ivory-white cotton work shirt with soft creases and matte fibers. In the right rear, a 28-year-old man with a narrow face, dense natural curls, no facial hair, and a dark brown utility vest checks a metal specimen drawer. Their original narrative is a careful re-check of recently moved seed stock before seasonal storage.

Scene/backdrop: an original, clean, dry, orderly, regularly maintained regional seed archive. Use intact matte deep neutral-olive lime-plaster walls with broad even color fields, orderly charcoal-gray painted-metal specimen drawers

with clean handles, neatly arranged cotton seed sacks on one simple storage rail, a cleared dark-wood sorting bench holding only the active seed materials, and one narrow vertical wired-frosted window on the left. The room is practical and established rather than new, glossy, sterile, or modern. Show period age only through softened wooden edges, repeated handling, and discreet repaired joinery, never through dirt, stains, decay, or clutter. No venetian blinds.

Composition/framing: 2.35:1 cinematic frame, medium close shot, foreground woman on the left, rear man smaller on the right, 58mm lens tendency, eye-level camera around 1.45m, natural shallow depth of field. The woman uses both hands on the seed envelope; no hand touches the waist. Use an observational composition with imperfect asymmetry.

Lighting/mood: bright soft cream-white window light from the left rear, gentle facial modeling, open readable midtones, clean highlight roll-off, moderate natural contrast, and low-saturation neutral-charcoal ambient shadows. Olive remains a wall-surface color only and must never behave as a green light or shadow cast. Quiet procedural tension.

Color priority: at first glance, the frame must read warm-neutral with a clear red-amber midtone bias, never green-led or cyan-led. Warmth must be distributed across living skin, luminous cream window light, subtle peach-beige reflections in the ivory garment folds, and a few small copper or mahogany accents; it must not be confined to the cheeks.

Skin: use restrained but unmistakable face-wide warm peach-rose, muted rose-brown, and soft terracotta across the forehead, temples, cheeks, nose, jaw, neck, and visible hands. This broad warm blood presence must remain readable at thumbnail size. Ears, nose wings, inner cheeks, lower lip, and knuckles may be slightly denser, but never isolated as makeup or blush. Skin highlights are clean cream-peach; skin shadows are low-chroma warm neutral brown. The person must look alive and naturally warm, not beige-gray, green-gray, orange, sunburned, or red-painted.

White and highlights: the shirt remains recognizably clean warm ivory. Only its half-shadow folds near skin, wood, or window bounce may carry a very light peach-beige reflection; the brightest cloth and window areas remain luminous creamy off-white, not pink or yellow.

Background palette: keep one clean deep neutral-olive wall family, neutral charcoal drawers, distinct dark-brown wood, and one or two controlled low-saturation copper / mahogany micro-accents. The deepest background shadows remain low-chroma neutral charcoal with a clean black point; do not add red to the blacks. Large forms must separate clearly without gray-green fog, olive-brown mixing, or a muddy veil. No global warm filter, global orange or sepia wash, global red tint, or global saturation increase.

Materials/textures: clean dry cotton fibers, intact matte lime plaster, well-maintained painted metal, dark wood with subtle handling polish, natural pores and age detail, fine restrained photochemical grain, very mild halation limited to bright window edges, controlled optical softness, and clear large-form separation. The image should feel photographed, not polished by AI.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, actor, or person from an earlier test. The faces, hairstyles, bodies, garments, gestures, props, room, and story must remain original.

Avoid: copied faces, copied frames, copied room geometry, image recoloring, round sunglasses, tinted round lenses, moustache, goatee, hand on waist, arm akimbo, deep-open white collar, bloodless or cosmetic-looking skin, uniform

color masks, global cool or warm casts, dirty whites, contaminated window light, muddy low-separation backgrounds, mottled stains, damp walls, peeling plaster, dust haze, random prop piles, heavy grain, heavy halation, glossy modern renovation, sterile laboratory styling, HDR, waxy skin, excessive digital clarity, subtitles, text, logo, or watermark.

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 06 B, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment, prop arrangement, room geometry, and narrative detail from scratch. Do not reconstruct, recolor, edit, trace, or imitate any existing image.

Generation isolation: use no input image, source frame, visual reference, previous output, identity transfer, face transfer, image-to-image process, or recoloring. Preserve only the written role and scene specification; invent a completely fresh original identity and fresh room realization.

Round 06 test boundary: preserve the written role, age, gender, facial-structure description, hairstyle, garment cut, gesture, functional props, room function, blocking, crop, 65mm lens tendency, camera height, lighting direction, and depth relationship. Change only the distribution of warm-red color through the frame, the openness and cleanliness of the midtones, background surface cleanliness, prop organization, and restraint of texture noise.

Primary request: create an entirely original cinematic frame inside a mountain radio maintenance room. In the right-center foreground stands a newly invented 36-year-old East Asian man with a rectangular face, high forehead, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose ivory-white linen field shirt with a soft band collar, matte fibers, and a neckline fastened high enough to avoid a deep opening. One hand holds a burned vacuum tube at lower chest height while his other arm hangs naturally. In the left rear, a newly invented 52-year-old East Asian woman with a silver-streaked low bun and a charcoal utility apron adjusts a radio dial. Their original narrative is the diagnosis of a failed transmitter after a nighttime signal interruption.

Scene/backdrop: a distinct, clean, dry, regularly maintained mountain radio workshop with intact matte deep neutral-olive acoustic wall panels, orderly aligned black bakelite radio cabinets, neatly wound copper-wire spools, a cleared narrow repair bench holding only the active components, and a high horizontal ribbed-glass window. The equipment

is period-authentic and frequently used but carefully maintained. Use simple readable room geometry and clean spacing between props. The room has subdued utility and human warmth, with no modern laboratory finish, visible grime, grease, corrosion, or clutter. No blinds.

Composition/framing: 2.35:1 compressed medium close framing, 65mm lens tendency, camera slightly below eye level around 1.35m, foreground man right of center, rear woman left and softly defocused. Maintain a clear front-back relationship without recreating a known shot. The man's hands stay away from his waist.

Lighting/mood: bright soft directional cream-white window light entering from the upper left, gentle facial modeling, open readable midtones, clean highlight roll-off, moderate natural contrast, and low-saturation neutral-charcoal ambient shadows. Olive remains a wall-panel color only and must never act as a green light or shadow cast. Quiet post-crisis concentration.

Color priority: at first glance, the whole frame must read warm-neutral with a clear medium-strong red-amber midtone bias, never green-led or cyan-led. Warmth must be distributed through living skin, luminous cream window light, soft peach-beige reflections in the ivory garment, dark teak, and two or three controlled copper / muted oxblood accents. The red warmth cannot exist only in ears or cheeks.

Skin: use a clearly readable, continuous, face-wide combination of warm peach-brown, muted rose-brown, and natural terracotta through the forehead, temples, cheeks, nose, jaw, neck, and visible hands. The medium-strength warm blood presence must be obvious at thumbnail size and visibly stronger than A. Ears, nose wings, inner cheeks, lower lip, neck edges, and knuckles may carry slightly denser natural rose-terracotta, but there must be no isolated blush. Skin highlights are clean cream-peach; skin shadows remain low-chroma warm neutral brown. The face must look alive and warmer than Round 05 without appearing orange, red-painted, cosmetic, or flushed.

White and highlights: the field shirt remains clean warm cream-ivory. Major half-shadow folds may carry a thin low-saturation rose-beige / peach-beige reflected warmth, while its brightest planes and the ribbed window stay luminous creamy off-white. The shirt must still read as white, never pink, tan, yellow, cyan, or gray-dirty.

Background palette: keep one clean deep neutral-olive panel family, clean neutral-charcoal and black bakelite equipment, distinct dark teak, and a small number of low-saturation copper, mahogany, and muted oxblood accents. These warm accents help balance the frame but remain subordinate to the people and white garment. Deepest shadows remain low-chroma neutral charcoal with a clean black point; do not turn the blacks brown or red. Maintain crisp separation between large background color fields without gray-green fog, olive-brown mud, or a low-contrast veil. No global warm filter, global orange or sepia wash, global red tint, or global saturation increase.

Materials/textures: clean matte bakelite with subtle handling sheen, neatly wound copper, subdued satin brass without corrosion, intact dark teak, natural pores, linen weave, fine restrained 35mm grain, very mild halation limited to the bright window, controlled optical softness, and clean large-form separation. Preserve photographic imperfection without surface dirt or AI polish.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, actor, or person from an earlier test. All facial proportions, hair, costume, gestures, props, room geometry, and story must remain original.

Avoid: any film, director, actor, character, or real-person name; copied faces or frames; image recoloring; round eyewear; tinted lenses; moustache; goatee; beard; hand on hip; arm akimbo; deep-open white shirt; bloodless or cosmetic-looking skin; uniform color masks; global cool or warm casts; dirty whites; contaminated window light;

muddy low-separation backgrounds; stained wall panels; dust haze; greasy equipment; random prop piles; heavy grain; heavy halation; glossy modern renovation; sterile laboratory styling; hyper-sharp digital detail; HDR; smooth AI skin; beauty retouching; subtitles; text; logo; or watermark.

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 06 C, independent original cinematic frame

Generation method: generate a brand-new photorealistic cinematic still solely from this written specification. Invent every face, body, garment, prop arrangement, room geometry, and narrative detail from scratch. Do not reconstruct, recolor, edit, trace, or imitate any existing image.

Generation isolation: use no input image, source frame, visual reference, previous output, identity transfer, face transfer, image-to-image process, or recoloring. Preserve only the written role and scene specification; invent a completely fresh original identity and fresh room realization.

Round 06 test boundary: preserve the written role, age, gender, facial-structure description, hairstyle, garment cut, gesture, functional props, room function, blocking, crop, 50mm lens tendency, camera height, lighting direction, skylight shape, and depth relationship. Change only the distribution of warm-red color through the frame, the openness and cleanliness of the midtones, background surface cleanliness, prop organization, and restraint of texture noise.

Primary request: create an original cinematic scene in a municipal textile conservation studio. A newly invented 56-year-old East Asian woman occupies the center-left foreground. She has an angular face, short silver-gray pixie hair, no eyewear, and wears a clean, repeatedly laundered ivory-white conservation smock with a high soft neckline, gentle creasing, and matte fibers. She holds a neutral oatmeal textile strip between both hands and examines its fibers. In the right rear, a newly invented 24-year-old East Asian man with shoulder-length hair tied in a low ponytail, no facial hair, and a dark forest-green shirt operates a small clean brass sample press. Their original narrative is a final inspection of an archive fabric before the studio closes.

Scene/backdrop: a well-kept, dry, orderly municipal textile conservation studio with intact matte deep neutral-olive plaster walls, evenly spaced clean archival textile rolls in low-chroma neutral oatmeal, taupe, and charcoal, orderly

charcoal storage trays, clean subdued-satin brass sample clips, a cleared dark-walnut work surface containing only the active conservation tools, and one compact square frosted skylight high on the right. The skylight must remain square and compact, never horizontal or panoramic. The room is established and period-authentic through wooden joinery, matte materials, and hand-operated tools, not through dirt, damage, or modern clinical design. No venetian blinds, radio equipment, seed drawers, or borrowed set architecture.

Composition/framing: 2.35:1 cinematic frame, 50mm lens tendency, camera slightly above eye level around 1.52m, foreground woman center-left, rear man right, more visible room depth than A or B, natural shallow focus without extreme bokeh. Both foreground hands remain engaged with the textile and away from the waist.

Lighting/mood: clear soft cream-white skylight from the upper right, delicate facial falloff, open readable midtones, clean highlight roll-off, moderate natural contrast, and deep low-saturation neutral-charcoal ambient shadows with readable large-form separation. Olive remains a wall-surface color only and must never act as a green light or shadow cast. Restrained observational mood.

Color priority: at first glance, the whole frame must read unmistakably warm-neutral with the strongest natural red-amber midtone bias of the three variants, never green-led or cyan-led. Warmth must be carried by living skin, luminous cream skylight, delicate peach-ivory reflections in the white smock, dark walnut, and a few small muted copper / burgundy accents. It is a warm-red upper-bound test, not a global red, orange, yellow, or sepia filter.

Skin: give the foreground face, neck, and visible hands a strong but natural face-wide combination of muted terracotta, copper-rose, muted brick-rose, and warm peach-brown. The broad warm blood presence must remain unmistakable at normal and thumbnail viewing sizes, visibly stronger than B, and continuous across the forehead, temples, cheeks, nose, jaw, neck, and hands. Ears, nose wings, inner cheeks, lower lip, and knuckles may be slightly denser, but the face must never look sunburned, cosmetic, magenta, orange, or uniformly red. Skin highlights remain clean cream-peach; skin shadows remain low-chroma warm neutral brown rather than green-gray.

White and highlights: the smock remains recognizably clean warm ivory. Its half-shadow folds facing skin, walnut, or skylight bounce may carry one additional step of very low-saturation peach-ivory / rose-beige reflected warmth compared with B, while the brightest cloth and skylight remain luminous creamy off-white. Never turn the garment pink, brown, yellow, cyan, or gray-dirty.

Background palette: keep one clean deep neutral-olive wall family, neutral-charcoal storage, low-chroma neutral textiles, distinct dark walnut, subdued brass, and only a few small muted copper, oxblood, or burgundy accents. The warm accents must remain low-area and subordinate. Deepest shadows stay low-chroma neutral charcoal with a clean black point; do not add red to the blacks. Maintain clean separation between wall, storage, wood, textiles, and skin without gray-green fog, olive-brown mud, or dirty haze. No global warm filter, global red tint, or global saturation increase.

Materials/textures: clean dry textile fibers, intact matte plaster, subdued satin brass without corrosion, dark walnut with gentle handling polish, natural pores and age lines, fine restrained 35mm grain, very mild halation limited to the bright skylight, controlled optical softness, and clean large-form separation. Keep material detail tactile but quiet, never grimy or overprocessed.

Originality boundary: both people must be newly invented and must not resemble any public figure, existing fictional character, actor, or person from an earlier test. Every identity, face, body, garment, gesture, object, room, and narrative element must remain original.

Avoid: image recoloring; copied composition, faces, hairstyles, or room layout; any film, director, actor, character, or real-person name; round sunglasses; colored round lenses; moustache; goatee; hand on waist; arm akimbo; crossed arms; deep-open white shirt; bloodless or cosmetic-looking skin; uniform color masks; global cool or warm casts; dirty whites; contaminated skylight; muddy low-separation backgrounds; mottled stains; peeling plaster; dust haze; random textile piles; heavy grain; heavy halation; glossy fashion lighting; sterile modern laboratory styling; HDR; excessive clarity; waxy skin; symmetrical AI face; subtitles; text; logo; or watermark.

Round 06 · C | JW-LTBF-02_C_r06.png

Round 07

Janet：学习 Image2 脏点教程；锁色，修 B/C 脏点。

唯一主动变量	少量大形、完整表面、低频材质与负空间。
阶段结果	色彩改善，但干净被误执行为背景秃掉。
生成边界	零图像输入、独立 text-to-image；不使用旧图做 edit target。

原始 feedback.md

上轮判定

- A：颜色很完美，可作为本轮干净度对照。
- B：颜色很完美，但背景偏脏。
- C：暖红权重仍不足；颜色需要直接吸收 A / B 的有效结构，背景也偏脏。

教程结论转译

- 每张图都使用一次全新的独立 text-to-image 调用，避免在旧图或旧生成链上继续累积缺陷。
- 不把原片、参考帧、Round 06 图片或任何旧输出传给生成器。
- 预防优先：用少量大形体、完整哑光表面、低频材质和充足负空间建立背景。
- 背景脏感不靠后期降噪解决；本轮先从场景描述中删除重复小物、粗糙纤维、氧化、斑驳、灰尘、颗粒、晕光和雾。
- 只修改被 Janet 指出的变量，不推翻人物关系、blocking、焦段倾向和光线方向。

Round 07 单变量矩阵

版本 锁定项 本轮修改项
--- --- ---
A Round 06 A 的暖中性色彩、人物关系、空间和镜头 只压低背景微纹理，验证无脏点基线
B Round 06 B 的全部色彩关系、人物、blocking 和镜头 删除重复仪表、旋钮、线圈、电线与多组柜体
C 人物、blocking、50mm、右上方形天窗 直接采用 A / B 的暖中性色彩层级，并把背景压成少量大色块

生成边界

- 三张均为原创人物、原创空间、原创叙事。
- 三次独立生成，零图像输入。
- 禁止 edit、recolor、image-to-image、face transfer、identity transfer。
- 本轮仍是观察样本，不提前冻结。

anti-dirt-strategy.md

问题拆解

Round 06 的 B / C 并不是单纯分辨率不足。主要问题是背景中同时出现了过多重复小物、密集边缘和高频材质：仪表、旋钮、线圈、电线、柜格、布卷、粗纤维、抽屉与工具相互叠加，生成器又用斑驳、颗粒和局部脏色填补这些区域，因此正常观看尺寸下会形成“脏点”和灰绿泥感。

本轮执行

17. 背景只保留 3-5 个清楚分离的大形体。
18. 用人物手里的功能道具表达职业，不靠满墙小物说明空间。
19. 墙体使用完整、平滑、干燥的哑光色面；木、金属和织物只保留宽尺度材质特征。
20. 保留真实皮肤毛孔与衣物褶皱，但把背景微细节降到很低。
21. 不添加 film grain、halation、haze、bloom 或 texture overlay。
22. 依靠自然高光过渡、局部对比和景深获得摄影感。

暂不采用

教程中的“以脏图只传位置、另用干净素材重建颜色和材质”属于参考图修复链。本项目当前规则禁止把旧图或原片传给生成器，因此本轮不采用该方法，也不做后期降噪；只做全新文字生成与源头预防。

Round 07 • Prompt A

文件 : round-07/prompt_A_internal.md · SHA-256 :

43d6400e81a7de4d9028a55ca21b805eaabbdb6b85336d532dc407953b218432

Prompt A | 内部视觉研究版 | Round 07

用途：锁定 Round 06 A 已通过肉眼评价的色彩，建立“低背景微纹理”的干净对照。人物、空间、叙事全部原创；不得传入原片或旧图。

生成参数

- 生成方式：brand-new text-to-image
- 图像输入：无
- 人物：原创女性档案主管 + 原创男性助理
- 场景：原创地方种子档案室
- Blocking：左前 / 右后
- 焦距倾向：58mm
- 本轮唯一变量：背景微纹理与道具密度下降
- 色彩：锁定上一轮 A 的暖中性结果，不再增加或降低红色

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 07 A, independent original cinematic frame

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use no input image, source frame, visual reference, previous output, image-to-image process, recoloring, face transfer, or identity transfer. Invent every person, face, body, garment, prop, room geometry, and narrative detail from scratch.

Create an original, clean regional seed archive. A newly invented 42-year-old East Asian woman occupies the left foreground and examines one opened paper seed envelope with both hands at chest level. She has a broad oval face, short straight side-parted hair tucked behind one ear, no eyewear, and a clean collarless warm-ivory cotton work shirt with matte fibers and natural soft creases. In the right rear, a newly invented 28-year-old East Asian man with a narrow face, dense natural curls, no facial hair, and a dark-brown utility vest checks one specimen drawer. Both hands of the woman remain on the envelope and away from her waist.

Build the room from a few calm, separated large forms: one broad uninterrupted smooth matte deep neutral-olive wall, one low charcoal metal specimen cabinet with four broad drawer fronts, one simple rail carrying three large orderly cotton seed sacks, one cleared dark-mahogany sorting bench, and one narrow vertical wired-frosted window on the left. On the bench show only one shallow seed tray and one small muted-copper bowl. Leave generous negative space. The archive is established, dry, orderly, and regularly maintained; express age only through softened wood edges and discreet repaired joinery, never dirt or decay.

Use a medium-close observational composition, imperfect asymmetry, 58mm lens tendency, eye-level camera around 1.45m, foreground woman left and smaller rear man right, with natural shallow focus and clear room depth. Soft cream-white window light enters from the left rear, with gentle facial modeling, open readable midtones, moderate natural contrast, clean highlight roll-off, and low-chroma neutral-charcoal shadows.

Lock the successful warm-neutral color balance: at first glance the frame reads warm-neutral with a restrained but clearly visible red-amber midtone bias, never cyan-led or green-led. Give the woman continuous face-wide living warmth across forehead, temples, cheeks, nose, jaw, neck, and hands using natural warm peach-rose, muted rose-brown, and soft terracotta. Keep clean cream-peach skin highlights and low-chroma warm-neutral-brown skin shadows. The shirt remains recognizably clean warm ivory; only half-shadow folds receive a subtle peach-beige reflection. The window stays luminous creamy white. Olive is confined to the wall as an object color and never becomes environmental light. Wood is dark mahogany, metal is neutral charcoal, and the deepest shadows retain a clean neutral black point. Do not reinterpret this version as a warmer or cooler gradient.

Use clean dry cotton, intact smooth matte plaster, maintained painted metal, restrained broad wood grain, natural pores and age lines, gentle lens softness, and clear large-form separation. Keep background micro-detail extremely low. The image must feel photographed through lighting, tonal depth, and optical focus rather than added surface noise.

Avoid copied people or rooms, public figures, actors, existing fictional characters, round eyewear, facial hair, hand on waist, deep-open collar, dense drawer grids, repeated handles, exposed stock piles, scattered envelopes, tool clutter, dust, grime, grease, stains, mottling, peeling plaster, dampness, corrosion, tarnish, distressed patina, dirty beige whites, gray-green haze, olive-brown mud, cyan skin, orange skin, global warm filter, sepia, film grain, halation, bloom, fog, texture overlay, aggressive microcontrast, HDR, oversharpening, waxy skin, beauty retouching, symmetrical AI faces, subtitles, text, logo, or watermark.

Round 07 · A | JW-LTBF-02_A_r07.png

Round 07 • Prompt B

文件 : round-07/prompt_B_descriptive.md · SHA-256 :

Prompt B | 描述性原创生成版 | Round 07

用途：完整锁定 Round 06 B 已通过肉眼评价的色彩，只清理背景。禁止出现电影名、导演名、演员名和角色真实姓名；不得传入任何图片。

生成参数

- 生成方式：brand-new text-to-image
- 图像输入：无
- 人物：原创男性维修员 + 原创女性技师
- 场景：原创山地无线电维修间
- Blocking：右中前 / 左后
- 焦距倾向：65mm
- 本轮唯一变量：背景道具数量和高频边缘下降
- 色彩：锁定上一轮 B 的暖红中性结果，不得变冷、变绿、变淡或变橙

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 07 B, independent original cinematic frame

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use no input image, source frame, visual reference, previous output, image-to-image process, recoloring, face transfer, or identity transfer. Invent every person, face, body, garment, prop, room geometry, and narrative detail from scratch.

Create an original mountain radio maintenance room. In the right-center foreground stands a newly invented 36-year-old East Asian man with a rectangular face, high forehead, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and a modest neckline. One hand holds a single burned vacuum tube at lower chest height while the other arm hangs naturally. In the softly defocused left rear, a newly invented 52-year-old East Asian woman with a silver-streaked low bun and charcoal utility apron adjusts one large radio dial.

Build the room from three calm, clearly separated large forms: one broad uninterrupted smooth matte deep neutral-olive wall plane, one compact aligned charcoal-black bakelite radio console used by the woman, and one narrow cleared dark-teak repair bench. Retain one high horizontal ribbed-glass window. Show only what the action requires: one large dial, the burned tube in the man's hand, one closed component tray, and no more than two small neatly wound copper-wire accents. Conceal all cabling. Leave generous clean negative space between window, people, console, bench, and wall. The room is period-functional, dry, orderly, and regularly maintained, never modern, glossy, or sterile.

Use compressed medium-close framing, 65mm lens tendency, camera slightly below eye level around 1.35m, man right of center and woman left rear, with clear front-back separation and natural shallow focus. Bright soft directional

cream-white light enters from the upper left, producing gentle facial modeling, open readable midtones, moderate natural contrast, clean highlight roll-off, and low-chroma neutral-charcoal ambient shadows.

Preserve the approved color balance exactly: the whole frame reads warm-neutral with a clear medium-strong red-amber bias in the midtones, never cyan-led or green-led. Skin carries continuous warm peach-brown, muted rose-brown, and natural terracotta across forehead, temples, cheeks, nose, jaw, neck, ears, and hands; this living warmth remains visible at thumbnail size without isolated blush. Skin highlights are clean cream-peach and skin shadows are low-chroma warm-neutral brown. The shirt stays luminous clean cream-ivory, with restrained peach-beige warmth only in half-shadow folds. The window remains cream-white. The wall remains deep neutral olive, equipment neutral charcoal-black, wood dark teak, and copper accents limited and subordinate. Deep shadows retain a firm clean neutral black point. Cleaning the room must not make the frame cooler, greener, paler, brighter, more desaturated, more orange, or more sepia.

Use broad intact matte surfaces with minimal microtexture, restrained bakelite handling sheen, subdued broad teak grain, compact clean copper accents, natural facial pores, true linen weave, gentle lens softness, stable local contrast, and clear large-form separation. Create photographic character without any added noise layer.

Avoid any film, director, actor, character, or real-person name; copied faces or frames; round eyewear; facial hair; hand on hip; deep-open shirt; dense banks of gauges; repeated meter faces; rows of tiny knobs; multiple radios; exposed coils; groups of tubes; loose wires; open component boxes; stacked cabinets; bottles; scattered tools; foreground clutter; repeated circular details; stained or mottled panels; scratches; grime; grease; dust; smoke; corrosion; oxidation; patina; dirty blacks; muddy brown-green transitions; low-contrast haze; cyan or gray-green skin; orange skin; dirty whites; film grain; halation; bloom; fog; texture overlay; aggressive microcontrast; HDR; plastic skin; beauty retouching; subtitles; text; logo; or watermark.

Round 07 · B | JW-LTBF-02_B_r07.png

Round 07 • Prompt C

文件 : round-07/prompt_C_safe.md · SHA-256 :

Prompt C | 安全原创转译版 | Round 07

用途：让 C 直接采用 A / B 已验证的暖中性色彩层级，同时删除造成灰绿稀释和脏点的背景高频细节。原创人物、原创空间、原创叙事；不得传入任何图片。

生成参数

- 生成方式：brand-new text-to-image
- 图像输入：无
- 人物：原创女性修复师 + 原创男性助理
- 场景：原创市政纺织样本修复室
- Blocking：中左前 / 右后
- 焦距倾向：50mm
- 本轮变量：继承 A / B 色彩结构 + 背景压成少量大色块
- 色彩目标：达到 A / B 的清楚暖红权重，不再作为更冷或更弱的 C 档

Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 07 C, independent original cinematic frame

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use no input image, source frame, visual reference, previous output, image-to-image process, recoloring, face transfer, or identity transfer. Invent every person, face, body, garment, prop, room geometry, and narrative detail from scratch.

Create an original municipal textile conservation studio. A newly invented 56-year-old East Asian woman occupies the center-left foreground. She has an angular face, short silver-gray pixie hair, no eyewear, and wears a clean warm-ivory conservation smock with a high soft neckline and natural gentle creases. She holds one smooth fine-weave neutral-oatmeal textile sample between both hands at chest height and quietly examines it; both hands remain on the sample and away from her waist. In the right rear, a newly invented 24-year-old East Asian man with shoulder-length hair tied in a low ponytail, no facial hair, and an extremely desaturated near-black forest-green work shirt operates one compact clean brass sample press.

Keep the background extremely simple and optically clean: one broad uninterrupted smooth matte muted tobacco-umber wall with a restrained red-brown undertone, one low closed-front charcoal storage cabinet with two large plain panels, one cleared dark-walnut work surface, one compact satin-brass press, and one small square frosted skylight high on the right. No exposed textile stock is needed; communicate the conservation function through the sample in the woman's hands and the single press. At normal viewing size the background must read as a few broad separated color shapes, not a collection of objects.

Use a 50mm lens tendency, camera slightly above eye level around 1.52m, foreground woman center-left and smaller assistant right rear, with more visible but quiet room depth than A or B, natural shallow focus, and no extreme

bokeh. Clear soft cream-white skylight enters from the upper right, creating delicate facial falloff, open readable midtones, moderate natural contrast, clean highlight roll-off, and deep low-chroma neutral-charcoal ambient shadows.

Apply the same successful written color structure as the approved A / B direction: at first glance the entire frame reads warm-neutral, naturally red-warm, and clearly amber-brown in the midtones, never cyan-led, green-led, gray-green, or olive-led. Give the woman continuous face-wide living warmth across forehead, temples, cheeks, nose, jaw, neck, and both hands using warm peach-brown, muted rose-brown, and restrained natural terracotta. This warmth must remain visible across the whole skin area and at thumbnail size, not only in cheeks or ears. Keep clean cream-peach skin highlights and low-chroma warm-neutral-brown skin shadows.

Distribute restrained red warmth through the full midtone structure: living skin, gentle peach-ivory reflections inside the smock's half-shadow folds, muted mahogany in the walnut surface, the tobacco-umber wall, and restrained warm copper in the brass press. The smock remains unmistakably clean warm ivory and the square skylight luminous creamy white. The assistant's near-black forest-green shirt is the only green-family object and must not cast green into the room or skin. Deep shadows keep a clean neutral-charcoal black point. Match the clear warmth and color density of the successful A / B direction; do not fall back to beige-gray. No global warm filter, red wash, orange wash, yellow cast, sepia, or global saturation increase.

Use intact smooth matte plaster with minimal tonal variation, two broad cabinet panels, dark walnut with subdued broad grain, maintained satin brass without oxidation, a smooth fine even textile weave, natural pores and age lines, gentle optical softness, and clear local separation. Keep background micro-detail extremely low. The image should feel photographed through light and tonal depth rather than through added noise.

Avoid any input image, copied person, copied room, public figure, actor, or existing fictional character; exposed textile-roll shelves; stacked rolls; cubby or drawer grids; rows of handles; fabric piles; overlapping cloth; frayed edges; coarse fibers; lint; tool cups; jars; brushes; loose instruments; duplicated objects; decorative vessels; clutter; dust; grime; stains; mottled walls; peeling plaster; dampness; mold; corrosion; tarnish; oxidation; scratches; distressed patina; gray haze; muddy local contrast; olive dominance; cyan or green-gray skin; dirty beige whites; orange or red-painted skin; pink smock; yellow skylight; red shadows; brown blacks; film grain; halation; bloom; fog; texture overlay; HDR; oversharpening; waxy skin; beauty retouching; symmetrical AI faces; subtitles; text; logo; or watermark.

Round 07 · C | JW-LTBF-02_C_r07.png

Round 08

Janet：背景必须叙事；景深表达空间与人物关系；研究设备和模型能力。

唯一主动变量	恢复因果道具；研究设备、镜头和 GPT Image 2 景深边界。
阶段结果	三张仍近 deep focus，景深失败。
生成边界	零图像输入、独立 text-to-image；不使用旧图做 edit target。

原始 feedback.md

上轮判定

- 色彩：Round 07 整体已明显接近目标，本轮锁定，不重做色彩梯度。
- 问题：“干净”被误执行成删除背景物件，使空间变秃，转向了另一种视觉风格。
- 核心修正：背景要继续承担镜头叙事；景深要用来表达空间、人物立场和人物关系，不是将背景完全抹空。
- 项目意义：把风格化的可视觉规律拆成 AI 导演可理解、可测试、可继承的提示词结构。

Round 08 修改边界

- 保留 Round 07 A / B 的暖中性色彩关系，C 继续使用同一结构。
- 恢复能说明工作进度、人物行动和权力位置的背景道具。
- 不恢复随机污渍、重复小件、无意义高频边缘和 AI 涂抹纹理。
- 使用一套共同景深逻辑，避免 A / B / C 在本轮同时变成三种光学试验。
- 所有人物、场景和叙事仍为原创；不向生成器传入原片、候选帧或旧生成图。

本轮变量

- 23. 背景从“少量大色块”改为“少量、有因果、可读的叙事组”。
- 24. 镜头从单纯写 shallow focus 改为明确的三层信息分配：前景主体→背景人物→远处建筑与道具。

25. 数值镜头语言只作风格倾向；可见的清晰度层级才是生成优先级。

当前停止点

Round 08 A / B / C Prompt 写完后停止。本文档不代表生成或冻结。

background-narrative-design.md

原则

背景不再被当作“空出来才会干净”的墙面。每个背景物件必须回答至少一个问题：

26. 这是什么地方？
27. 工作进行到哪一步？
28. 背景人物在做什么？
29. 前后两人的信息、行动或权力差是什么？
30. 房间的深度和通行关系如何？

“干净”由这四件事实现：道具分组清楚、表面完好、不重复、微对比受控。它不再由“删空背景”实现。

A | 地方种子档案室

前景命题

女性主管检查已打开的种子信封，她掌握判断权。

背景叙事组

- 一面有秩序的标本抽屉柜，仅有一个抽屉打开：表明工作正在进行，不是杂乱。
- 三只处于不同处理阶段的种子袋：一只密封、一只只有标签、一只待入库；只显示大形体，不生成可读文字。
- 中景分拣桌上的浅秤盘、三个平放信封和一只哑光铜碗：说明检验流程。
- 背景男助理查看唯一打开的抽屉：他执行主管之后的实际操作。
- 窄条铁丝磨砂窗、空手推车和一只空箱：表明货物刚被移进空间，并建立前后景距离。

空间组织

将道具收成三组：抽屉柜 / 男助理，分拣桌 / 信封，窗 / 手推车。三组之间保留暗色墙面和通行空间，防止变成高频堆满。

B | 山地无线电维修间

前景命题

男维修员拿着烧毁的真空管，他已经发现故障的物证；后景女技师仍在确认信号端。

背景叙事组

- 一台主控台，保留一个明显打开的检修舱；舱内用宽大空位和未亮的大灯罩表达缺件，与前景烧毁的真空管形成因果，不要求景深之外的小插座或小灯点保持锐利。
- 女技师只操作一个大旋钮：保留行动可读性，避免重复仪表脸。
- 一本打开的维修记录、一张信号图、一卷导线与一只关闭元件盒：表明有追查过程；纸面只出现不可读的线形，不生成文字。
- 高位横向纹理玻璃窗与天线引入件：窗光指明方向，引入件表明房间与外部信号的关系。

空间组织

将道具收成三组：主控台 / 女技师，维修桌 / 记录与导线，高窗 / 天线引入件。每组之间必须有清楚边界，所有表面干燥完好，但房间不能变成空影棚。

C | 市政纺织样本修复室

前景命题

女修复师检查一块已处理的织物样本；后景助理使用黄铜压板，显示两人分工和不同经验层级。

背景叙事组

- 远处悬挂一块部分修复的纺织面板：仅保留大块修复线和明暗分区，不出现粗纤维或破损毛边。

- 一只低矮档案柜，上面只有三只宽大盒子，其中一只打开并显示折叠样本：表明归档进度。
- 一个测量框和一卷卷起的样本：保留工作方法，不增加工具杯、瓶罐和零散刷子。
- 背景男助理与紧凑黄铜压板：双手操作可读，脸部微细节下降。
- 右上方小方形磨砂天窗：提供光线来源和远平面锦标。

空间组织

将道具收成三组：悬挂面板 / 档案柜，测量框 / 卷样，黄铜压板 / 男助理。背景必须是有信息的低频空间，而不是空白色块或细节堆。

共同负面约束

- 不要空墙影棚、奶油散景墙、无功能装饰物。
- 不要随机小件、重复把手、重复仪表、重复盒子、无因果堆叠。
- 不要污渍、灰尘、油脂、氧化、斑驳、脱落、雾、颗粒或纹理叠层。
- 不要把背景人物模糊成无身份的人形色块。
- 不要让背景每个纹理与前景同样锐利。

camera-lens-dof-research.md

结论先行

公开资料能支持《让子弹飞》使用 ARRICAM LT / ST 与 ARRIFLEX 235、Cooke 和 Angénieux 镜头、35mm Kodak Vision3 250D 5207 / 500T 5219、Super 35 及 2.35:1 画幅。但没有找到这一具体镜头的 camera report，因此不能把某一个焦段、Cooke 系列、Angénieux 型号或 T-stop 写成原片事实。

Round 08 选用 `Super 35 spherical / 75mm tendency / approximately T3.2 / focus around 3.5m` 作为共同测试假设，而不是对历史设备的声称。这一假设的作用是提供中长焦倾向、适度空间压缩和中等浅景深的视觉起点。

一、可核实的制作信息

| 项目 | 目前证据 | 证据强度 | 写入 Prompt 时的边界 |

| --- | --- | --- | --- |
 | 摄影指导 | 赵非 | 高 | 只记录于内部研究，不用于 B / C |
 | 摄影机 | ARRICAM LT、ARRICAM ST、ARRIFLEX 235 | 中 | 可作制作层参考，无法确认具体帧使用哪台 |
 | 镜头品牌 | Cooke、Angénieux | 中 | 不自行补成 Cooke S4 / S4i 或某款 Optimo |
 | 负片 | Kodak Vision3 250D 5207、500T 5219 | 中 | 可用于理解日光 / 灯光制式与宽容度，不伪造调色参数 |
 | 影像格式 | Super 35、2K DI、2.35:1 | 中至高 | 可作画幅和透视语言参考 |
 | 具体镜头焦段 / T-stop | 未找到 camera report | 不可确认 | 只能写“根据画面结果推测”或“测试假设” |

资料入口：

- [IMDb Technical Specifications](https://www.imdb.com/title/tt1533117/technical/)
- [ARRI 归档摄影机系统](https://www.arri.com/en/learn-help/learn-help-camera-system/config-overview/archive)
- [ARRI Super 35 格式技术资料](https://www.arri.com/resource/blob/75848/e5caf96582684a0f588aaf9310a024b7/2-7-1-ground-glasses-and-masks-din-super-35-formats-data.pdf)
- [TheaterByte Blu-ray Review](https://www.theaterbyte.com/let-the-bullets-fly-blu-ray-review/)
- [英皇电影官方片页](https://www.emp.hk/cs/production/all/let-the-bullets-fly)

二、根据母图画面结果推测

母图是 3840 × 1632，画幅比约 2.35:1；文件中没有可用的焦段、焦点距离或光圈元数据。以下都只是根据可见结果推测：

- 焦平面落在右侧前景人物的眼镜、耳部、胡须轮廓和衣领附近。
- 左后方人物明显脱焦，但头肩轮廓、张口状态、向前姿态和行动方向仍可读。
- 窗格、百叶、家具和道具没有被删除，而是被压成低频形体；背景的微纹理模糊，叙事信息仍在。
- 前景主体距摄影机可先以 3.2–4.0m 测试；背景人物约 5–6m；两人前后距离约 1.5–2m；窗与墙体约 6–8m。
- 若以 Super 35 球面镜头作测试，观感更接近 58–75mm 中长焦倾向，而不是广角。
- 景深强度更像 T2.8–T4 的中等浅景深，不是追求极端散景的全开光圈。

三、Round 08 的数值假设

本轮 A / B / C 统一使用：

- 格式倾向：Super 35 spherical
- 焦段倾向：75mm
- 光圈倾向：approximately T3.2
- 前景对焦距离：about 3.5m
- 背景人物距离：about 5.0–5.3m
- 远处建筑距离：about 6.5–7.0m

理论上，若按 75mm、T3.2、对焦 3.5m、容许弥散圈 0.025mm 粗略估算，可接受的清晰范围约为 3.34–3.68m。这只是帮助设计前后距离的光学参考，不是原片测量值，也不代表图像模型会进行这一运算。

四、“干净”与风格的重新定义

赵非在公开采访中将影像风格概括为“主观的现实主义”，并提到与姜文“坚决反对脏乱差”；同时，灯光和氛围要根据故事、人物与调度建立。这两点并不矛盾：反对的是没有叙事价值的脏乱，不是删掉场景信息。

Round 08 因此采用这个区分：

- 应删除：随机斑渍、AI 脏点、重复小件、无因果的道具、破损堆叠、频率过高的材质纹理。
- 应保留：能说明工作状态、空间用途、人物位置、权力关系和行动结果的道具。
- 应用景深处理：背景信息保持形体、位置和功能可读，仅将微纹理、文字和人脸细节降一级。

访谈参考：

- [人间福报：赵非谈《让子弹飞》摄影](<https://www.merit-times.com.tw/NewsPage.aspx?unid=246009>)
- [搜狐娱乐：赵非采访](<https://yule.sohu.com/20101206/n278110818.shtml>)

五、本轮不能宣称的事

- 不能宣称该母图确定使用 75mm 或 T3.2。
- 不能宣称确定使用 Cooke S4 / S4i 或某一支 Angénieux Optimo。
- 不能把景深估算写成 Resolve、现场摄影或镜头元数据。
- 不能只靠一串摄影参数声称精确复刻。

[gpt-image-2-depth-control.md](#)

结论

`gpt-image-2` 能理解 lens、aperture、focus plane、depth of field 等摄影语言，但它不是带真实镜头方程的物理渲染器。官方 API 没有 `focal\_length`、`aperture`、`f\_stop`、`focus\_distance`、`depth\_of\_field`、`sensor\_size`、`camera\_model` 或 `seed` 字段；这些只能出现在自然语言 Prompt 里。

官方 Prompting Guide 也明确提醒：详细 camera specs 可能只被宽松理解，更适合引导高层观感和构图，不适合当作精确物理模拟。

官方资料：

- [GPT Image 2 模型页](<https://developers.openai.com/api/docs/models/gpt-image-2>)
- [Image generation guide](<https://developers.openai.com/api/docs/guides/image-generation>)
- [Images API generate reference](<https://developers.openai.com/api/reference/resources/images/methods/generate>)
- [GPT Image prompting guide](<https://developers.openai.com/cookbook/examples/multimodal/image-gen-models-prompting-guide>)

一、能承载什么

- 能承载：中长焦观感、适度空间压缩、浅景深、焦点落在某只眼睛、后方人物下降一级清晰度、远处建筑保留可读形体。
- 可以识别为风格线索：`Super 35 spherical, 75mm cine-lens tendency, approximately T3.2`。
- 不能保证：按容许弥散圈精确计算景深、按真实镜头呼吸量或像场曲率运算、在不同生成间保持可复现的同一个虚化强度。

二、控制策略

稳定顺序不是“先写 75mm / T3.2”，而是：

31. 明确焦平面在哪个视觉特征上。
32. 明确主体哪些细节需要清晰。
33. 明确背景人物哪些叙事信息必须可读，哪些微细节应合并。
34. 明确窗、家具和道具要保留形体、位置和材质身份。
35. 明确虚化必须是连续光学衰减，不能是人像模式抠图、边缘光晕或整层 Gaussian blur。
36. 最后再把焦段和 T-stop 当作次级视觉线索。

三、Round 08 共同景深模块

```text

DEPTH STAGING — semantic instructions have priority; numerical camera values are secondary visual cues only:

Use one coherent optical focal plane on the foreground subject's nearer eye. Resolve the iris, eyelash line, facial plane, lip or moustache contour, and the nearest collar seam naturally, without digital oversharpening.

Place the secondary figure about 1.5 to 1.8 meters behind that focal plane. Keep this person's silhouette, posture, gaze direction, hand action, and dramatic intention clearly readable, while

merging individual facial micro-detail by one visible focus tier. The secondary person must remain a character, not dissolve into anonymous blur.

Keep the rear windows, shutters, furniture arrangement, and selected story-bearing props recognizable as broad coherent shapes with readable placement and material identity. Reduce their fine texture and local contrast, but do not remove them, replace them with an empty wall, or turn them into creamy bokeh blobs.

Create smooth continuous lens falloff through the foreground subject, secondary person, and rear architecture. No uniform Gaussian blur, smartphone portrait-mode segmentation, cutout edges, blur halos around hair or shoulders, mixed-focus errors, miniature effect, extreme bokeh, blank background, or indiscriminately sharp background microtexture.

Camera cue — not a verified production setting and not a physical renderer control: Super 35 spherical, 75mm cine-lens tendency, approximately T3.2, foreground focus around 3.5 meters. If a numerical cue conflicts with the visible focus hierarchy above, obey the visible focus hierarchy.

...

#### 四、API 层边界（本轮不接 API）

官方 API 可控制的是 model、prompt、size、quality、background、output format、compression、moderation、n 等生成层参数，不包含光学景深字段。

若未来单独做 API 试验，`2560x1088` 约为 2.353:1，两条边都是 16 的倍数，可作 2.35:1 测试尺寸。但当前任务明确禁止接 API，本轮只写 Prompt，不实现任何调用。

#### 五、测试方法

Round 08 A / B / C 共用 75mm / T3.2 假设，目的是只验证“叙事背景 + 语义景深”能否同时成立。

如果这一轮完成后需要真正比较光学倾向，应另开一个固定人物、固定空间、固定色彩的专项 bracket：

- 65mm / T2.8
- 75mm / T3.2
- 85mm / T4

不把这三档混入当前 A / B / C，否则会把角色、场景和光学变量绑在一起，无法判断为什么成功。

## Round 08 • Prompt A

### # Prompt A | 内部视觉研究版 | Round 08

用途：内部研究母图中“前景权力主体清晰、后景行动人物脱焦但可读、远处建筑承担空间信息”的规律。生成内容仍为原创人物、原创空间和原创叙事；不引用或传入原片。

### ## 生成参数意图

- 生成方式：brand-new text-to-image
- 图像输入：无
- 画幅：2.35:1
- 人物：原创女性档案主管 + 原创男性助理
- 场景：原创地方种子档案室
- Blocking：左前 / 右后
- 数值镜头线索：Super 35 spherical / 75mm tendency / approximately T3.2 / focus around 3.5m
- 数值性质：测试假设，不是原片参数，不是物理渲染控件
- 本轮变量：恢复叙事背景 + 明确三层语义景深
- 锁定项：Round 07 A 的暖中性色彩、人物关系、左后窗光和主体位置

### ## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 08 A, independent original cinematic frame

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, visual reference, previous output, image-to-image process, edit, recoloring, face transfer, or identity transfer. Invent every person, face, body, garment, prop, room geometry, and narrative detail from scratch. Do not resemble any actor, public figure, or existing fictional character.

### ### Original scene and dramatic relationship

Create an original regional seed archive whose background visibly explains its work. A newly invented 42-year-old East Asian woman occupies the left foreground and examines one opened paper seed envelope with both hands at chest level. She is the senior archive supervisor and holds the decision-making position in the frame. Give her a broad oval face, short straight side-parted hair tucked behind one ear, no eyewear, and a clean collarless warm-ivory cotton work shirt with matte fibers and natural soft creases. Keep both hands on the envelope and away from her waist.

About 1.6 meters behind her on the right, a newly invented 28-year-old East Asian male assistant with a narrow face, dense natural curls, no facial hair, and a dark-brown utility vest checks the only open specimen drawer. His smaller scale, rear position, and task-oriented posture make the working hierarchy readable without caricature.

### ### Narratively populated background

Preserve a fully populated, narratively functional room. Cleanliness must come from coherent grouping, intact maintained surfaces, restrained microcontrast, and optical depth hierarchy, never from removing the room's story-bearing objects.

Arrange the background in three separated functional clusters:

1. On the right rear, one orderly charcoal metal specimen-drawer bank with broad fronts and restrained handles. Exactly one drawer is open and being checked by the assistant; all other drawers are closed and aligned.
2. In the middle ground, one dark-mahogany sorting bench holding one shallow weighing tray, exactly three flat paper seed envelopes, and one small muted-copper bowl. Behind it, hang exactly three large cotton seed sacks in different workflow states: one sealed, one tagged with an unreadable plain marker, and one awaiting storage.
3. On the left rear, one narrow vertical wired-frosted window, one simple empty handcart, and one empty wooden crate, suggesting stock was recently moved into the archive.

Keep clear wall intervals and a readable passage between these clusters. Every object must contribute to archive function, workflow state, front-back distance, or character action. Do not turn the room into an empty studio, a blank wall, or a collection of unrelated decoration. Do not generate readable writing.

#### ### Composition and optical depth

Use a medium-close observational composition with imperfect asymmetry. Camera at eye level around 1.45 meters. The woman remains dominant in the left foreground; the smaller assistant remains right rear; the bench bridges them; the window and handcart establish the far plane. Use restrained normal-to-short-telephoto spatial compression rather than wide-angle expansion.

DEPTH STAGING — the visible semantic focus hierarchy has priority; numerical camera values are secondary visual cues only.

Use one coherent optical focal plane on the woman's nearer eye. Resolve her iris, eyelash line, facial plane, lips, fingers, envelope edge, and nearest shirt-collar seam naturally, without digital oversharpening. Keep real skin pores, age lines, and fabric weave present but not hyper-detailed.

Place the male assistant about 1.5 to 1.8 meters behind the focal plane. Keep his silhouette, curly-hair mass, forward checking posture, gaze direction, hand action, and relationship to the open drawer clearly readable, while merging individual facial micro-detail by one visible focus tier. He must remain a specific acting character, not dissolve into an anonymous human-shaped blur.

Keep the drawer bank, seed sacks, sorting bench, window lattice, handcart, crate, and workflow props recognizable as broad coherent shapes with readable placement and material identity. Reduce fine texture, tiny edges, and local contrast progressively with distance, but do not remove these objects or turn them into creamy bokeh blobs.

Create smooth continuous lens falloff through the foreground woman, assistant, and rear architecture. No uniform Gaussian blur, smartphone portrait-mode segmentation, cutout edges, blur halos around hair or shoulders, mixed-focus errors, miniature effect, extreme bokeh, blank creamy background, or indiscriminately sharp background microtexture.

Camera cue — not a verified production setting and not a physical renderer control: Super 35 spherical, 75mm cine-lens tendency, approximately T3.2, foreground focus around 3.5 meters, assistant around 5.1 meters, rear wall and

window around 6.8 meters. If a numerical cue conflicts with the visible focus hierarchy above, obey the visible focus hierarchy.

### ### Light and locked color

Soft cream-white window light enters from the left rear and passes through the archive in visible depth. It gives the foreground woman gentle facial modeling and a clean highlight roll-off; the rear assistant receives the same source at lower intensity, which keeps him in the same room without competing for attention. Keep open readable midtones, moderate natural contrast, and low-chroma neutral-charcoal shadows. Do not use haze as a depth device.

Lock the successful warm-neutral color balance from the previous A direction. At first glance the frame reads warm-neutral with a restrained but clearly visible red-amber midtone bias, never cyan-led or green-led. Give the woman continuous face-wide living warmth across forehead, temples, cheeks, nose, jaw, neck, ears, and hands using natural warm peach-rose, muted rose-brown, and soft terracotta. Keep clean cream-peach skin highlights and low-chroma warm-neutral-brown skin shadows.

The shirt remains recognizably clean warm ivory; only half-shadow folds receive a subtle peach-beige reflection. The window stays luminous creamy white. Deep neutral olive belongs only to the wall as an object color and must not become environmental light. Wood is dark mahogany, equipment neutral charcoal, copper restrained, and the deepest shadows retain a clean neutral black point. Do not make this version cooler, greener, paler, more orange, more red, more yellow, or more sepia.

### ### Material and cleanliness

Use clean dry cotton, intact smooth matte plaster, maintained painted metal, restrained broad wood grain, natural facial texture, gentle lens softness, stable local contrast, and clear large-form separation. The room may be established and regularly used, but age is visible only through softened wood edges and discreet repaired joinery. Photographic richness must come from light, tonal depth, object relationships, and optical falloff rather than noise or damage.

Avoid copied people or rooms; public figures; actors; existing fictional characters; round eyewear; facial hair; hand on waist; deep-open collar; empty background; blank wall; creamy bokeh field; erased furniture; dense drawer grids; repeated handles; random sacks; stock piles; tool clutter; unrelated vessels; duplicated props; readable text; random labels; dust; grime; grease; stains; mottling; peeling plaster; dampness; corrosion; tarnish; distressed patina; dirty beige whites; gray-green haze; cyan or olive skin; orange-painted skin; global warm filter; red wash; sepia; film grain; halation; bloom; fog; texture overlay; aggressive microcontrast; HDR; oversharpening; waxy skin; beauty retouching; symmetrical AI faces; malformed hands; subtitles; logo; or watermark.

### ## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 08 B, independent original cinematic frame

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, visual reference, previous output, image-to-image process, edit, recoloring, face transfer, or identity transfer. Invent every person, face, body, garment, prop, room geometry, and narrative detail from scratch. Do not use or imply any film title, director, actor, named character, public figure, real person's identity, or existing fictional character.

### ### Original scene and dramatic relationship

Create an original mountain radio maintenance room at the moment a failure has been identified. In the right-center foreground stands a newly invented 36-year-old East Asian male repairer with a rectangular face, high forehead, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and modest neckline. One hand holds a single burned vacuum tube at lower chest height while the other arm hangs naturally. His quiet inspection of the damaged tube is the dominant action.

About 1.6 meters behind him on the left, a newly invented 52-year-old East Asian female technician with a silver-streaked low bun and charcoal utility apron adjusts one large radio dial. Her rear position and ongoing verification establish a second stage of the same problem rather than an unrelated background extra.

### ### Narratively populated background

Preserve a fully populated, narratively functional room. Cleanliness must come from coherent grouping, intact maintained surfaces, restrained microcontrast, and optical depth hierarchy, never from removing the room's story-bearing objects.

Arrange the background in three separated functional clusters:

1. Behind the woman, one compact aligned charcoal-black bakelite radio console. One visibly open tube-service bay exposes one oversized empty socket as a broad circular absence beside one wide unlit indicator lens, creating a cause-and-effect relationship with the burned tube in the man's hand that remains readable at reduced focus. The woman operates exactly one large dial. Keep all other controls broad, few, and subordinate.
2. In the middle ground, one narrow dark-teak repair bench holding one open service log with abstract unreadable line marks, one simple signal chart with no readable writing, one neatly coiled lead, one restrained copper spool, and one closed component tray. These items show a traceable repair process, not decorative clutter.
3. On the rear wall, one high horizontal ribbed-glass window and one simple antenna feed-through. Their placement explains the upper-left light source and connects this room to an external signal system.

Leave clear wall intervals and a readable passage between console, bench, people, and window. Every object must explain the fault, the investigation, the room's function, the front-back distance, or the characters' division of labor. Do not turn the room into an empty set or a dense wall of equipment. Do not generate readable text, numbers, labels, or meter markings.

### ### Composition and optical depth

Use a compressed medium-close observational composition. Camera slightly below eye level around 1.35 meters. The man remains dominant right of center in the foreground; the smaller woman remains left rear at the console; the repair bench bridges their two stages of action. Use restrained normal-to-short-telephoto spatial compression and no wide-angle distortion.

DEPTH STAGING — the visible semantic focus hierarchy has priority; numerical camera values are secondary visual cues only.

Use one coherent optical focal plane on the man's nearer eye. Resolve the iris, eyelash line, forehead plane, lips, the burned tube edge, fingers, and nearest shirt-collar seam naturally, without digital oversharpening. Keep natural pores and linen weave present but not hyper-detailed.

Place the female technician about 1.5 to 1.8 meters behind the focal plane. Keep her silhouette, low-bun shape, gaze toward the console, hand on the large dial, and technical intention clearly readable, while merging individual facial micro-detail by one visible focus tier. She must remain a specific acting character, not dissolve into anonymous blur.

Keep the open service bay, oversized empty-socket shape, broad unlit indicator lens, console mass, open log, signal chart, coiled lead, closed tray, window, and antenna feed-through recognizable through placement and broad material identity. Read the fault through the large missing-tube shape and the man's matching burned component, never through tiny markings or selectively sharpened details. Fine surface texture softens continuously with distance.

Create smooth continuous lens falloff through foreground man, rear woman, console, and wall. No uniform Gaussian blur, smartphone portrait-mode segmentation, cutout edges, blur halos around hair or shoulders, mixed-focus errors, miniature effect, extreme bokeh, blank creamy background, or indiscriminately sharp background microtexture.

Camera cue — not a verified production setting and not a physical renderer control: Super 35 spherical, 75mm cine-lens tendency, approximately T3.2, foreground focus around 3.5 meters, rear woman around 5.1 meters, wall and window around 6.8 meters. If a numerical cue conflicts with the visible focus hierarchy above, obey the visible focus hierarchy.

### ### Light and locked color

Bright soft directional cream-white light enters from the upper left. It shapes the man's face and ivory shirt, continues across the repair bench, and reaches the woman and console at lower intensity. Keep open readable midtones, moderate natural contrast, clean highlight roll-off, firm but not crushed black points, and low-chroma neutral-charcoal ambient shadows. Establish depth with illumination ratios and optical falloff, never with fog or gray haze.

Preserve the approved warm-neutral color balance exactly. The whole frame reads warm-neutral with a clear medium-strong red-amber bias in the midtones, never cyan-led or green-led. Skin carries continuous warm peach-brown, muted rose-brown, and natural terracotta across forehead, temples, cheeks, nose, jaw, neck, ears, and hands; this living warmth remains visible at thumbnail size without isolated blush. Skin highlights are clean cream-peach and skin shadows are low-chroma warm-neutral brown.

The shirt stays luminous clean cream-ivory with restrained peach-beige warmth only in half-shadow folds. The window remains cream-white. The wall remains deep neutral olive as an object color only, equipment neutral charcoal-black, wood dark teak, and copper accents limited and subordinate. Deep shadows retain a firm clean neutral black point. Restoring the background must not make the frame cooler, greener, paler, brighter, more desaturated, more orange, more red, or more sepia.

### ### Material and cleanliness

Use broad intact matte wall surfaces, maintained bakelite with restrained handling sheen, subdued broad teak grain, compact clean copper accents, true linen weave, natural facial texture, gentle optical softness, stable local contrast, and clear large-form separation. Keep the room dry, functional, established, and regularly maintained. Photographic richness must come from purposeful equipment relationships, light, tonal depth, and focus falloff, not added dirt or noise.

Avoid any film, director, actor, named character, public figure, real-person identity, copied face, or copied frame; round eyewear; facial hair; hand on hip; deep-open shirt; empty background; blank wall; creamy bokeh field; erased console; dense banks of gauges; repeated meter faces; rows of tiny knobs; multiple radios; multiple tube groups; loose-wire tangles; open component boxes; stacked cabinets; bottles; scattered tools; repeated circular details; readable text; random labels; stained or mottled panels; scratches; grime; grease; dust; smoke; corrosion; oxidation; patina; dirty blacks; muddy brown-green transitions; low-contrast haze; cyan or gray-green skin; orange-painted skin; dirty whites; film grain; halation; bloom; fog; texture overlay; aggressive microcontrast; HDR; oversharpening; plastic skin; beauty retouching; malformed hands; subtitles; logo; or watermark.

- 锁定项：Round 07 C 的暖中性红琥珀色彩、人物关系、右上天窗光和白衣层级

### ## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 08 C, independent original cinematic frame

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, visual reference, previous output, image-to-image process, edit, recoloring, face transfer, or identity transfer. Invent every person, face, body, garment, prop, room geometry, and narrative detail from scratch. Do not use or imply any film title, director, actor, named character, public figure, real person's identity, existing fictional character, recognizable scene, or recognizable production design.

### ### Original scene and dramatic relationship

Create an original municipal textile-sample conservation studio during a controlled repair workflow. A newly invented 56-year-old East Asian female conservator occupies the center-left foreground. Give her an angular face, short silver-gray pixie hair, no eyewear, and a clean warm-ivory conservation smock with a high soft neckline and natural gentle creases. She holds one smooth fine-weave neutral-oatmeal textile sample between both hands at chest height and quietly evaluates its repaired surface. Keep both hands on the sample and away from her waist. Her stillness and foreground scale establish experience and judgment.

About 1.6 meters behind her on the right, a newly invented 24-year-old East Asian male assistant with shoulder-length hair tied in a low ponytail, no facial hair, and an extremely desaturated near-black forest-green work shirt operates one compact maintained brass sample press. His active rear task and smaller scale establish apprenticeship and division of labor without copying any existing characters or scene.

### ### Narratively populated background

Preserve a fully populated, narratively functional studio. Cleanliness must come from coherent grouping, intact maintained surfaces, restrained microcontrast, and optical depth hierarchy, never from deleting the room's story-bearing objects.

Arrange the background in three separated functional clusters:

1. On the far left rear, one partially repaired hanging textile panel above one low charcoal archive cabinet. Show only three broad archive boxes on the cabinet; exactly one box is open and contains one folded sample. The hanging panel shows broad repair zones and a few smooth continuous repair seams, never frayed micro-fibers.
2. In the middle ground, one simple measuring frame and one rolled sample rest on a cleared dark-walnut work surface. These two objects explain measurement and comparison without introducing tool cups, jars, brushes, or fabric piles.
3. On the right rear, the male assistant operates one compact satin-brass sample press beneath one small square frosted skylight. The assistant's hand action, the press, and the light source form one readable action cluster.

Leave clear muted tobacco-umber wall intervals and a readable passage between these clusters. Every object must explain conservation stage, storage state, measurement, apprenticeship, front-back distance, or light direction. Do not turn the studio into an empty gallery, a blank wall, a decorative interior, or a dense warehouse. Do not generate readable text or labels.

### ### Composition and optical depth

Use a medium-close observational composition with quiet asymmetry. Camera slightly above eye level around 1.52 meters. The woman remains dominant center-left in the foreground; the smaller assistant remains right rear at the press; the measuring surface bridges them; the hanging panel and skylight establish the far plane. Use restrained normal-to-short-telephoto compression and no wide-angle distortion.

DEPTH STAGING — the visible semantic focus hierarchy has priority; numerical camera values are secondary visual cues only.

Use one coherent optical focal plane on the woman's nearer eye. Resolve her iris, eyelash line, angular facial plane, lips, fingertips, sample edge, and nearest smock-collar seam naturally, without digital oversharpener. Keep natural pores, age lines, fine even textile weave, and cloth seams present but not hyper-detailed.

Place the male assistant about 1.5 to 1.8 meters behind the focal plane. Keep his ponytail silhouette, forward operating posture, gaze toward the press, both-hand action, and apprentice role clearly readable, while merging individual facial micro-detail by one visible focus tier. He must remain a specific acting character, not dissolve into an anonymous human-shaped blur.

Keep the hanging repaired panel, archive cabinet, three broad boxes, open folded sample, measuring frame, rolled sample, brass press, and frosted skylight recognizable as broad coherent shapes with readable placement and material identity. Reduce fine fibers, tiny seams, and local contrast progressively with distance, but do not remove these objects or turn them into creamy bokeh blobs.

Create smooth continuous lens falloff through the foreground woman, rear assistant, and far architecture. No uniform Gaussian blur, smartphone portrait-mode segmentation, cutout edges, blur halos around hair or shoulders, mixed-focus errors, miniature effect, extreme bokeh, blank creamy background, or indiscriminately sharp background microtexture.

Camera cue — not a verified production setting and not a physical renderer control: Super 35 spherical, 75mm cine-lens tendency, approximately T3.2, foreground focus around 3.5 meters, rear assistant around 5.1 meters, hanging panel and skylight around 6.8 meters. If a numerical cue conflicts with the visible focus hierarchy above, obey the visible focus hierarchy.

### ### Light and locked color

Clear soft cream-white skylight enters from the upper right. It gives the foreground woman's face and warm-ivory smock delicate falloff, continues across the measuring surface, and reaches the assistant and press at lower intensity. Keep open readable midtones, moderate natural contrast, clean highlight roll-off, firm but not crushed black points, and deep low-chroma neutral-charcoal ambient shadows. Establish depth with light ratios and optical falloff, never with fog or gray haze.

Lock the successful warm-neutral color structure. At first glance the entire frame reads warm-neutral, naturally red-warm, and clearly amber-brown in the midtones, never cyan-led, green-led, gray-green, or olive-led. Give the woman continuous face-wide living warmth across forehead, temples, cheeks, nose, jaw, neck, ears, and both hands using warm peach-brown, muted rose-brown, and restrained natural terracotta. This warmth remains visible across the whole skin area and at thumbnail size, not only in cheeks or ears. Keep clean cream-peach skin highlights and low-chroma warm-neutral-brown skin shadows.

Distribute restrained red warmth through the full midtone structure: living skin, gentle peach-ivory reflections inside the smock's half-shadow folds, muted mahogany in the walnut surface, the tobacco-umber wall, and restrained warm copper in the brass press. The smock remains unmistakably clean warm ivory and the skylight luminous creamy white. The assistant's near-black forest-green shirt is the only green-family object and must not cast green into the room or skin. Deep shadows keep a clean neutral-charcoal black point. Restoring background information must not reduce the approved red-amber weight or make the frame beige-gray, cyan, green, orange, yellow, red-washed, or sepia.

### ### Material and cleanliness

Use intact smooth matte plaster with controlled broad tonal variation, maintained archive boxes, dark walnut with subdued broad grain, satin brass without oxidation, smooth fine even textile weave, natural facial texture, gentle optical softness, stable local contrast, and clear large-form separation. The studio is well-kept but actively used. Photographic richness must come from the repair workflow, material hierarchy, light, tonal depth, and focus falloff rather than dirt or noise.

Avoid any input image, copied person, copied room, public figure, actor, named character, existing fictional character, recognizable production design, or recognizable scene; empty background; blank wall; creamy bokeh field; erased furniture; exposed textile-roll shelves; stacked rolls; cubby grids; dense drawer grids; rows of handles; fabric piles; overlapping cloth; frayed edges; coarse fibers; lint; tool cups; jars; brushes; loose instruments; duplicated objects; decorative vessels; readable text; random labels; clutter; dust; grime; stains; mottled walls; peeling plaster; dampness; mold; corrosion; tarnish; oxidation; scratches; distressed patina; gray haze; muddy local contrast; olive dominance; cyan or green-gray skin; dirty beige whites; orange-painted or red-painted skin; pink smock; yellow skylight; red shadows; brown blacks; film grain; halation; bloom; fog; texture overlay; HDR; aggressive microcontrast; oversharpening; waxy skin; beauty retouching; symmetrical AI faces; malformed hands; subtitles; logo; or watermark.

| 生成边界   | 零图像输入、独立 text-to-image；不使用旧图做 edit target。 |

原始 feedback.md

Round 08 判定

- Janet 未观察到明确景深。
- 该判定成立：Round 08 A / B / C 都没有建立一眼可辨的前清后虚关系。
- A 的后景男助理、抽屉把手和种子袋纹理依然接近清晰。
- B 的后景女技师、发髻、手部、旋钮、机柜内部和桌面纸张都可分辨，接近 deep focus。
- C 的后景男助理、黄铜压机、档案盒和远墙纺织补片都过于清楚。
- 母图中的后景人物已经看不清独立的眼、鼻、嘴和手指，只保留头肩轮廓、张口状态、前倾姿态和人物位置。Round 08 没有达到这一层级。

方法纠错

Round 08 不作为景深通过样本，也不继续局部修补原 Prompt。Round 09 重新建立严格单变量测试：

- 三版使用同一原创场景、人物、blocking、机位、焦段倾向、光线、色彩和叙事道具。
- 只改变焦平面厚度和背景失焦层级。
- 三份 Prompt 优先变短；景深指令紧跟生成声明，标为最高优先级。
- 背景叙事只通过大形体、色块、位置、头部朝向、躯干前倾和手臂方向读取。
- 不再要求后景人物的 gaze direction、五官、手指或小道具保持清晰。

## 本轮停止点

先完成 Round 09 A / B / C 新 Prompt，不立即生成图像。

### failure-analysis.md

## 我在 Round 08 做了什么

Round 08 并非没有写景深。三份 Prompt 都写了：

- 焦平面在前景人物近眼。
- 背景人物位于焦平面之后。
- 从前景到背景建筑使用连续光学衰减。
- 数值线索为 `Super 35 / 75mm / approximately T3.2`。
- 禁止人像模式抠图、边缘光晕和整层 Gaussian blur。

问题不是“没写”，而是“景深要求被更多、更强的反向指令抵消了”。

## 一、“背景叙事可读”被模型执行成“背景全部清楚”

Round 08 在景深段反复使用：

- `clearly readable`
- `recognizable`
- `readable placement and material identity`
- `remain a specific acting character`
- `not dissolve into anonymous blur`

这些词同时要求模型保留背景人物的头发、面部、手部、道具关系和材质身份。对于图像模型，最保守的同时满足方式就是把整个房间画清楚。

## 二、“只下降一级”远弱于母图

Round 08 使用 `one visible focus tier softer`。母图的后景人物实际上下降了两到三个可见清晰层级：

- 头肩和动作仍在。
- 五官边界已合并。
- 手指、衣料织纹和背景小件不再可分辨。

因此 Round 08 的强度标准本身就太弱。

### 三、道具密度压过了景深权重

三份 Prompt 都约 70 行，要求多组精确数量、小件、机械部件、标签、抽屉、纸张和材质。景深段被埋在大量 scene nouns、exact counts、颜色和长负面词表之间。模型用全景清晰来保全这些约束。

### 四、数字不会替我们计算景深

‘75mm / T3.2 / 3.5m / 5.1m / 6.8m’ 是语义线索，不是 GPT Image 2 的物理光学控件。虽然 Round 08 已在文档中正确声明这一点，但实际 Prompt 仍对数字期待过高，可见结果指令又不够强。

### 五、A / B / C 同时换了场景，不是景深对照

Round 08 A 是种子档案室，B 是无线电维修间，C 是纺织修复室。人物、房间、道具、blocking 和材质也全部不同，因此它们不能证明三档景深的差别。

### Round 09 直接修正

- 使用同一个原创无线电维修间。
- 共同部分逐字锁定，只替换景深段。
- 将 ‘SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT’ 放在生成声明后立即执行。
- 背景人物的叙事只靠 silhouette、head orientation、body lean、arm direction 和 blocking。
- 背景物件只靠 silhouette、tonal block、position 和 color mass。
- 不再写背景 ‘gaze direction’，因为它会反向要求眼部细节。

- 删除 `not dissolve into anonymous blur`、`readable material identity` 和景深段内的小道具清单。
- 负面约束只保留：禁止 deep focus、focus stacking、multiple sharp planes、portrait-mode cutout、edge halo 和整层 Gaussian blur。

## dof-bracket-design.md

### 测试问题

在不删除背景叙事物、不使用原片或旧图作为图像输入的前提下，GPT Image 2 能否生成一眼可辨的三层景深？

### 共同锁定项

| 变量 | A / B / C 共同值 |  
| --- | --- |  
| 生成方式 | 三次独立 brand-new text-to-image，零图像输入 |  
| 场景 | 同一个原创山地无线电维修间 |  
| 前景人物 | 右前 36 岁原创东亚男维修员，暖象牙白亚麻衬衫，手持烧毁真空管 |  
| 背景人物 | 左后 52 岁原创东亚女技师，银黑低发髻，操作一个大旋钮 |  
| Blocking | 右前 / 左后，不交换 |  
| 空间距离线索 | 前景主体约 3.0m；背景人物约 5.7m；窗与远墙约 7.5m |  
| 视角倾向 | Super 35 spherical / fixed 75mm short-telephoto perspective |  
| 构图 | 2.35:1，前景人物头肩占右侧主要面积，背景人物明显更小 |  
| 叙事道具 | 黑色无线电机柜大形、打开的检修舱、中景维修桌、高位纹理玻璃窗 |  
| 光线 | 左上方奶油白窗光 |  
| 色彩 | 暖中性、中间调红琥珀权重、自然暖桃玫瑰肤色、干净暖象牙白衣、深中性橄榄墙、中性黑位 |  
| 干净度 | 道具完好、成组、无污渍与随机堆叠；背景不删空 |

由于当前继续遵守零图像输入，独立 text-to-image 无法锁定同一张脸或像 seed 一样保证像素级一致。Round 09 通过共同文字基底尽量减少漂移，不改用 edit 链。

### 唯一变量：可见焦平面厚度

| 版本 | 语义景深 | 光圈视觉线索 | 背景人物验收 | 背景物件验收 |  
| --- | --- | --- | --- | --- |  
| A | 强浅景深压力测试 | approximately T2.0 | 五官不可分辨；只留头部大形、躯干和手臂方向 | 只留机柜、检修舱、桌和窗的轮廓与色块 |  
| B | 最接近母图目标的中强浅景深 | approximately T2.8 | 头部朝向、发髻、躯干前倾和手臂方向可读；眼鼻嘴边界仍合并 | 大形与故障关系可推断；无小旋钮、文字和材质微纹理 |

| C | 背景叙事增强，但仍不是 deep focus | approximately T4.0 | 头部和面部大平面、躯干、手臂动作可读；无虹膜、睫毛、毛孔、手指分节 | 大检修舱、桌、线圈大形和窗格可读；小控件与木纹仍虚 |

‘T2.0 / T2.8 / T4.0’ 只是帮助模型理解梯度的次级线索，不是原片参数，也不是 GPT Image 2 的物理控件。

## 共同硬性验收

- 正常大小观看，不放大就必须看到前景与后景清晰度差。
- 只允许一个清晰焦平面。
- 不允许 deep focus、all-plane sharpness、focus stacking 或 multiple sharp planes。
- 不允许 smartphone portrait-mode cutout、头发边缘光晕或整层 Gaussian blur。
- 不用雾、灰层、降曝光或删除道具伪装景深。

## Round 09 • Prompt A

文件 : round-09/prompt\_A\_internal.md · SHA-256 :

78134a8a65d3de455b02fb40db4a9efcbb6faa83d3823a888ee8f9cf98ba6bd6

# Prompt A | 内部视觉研究版 | Round 09

用途：强浅景深 stress test。以母图的抽象焦平面规律为研究对象，但生成内容为原创人物、原创无线电维修间和原创叙事。不传入原片或任何旧图。

## 锁定项

- 与 B / C 相同：人物、房间、blocking、机位、75mm 视角倾向、人物距离、光线、色彩、道具大形。
- 唯一变量：强浅景深；次级光圈线索 approximately T2.0。

## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 09 A, independent original cinematic depth-of-field test

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, reference image, previous output, edit, recoloring, image-to-image process, face transfer, or identity transfer. Invent every face, garment, object, and room from scratch. Do not resemble an actor, public figure, existing character, recognizable film frame, or recognizable set.

SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT AND THE HIGHEST VISUAL PRIORITY. THIS MUST NOT BE A DEEP-FOCUS IMAGE.

DEPTH RESULT A — STRONG SHALLOW DEPTH OF FIELD, unmistakable at normal viewing size and at thumbnail size.

Only the foreground man's nearer eye, central facial plane, hands, burned vacuum tube, and front collar edge occupy the narrow plane of critical focus. Resolve these naturally without digital sharpening. His farther ear and rear shoulder already begin to soften.

The rear woman stands about 2.7 meters behind the foreground man and is strongly optically out of focus. Her eyes, nose, and mouth are not separately resolvable. Her hair becomes one soft bun-shaped mass; individual strands, fingers, garment weave, and console controls disappear. Preserve her dramatic role only through her head orientation, torso lean, arm direction, body silhouette, and left-rear blocking.

The radio-console mass, open service-bay void, repair bench, and high window physically remain in the room, but appear only as soft large silhouettes, tonal blocks, positions, and color masses. No small hardware, writing, seams, wood grain, or individual background edges are resolved. The background remains populated, never deleted or replaced by an empty wall.

The loss of sharpness from foreground face to rear woman to far architecture must be immediately obvious without zooming. Use continuous real-lens defocus with progressively broader edges. No deep focus, no all-plane sharpness, no focus stacking, no multiple sharp planes, no evenly resolved room, no smartphone portrait-mode cutout, no hair halo, and no uniform Gaussian blur.

Optical-look cue only, not a verified production setting or physical renderer control: Super 35 spherical, fixed 75mm short-telephoto perspective, approximately T2.0, foreground focus around 3.0 meters, rear woman around 5.7 meters, far wall around 7.5 meters.

#### LOCK EVERYTHING EXCEPT DEPTH OF FIELD.

Create the same original mountain radio maintenance room used across this test bracket. In the right foreground, a newly invented 36-year-old East Asian male repairer holds one burned vacuum tube at lower chest height and quietly inspects it. He has a rectangular face, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and modest neckline.

In the left rear, a newly invented 52-year-old East Asian female technician with a silver-streaked low bun and charcoal utility apron operates one large dial on a compact charcoal-black radio console. Her rear position and arm direction connect her action to the damaged component in the man's hand.

Keep the same spatial arrangement: the man dominates the right foreground; the woman is clearly smaller in the left rear; one dark-teak repair bench bridges them; the broad black console and its open service-bay shape sit behind her; one high ribbed-glass window occupies the rear wall. These large background forms explain the fault, work process, room function, character hierarchy, and depth. They must remain physically present even when optically soft.

Use the same fixed camera position: eye level around 1.35 meters, compressed medium-close framing, the man's head and upper torso filling the right side, the rear woman substantially smaller, no wide-angle expansion. Keep a single uninterrupted line of sight from foreground man through rear woman to the high window.

Lock light and color. Soft cream-white window light enters from the upper left. The frame reads warm-neutral with a clear restrained red-amber midtone bias, never cyan-led or green-led. Give the foreground man's complete face, neck, ears, and hands continuous natural warm peach-rose, muted rose-brown, and restrained terracotta life. Keep clean cream-peach skin highlights and low-chroma warm-neutral-brown skin shadows. The shirt stays luminous clean warm ivory; the window stays creamy white; the wall is deep neutral olive as an object color only; equipment is neutral charcoal-black; wood is dark teak; deep shadows retain a clean neutral black point. Do not change the approved color direction.

Keep surfaces intact, dry, grouped, and regularly maintained. Clean means no random stains, dirt, oxidation, repeated clutter, added grain, haze, or texture overlay; it does not mean removing the narrative background. Natural skin and linen texture may exist only inside the foreground focal plane. No readable text, subtitles, logo, or watermark. Do not render a deep-focus room.

# Prompt B | 描述性原创生成版 | Round 09

用途：中强浅景深目标档。禁止电影名、导演名、演员名和角色真实姓名；只使用原创人物关系、空间、光色和摄影语言。

## 锁定项

- 与 A / C 相同：人物、房间、blocking、机位、75mm 视角倾向、人物距离、光线、色彩、道具大形。
- 唯一变量：最接近当前母图观感目标的中强浅景深；次级光圈线索 approximately T2.8。

## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 09 B, independent original cinematic depth-of-field test

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, reference image, previous output, edit, recoloring, image-to-image process, face transfer, or identity transfer. Invent every face, garment, object, and room from scratch. Do not use or imply any film title, director, actor, named character, public figure, recognizable film frame, or recognizable set.

SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT AND THE HIGHEST VISUAL PRIORITY. THIS MUST NOT BE A DEEP-FOCUS IMAGE.

DEPTH RESULT B — MODERATELY STRONG SHALLOW DEPTH OF FIELD, visibly separated at normal viewing size and at thumbnail size.

Use one optical focal plane on the foreground man's nearer eye, central facial plane, hands, burned vacuum tube, and front collar edge. Resolve these naturally without digital sharpening. His farther ear remains slightly soft and the rear shoulder softens more.

The rear woman stands about 2.7 meters behind the foreground man and is strongly but naturally out of focus. Her separate eyes, nose edges, and mouth edges merge into broad facial masses; there is no iris, eyelash, pore, sharp lip edge, individual hair strand, finger joint, or garment weave. Her bun mass, head orientation, torso lean, arm direction, and hand-to-dial action establish her narrative role.

The radio-console mass, broad open service-bay void, repair bench, and high window remain physically present. Their function can be inferred from large geometry, placement, action, tonal block, and color mass; small controls, writing, hardware, seams, wood grain, and fine material texture remain unresolved. The background carries story without becoming sharp.

Show three obvious focus tiers: critically sharp foreground face and held tube; strongly soft rear woman; still softer console edges, wall, and window divisions. The transition must be visible without zooming and must use continuous real-lens defocus. No deep focus, no all-plane sharpness, no focus stacking, no multiple sharp planes, no evenly resolved room, no smartphone portrait-mode cutout, no hair halo, and no uniform Gaussian blur.

Optical-look cue only, not a verified production setting or physical renderer control: Super 35 spherical, the same fixed 75mm short-telephoto perspective, approximately T2.8, foreground focus around 3.0 meters, rear woman around 5.7 meters, far wall around 7.5 meters.

LOCK EVERYTHING EXCEPT DEPTH OF FIELD.

Create the same original mountain radio maintenance room used across this test bracket. In the right foreground, a newly invented 36-year-old East Asian male repairer holds one burned vacuum tube at lower chest height and quietly inspects it. ### # Prompt C | 安全原创转译版 | Round 09

用途：背景叙事保留档，但仍必须存在可观测景深。全部使用原创人物、原创场景和原创叙事；不使用电影名、导演名、演员名、角色名或可识别原片空间。

### ## 锁定项

- 与 A / B 相同：人物、房间、blocking、机位、75mm 视角倾向、人物距离、光线、色彩、道具大形。
- 唯一变量：叙事保留型景深；后景比 B 多保留大形信息，但严禁回到 deep focus；次级光圈线索 approximately T4.0。

### ## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 09 C, independent original cinematic depth-of-field test

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, reference image, previous output, edit, recoloring, image-to-image process, face transfer, or identity transfer. Invent every face, garment, object, and room from scratch. Do not use or imply any film title, director, actor, named character, public figure, real person's identity, existing fictional character, recognizable film frame, recognizable scene, or recognizable set.

SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT AND THE HIGHEST VISUAL PRIORITY. THIS MUST NOT BE A DEEP-FOCUS IMAGE.

DEPTH RESULT C — NARRATIVE BACKGROUND WITH CONTROLLED OPTICAL SOFTNESS, never deep focus and visibly separated at normal viewing size.

Keep the foreground man's nearer eye, facial plane, hands, burned vacuum tube, and collar naturally sharp without digital sharpening. His farther ear and rear shoulder are slightly softer than the nearer facial plane.

The rear woman stands about 2.7 meters behind the foreground man and remains visibly softer than him. Her head outline, broad face plane, bun mass, head orientation, torso lean, and arm-to-dial action may be inferred, but her iris, eyelashes, pores, individual hair strands, finger joints, garment weave, and separately edged eyes, nostrils, or lips remain unresolved.

The large open service-bay shape, console mass, repair-bench plane, one broad coiled-lead shape, and high window divisions remain physically present and can be inferred from their geometry, placement, tonal block, and color mass. Tiny controls, writing, scratches, cable strands, wood grain, and material microtexture remain optically soft. Background story is stronger than B, but background sharpness must still be visibly lower than the foreground face.

Maintain three visible focus tiers: sharp foreground subject; moderately soft rear character; still softer rear architecture. At normal viewing size, rear facial edges and background microtexture must not compete with the foreground eye. Use continuous real-lens defocus. No deep focus, no all-plane sharpness, no focus stacking, no

multiple sharp planes, no evenly resolved room, no smartphone portrait-mode cutout, no hair halo, and no uniform Gaussian blur.

Optical-look cue only, not a verified production setting or physical renderer control: Super 35 spherical, the same fixed 75mm short-telephoto perspective, approximately T4.0, foreground focus around 3.0 meters, rear woman around 5.7 meters, far wall around 7.5 meters.

#### LOCK EVERYTHING EXCEPT DEPTH OF FIELD.

Create the same original mountain radio maintenance room used across this test bracket. In the right foreground, a newly invented 36-year-old East Asian male repairer holds one burned vacuum tube at lower chest height and quietly inspects it. He has a rectangular face, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and modest neckline.

In the left rear, a newly invented 52-year-old East Asian female technician with a silver-streaked low bun and charcoal utility apron operates one large dial on a compact charcoal-black radio console. Her rear position and arm direction connect her action to the damaged component in the man's hand.

Keep the same spatial arrangement: the man dominates the right foreground; the woman is clearly smaller in the left rear; one dark-teak repair bench bridges them; the broad black console and its open service-bay shape sit behind her; one high ribbed-glass window occupies the rear wall. These large background forms explain the fault, work process, room function, character hierarchy, and depth. They must remain physically present even when optically soft.

Use the same fixed camera position: eye level around 1.35 meters, compressed medium-close framing, the man's head and upper torso filling the right side, the rear woman substantially smaller, no wide-angle expansion. Keep a single uninterrupted line of sight from foreground man through rear woman to the high window.

Lock light and color. Soft cream-white window light enters from the upper left. The frame reads warm-neutral with a clear restrained red-amber midtone bias, never cyan-led or green-led. Give the foreground man's complete face, neck, ears, and hands continuous natural warm peach-rose, muted rose-brown, and restrained terracotta life. Keep clean cream-peach skin highlights and low-chroma warm-neutral-brown skin shadows. The shirt stays luminous clean warm ivory; the window stays creamy white; the wall is deep neutral olive as an object color only; equipment is neutral charcoal-black; wood is dark teak; deep shadows retain a clean neutral black point. Do not change the approved color direction.

Keep surfaces intact, dry, grouped, and regularly maintained. Clean means no random stains, dirt, oxidation, repeated clutter, added grain, haze, or texture overlay; it does not mean removing the narrative background. Natural skin and linen texture may exist only inside the foreground focal plane. No readable text, subtitles, logo, or watermark. Do not render a deep-focus room.

*Round 09 · C | JW-LTBF-02\_C\_r09.png*

Round 10

**Janet**：暗部少量提高青色；中间调少量提高洋红；B/C 再提高。

|        |                                               |
|--------|-----------------------------------------------|
| 唯一主动变量 | 锁定景深，只改 cyan shadow + magenta-red midtone 分区。 |
| 阶段结果   | Janet 判定完美 / ABC 比较完美；当前为冻结候选。                |
| 生成边界   | 零图像输入、独立 text-to-image；不使用旧图做 edit target。    |

原始 feedback.md

Round 09 判定

- A 的色调相对更好，但画面仍然缺少红色权重。
- 下一轮在暗部增加少量 cyan。
- 中间调增加少量 magenta，同时让人物面部的红色系更明确。
- B / C 的修正强度要比 A 再提高，建立 `A < B < C` 梯度。

本轮修改边界

- 只改变色彩分布。
- 锁定 Round 09 的原创人物、无线电维修间、blocking、机位、焦段倾向、光线方向、曝光、道具大形和 A / B / C 各自的景深档位。
- 不对 Round 09 图像做 edit 或 recolor；仍然是三次独立零图像输入 text-to-image。
- 当轮同步完成 Prompt 和三张图像。

色彩理解

- `cyan in shadows` 只用在最深的设备暗部、墙角、桌下和闭塞阴影，形成干净 cyan-charcoal；不得变成 green、teal 或 gray-green 环境光。

- `magenta in midtones` 是低饱和 muted magenta-red / rose-brown，主要进入人物面部、颈部、耳部、手部和少量木质反光；白衣中间调保持现有暖米色，不接收可见 magenta 或 cyan。
- 高光保持 clean cream-white，不加 cyan 或 magenta。

## color-gradient.md

以下是提示词内部的感知强度，不是 Resolve 或现场摄影参数。

|                                                                    |
|--------------------------------------------------------------------|
| 版本   继承景深   暗部 cyan   中间调 magenta-red   面部红色   主要目的                |
| ---   ---   ---   ---   ---   ---                                  |
| A   Round 09 A / T2.0 强浅景深   轻微   轻微   在 A 已较好的基础上补足   建立最小有效修正    |
| B   Round 09 B / T2.8 目标景深   低至中低   中低   明显高于 A，但仍自然   建立目标中心值     |
| C   Round 09 C / T4.0 叙事景深   中低   中等   比 B 再提高一档   验证上限，不进入粉红或紫红洗版 |

## 共同分区

### 最深暗部

- 设备黑位、墙角、桌下、发丝间隙和闭塞阴影加入 clean cyan-charcoal。
- 人脸主要阴影保持 warm-neutral brown，只在最暗的边缘闭塞处允许一丝 cyan。
- 禁止扩散成全画面 teal / green 光。

### 中间调

- 人物额头、太阳穴、面颊、鼻部、下颌、颈部、耳部和手部使用连续 muted magenta-red、rose-brown 与自然红棕。
- 暖象牙白衣保留现有的中性暖米色折痕，不新增可见 magenta、pink、cyan 或 green 污染。
- 深柚木桌面保留少量红棕反射，帮助红色不只孤立在脸上。

### 高光

- 窗光、白衣主高光、眼白与皮肤高光保持 clean cream-white / cream-peach。
- 禁止 cyan highlights、magenta highlights、pink shirt、purple skin 或 global color wash。

## Round 10 • Prompt A

文件 : *round-10/prompt\_A\_internal.md* · SHA-256 :

*c791aef28ce8d2476fe493f5289a55d82cc003d7a49cc3729f33b6bdacc69e6a*

# Prompt A | 内部视觉研究版 | Round 10

用途：在完整锁定 Round 09 A 强浅景深的前提下，建立最小有效色彩修正：最深暗部少量 clean cyan，中间调少量 muted magenta-red。不传入原片、Round 09 图片或任何旧图。

## 锁定项

- 锁定 Round 09 A：人物、房间、blocking、机位、75mm 视角倾向、人物距离、光线方向、曝光、道具大形与 T2.0 强浅景深语义。
- 本轮唯一变量：轻微 cyan shadow + 轻微 magenta-red midtone。

## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 10 A, independent original cinematic color-split test

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, reference image, previous output, edit, recoloring, image-to-image process, face transfer, or identity transfer. Invent every face, garment, object, and room from scratch. Do not resemble an actor, public figure, existing character, recognizable film frame, or recognizable set.

SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT AND THE HIGHEST VISUAL PRIORITY. THIS MUST NOT BE A DEEP-FOCUS IMAGE.

DEPTH RESULT A — STRONG SHALLOW DEPTH OF FIELD, unmistakable at normal viewing size and at thumbnail size.

Only the foreground man's nearer eye, central facial plane, hands, burned vacuum tube, and front collar edge occupy the narrow plane of critical focus. Resolve these naturally without digital sharpening. His farther ear and rear shoulder already begin to soften.

The rear woman stands about 2.7 meters behind the foreground man and is strongly optically out of focus. Her eyes, nose, and mouth are not separately resolvable. Her hair becomes one soft bun-shaped mass; individual strands, fingers, garment weave, and console controls disappear. Preserve her dramatic role only through her head orientation, torso lean, arm direction, body silhouette, and left-rear blocking.

The radio-console mass, open service-bay void, repair bench, and high window physically remain in the room, but appear only as soft large silhouettes, tonal blocks, positions, and color masses. No small hardware, writing, seams, wood grain, or individual background edges are resolved. The background remains populated, never deleted or replaced by an empty wall.

The loss of sharpness from foreground face to rear woman to far architecture must be immediately obvious without zooming. Use continuous real-lens defocus with progressively broader edges. No deep focus, no all-plane sharpness, no focus stacking, no multiple sharp planes, no evenly resolved room, no smartphone portrait-mode cutout, no hair halo, and no uniform Gaussian blur.

Optical-look cue only, not a verified production setting or physical renderer control: Super 35 spherical, fixed 75mm short-telephoto perspective, approximately T2.0, foreground focus around 3.0 meters, rear woman around 5.7 meters, far wall around 7.5 meters.

PRESERVE DEPTH RESULT A EXACTLY. LOCK GEOMETRY, BLOCKING, CAMERA, LIGHT DIRECTION, EXPOSURE, MATERIALS, AND DEPTH OF FIELD. THE ONLY NEW ROUND-10 VARIABLE IS THE COLOR DISTRIBUTION DEFINED BELOW.

Create the same original mountain radio maintenance room used across this test bracket. In the right foreground, a newly invented 36-year-old East Asian male repairer holds one burned vacuum tube at lower chest height and quietly inspects it. He has a rectangular face, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and modest neckline.

In the left rear, a newly invented 52-year-old East Asian female technician with a silver-streaked low bun and charcoal utility apron operates one large dial on a compact charcoal-black radio console. Her rear position and arm direction connect her action to the damaged component in the man's hand.

Keep the same spatial arrangement: the man dominates the right foreground; the woman is clearly smaller in the left rear; one dark-teak repair bench bridges them; the broad black console and its open service-bay shape sit behind her; one high ribbed-glass window occupies the rear wall. These large background forms explain the fault, work process, room function, character hierarchy, and depth. They must remain physically present even when optically soft.

Use the same fixed camera position: eye level around 1.35 meters, compressed medium-close framing, the man's head and upper torso filling the right side, the rear woman substantially smaller, no wide-angle expansion. Keep a single uninterrupted line of sight from foreground man through rear woman to the high window.

Lock the upper-left cream-white light direction and exposure, then apply COLOR RESULT A: a subtle correction. Put a small clean cyan-blue bias only into the deepest equipment blacks, tobacco-umber wall recesses, under-table occlusion, hair gaps, and the final edge of cast shadows. Keep the absolute black point nearly neutral. These shadow areas read as low-chroma cyan-charcoal, never teal, green, gray-green, or blue-lit. Protect all skin and the warm-ivory shirt from cyan contamination; keep the main facial shadows warm-neutral brown with only a trace of cyan at their deepest occlusion edge. Increase muted magenta-red and rose-brown slightly across the complete facial midtones: forehead, temples, cheeks, nose, jaw, neck, ears, and hands. The red presence must be continuous and visible but natural, not isolated blush. Preserve the shirt's existing restrained warm-beige half-shadow folds without visible magenta, pink, cyan, or green, and add only a restrained red-brown reinforcement to the dark-teak wood. Keep window light, shirt highlights, eye whites, and skin highlights clean cream-white or cream-peach. Warm red-bearing midtones must carry more perceptual weight than the cool shadow accent, so the complete frame still reads warm. No pink filter, purple skin, red wash, cyan highlights, global teal-magenta grade, orange cast, or saturation boost.

Keep surfaces intact, dry, grouped, and regularly maintained. Clean means no random stains, dirt, oxidation, repeated clutter, added grain, haze, or texture overlay; it does not mean removing the narrative background. Natural skin and linen texture may exist only inside the foreground focal plane. No readable text, subtitles, logo, or watermark. Do not render a deep-focus room.

## Round 10 • Prompt B

文件 : round-10/prompt\_B\_descriptive.md · SHA-256 :

ff23edb5bd026a01e4b495ed6e6daba9827e821742dd32a7e0c60fa0629ba436

# Prompt B | 描述性原创生成版 | Round 10

用途：在完整锁定 Round 09 B 目标景深的前提下，将 cyan shadow 与 magenta-red midtone 比 A 提高一档。禁止电影名、导演名、演员名和角色真实姓名。

## 锁定项

- 锁定 Round 09 B：人物、房间、blocking、机位、75mm 视角倾向、人物距离、光线方向、曝光、道具大形与 T2.8 目标景深语义。
- 本轮唯一变量：比 A 更明确的低至中低 cyan shadow + 中低 magenta-red midtone。

## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 10 B, independent original cinematic color-split test

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, reference image, previous output, edit, recoloring, image-to-image process, face transfer, or identity transfer. Invent every face, garment, object, and room from scratch. Do not use or imply any film title, director, actor, named character, public figure, recognizable film frame, or recognizable set.

SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT AND THE HIGHEST VISUAL PRIORITY. THIS MUST NOT BE A DEEP-FOCUS IMAGE.

DEPTH RESULT B — MODERATELY STRONG SHALLOW DEPTH OF FIELD, visibly separated at normal viewing size and at thumbnail size.

Use one optical focal plane on the foreground man's nearer eye, central facial plane, hands, burned vacuum tube, and front collar edge. Resolve these naturally without digital sharpening. His farther ear remains slightly soft and the rear shoulder softens more.

The rear woman stands about 2.7 meters behind the foreground man and is strongly but naturally out of focus. Her separate eyes, nose edges, and mouth edges merge into broad facial masses; there is no iris, eyelash, pore, sharp lip edge, individual hair strand, finger joint, or garment weave. Her bun mass, head orientation, torso lean, arm direction, and hand-to-dial action establish her narrative role.

The radio-console mass, broad open service-bay void, repair bench, and high window remain physically present. Their function can be inferred from large geometry, placement, action, tonal block, and color mass; small controls, writing, hardware, seams, wood grain, and fine material texture remain unresolved. The background carries story without becoming sharp.

Show three obvious focus tiers: critically sharp foreground face and held tube; strongly soft rear woman; still softer console edges, wall, and window divisions. The transition must be visible without zooming and must use continuous real-lens defocus. No deep focus, no all-plane sharpness, no focus stacking, no multiple sharp planes, no evenly resolved room, no smartphone portrait-mode cutout, no hair halo, and no uniform Gaussian blur.

Optical-look cue only, not a verified production setting or physical renderer control: Super 35 spherical, the same fixed 75mm short-telephoto perspective, approximately T2.8, foreground focus around 3.0 meters, rear woman around 5.7 meters, far wall around 7.5 meters.

PRESERVE DEPTH RESULT B EXACTLY. LOCK GEOMETRY, BLOCKING, CAMERA, LIGHT DIRECTION, EXPOSURE, MATERIALS, AND DEPTH OF FIELD. THE ONLY NEW ROUND-10 VARIABLE IS THE COLOR DISTRIBUTION DEFINED BELOW.

Create the same original mountain radio maintenance room used across this test bracket. In the right foreground, a newly invented 36-year-old East Asian male repairer holds one burned vacuum tube at lower chest height and quietly inspects it. He has a rectangular face, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and modest neckline.

In the left rear, a newly invented 52-year-old East Asian female technician with a silver-streaked low bun and charcoal utility apron operates one large dial on a compact charcoal-black radio console. Her rear position and arm direction connect her action to the damaged component in the man's hand.

Keep the same spatial arrangement: the man dominates the right foreground; the woman is clearly smaller in the left rear; one dark-teak repair bench bridges them; the broad black console and its open service-bay shape sit behind her; one high ribbed-glass window occupies the rear wall. These large background forms explain the fault, work process, room function, character hierarchy, and depth. They must remain physically present even when optically soft.

Use the same fixed camera position: eye level around 1.35 meters, compressed medium-close framing, the man's head and upper torso filling the right side, the rear woman substantially smaller, no wide-angle expansion. Keep a single uninterrupted line of sight from foreground man through rear woman to the high window.

Lock the upper-left cream-white light direction and exposure, then apply COLOR RESULT B: one clear but controlled tier above A. Put a modest low-saturation cyan-blue bias into the deepest equipment blacks, tobacco-umber wall recesses, under-table occlusion, hair gaps, and the final edge of cast shadows. Keep the absolute black point nearly neutral. The cyan-charcoal separation must be visible without turning the room teal, green, gray-green, or blue-lit. Protect all skin and the warm-ivory shirt from cyan contamination; keep the main facial shadows warm-neutral brown and allow only a restrained cyan trace at their deepest occlusion edge. Raise muted magenta-red, rose-brown, and natural red-brown across all facial midtones more clearly than A: forehead, temples, cheeks, nose, jaw, neck, ears, and hands. The face-wide red presence must remain visible at thumbnail size without becoming blush, pink, purple, or orange. Preserve the shirt's existing restrained warm-beige half-shadow folds without visible magenta, pink, cyan, or green, and give the dark-teak wood a slightly stronger red-brown reinforcement than A. Keep window light, shirt highlights, eye whites, and skin highlights clean cream-white or cream-peach. Warm red-bearing midtones must carry more perceptual weight than the cool shadow accent, so the complete frame still reads warm. No pink filter, purple skin, red wash, cyan highlights, global teal-magenta grade, orange cast, or global saturation boost.

Keep surfaces intact, dry, grouped, and regularly maintained. Clean means no random stains, dirt, oxidation, repeated clutter, added grain, haze, or texture overlay; it does not mean removing the narrative background. Natural skin and linen texture may exist only inside the foreground focal plane. No readable text, subtitles, logo, or watermark. Do not render a deep-focus room.

### # Prompt C | 安全原创转译版 | Round 10

用途：在完整锁定 Round 09 C 叙事保留景深的前提下，将 cyan shadow 与 magenta-red midtone 比 B 再提高一档，用于观察可接受上限。全部人物、场景与叙事仍为原创。

### ## 锁定项

- 锁定 Round 09 C：人物、房间、blocking、机位、75mm 视角倾向、人物距离、光线方向、曝光、道具大形与 T4.0 叙事保留景深语义。
- 本轮唯一变量：比 B 再提高一档的中低 cyan shadow + 中等 magenta-red midtone。

### ## Prompt

Use case: photorealistic-natural

Asset type: JW-LTBF-02 Round 10 C, independent original cinematic color-split test

Generate a brand-new 2.35:1 photorealistic cinematic still solely from this written specification. Use zero image input: no source frame, reference image, previous output, edit, recoloring, image-to-image process, face transfer, or identity transfer. Invent every face, garment, object, and room from scratch. Do not use or imply any film title, director, actor, named character, public figure, real person's identity, existing fictional character, recognizable film frame, recognizable scene, or recognizable set.

SELECTIVE FOCUS IS THE DOMINANT REQUIREMENT AND THE HIGHEST VISUAL PRIORITY. THIS MUST NOT BE A DEEP-FOCUS IMAGE.

DEPTH RESULT C — NARRATIVE BACKGROUND WITH CONTROLLED OPTICAL SOFTNESS, never deep focus and visibly separated at normal viewing size.

Keep the foreground man's nearer eye, facial plane, hands, burned vacuum tube, and collar naturally sharp without digital sharpening. His farther ear and rear shoulder are slightly softer than the nearer facial plane.

The rear woman stands about 2.7 meters behind the foreground man and remains visibly softer than him. Her head outline, broad face plane, bun mass, head orientation, torso lean, and arm-to-dial action may be inferred, but her iris, eyelashes, pores, individual hair strands, finger joints, garment weave, and separately edged eyes, nostrils, or lips remain unresolved.

The large open service-bay shape, console mass, repair-bench plane, one broad coiled-lead shape, and high window divisions remain physically present and can be inferred from their geometry, placement, tonal block, and color mass. Tiny controls, writing, scratches, cable strands, wood grain, and material microtexture remain optically soft. Background story is stronger than B, but background sharpness must still be visibly lower than the foreground face.

Maintain three visible focus tiers: sharp foreground subject; moderately soft rear character; still softer rear architecture. At normal viewing size, rear facial edges and background microtexture must not compete with the foreground eye. Use continuous real-lens defocus. No deep focus, no all-plane sharpness, no focus stacking, no

multiple sharp planes, no evenly resolved room, no smartphone portrait-mode cutout, no hair halo, and no uniform Gaussian blur.

Optical-look cue only, not a verified production setting or physical renderer control: Super 35 spherical, the same fixed 75mm short-telephoto perspective, approximately T4.0, foreground focus around 3.0 meters, rear woman around 5.7 meters, far wall around 7.5 meters.

PRESERVE DEPTH RESULT C EXACTLY. LOCK GEOMETRY, BLOCKING, CAMERA, LIGHT DIRECTION, EXPOSURE, MATERIALS, AND DEPTH OF FIELD. THE ONLY NEW ROUND-10 VARIABLE IS THE COLOR DISTRIBUTION DEFINED BELOW.

Create the same original mountain radio maintenance room used across this test bracket. In the right foreground, a newly invented 36-year-old East Asian male repairer holds one burned vacuum tube at lower chest height and quietly inspects it. He has a rectangular face, short clean side-parted hair, no facial hair, and no eyewear. He wears a clean, repeatedly laundered loose warm-ivory linen field shirt with a soft band collar and modest neckline.

In the left rear, a newly invented 52-year-old East Asian female technician with a silver-streaked low bun and charcoal utility apron operates one large dial on a compact charcoal-black radio console. Her rear position and arm direction connect her action to the damaged component in the man's hand.

Keep the same spatial arrangement: the man dominates the right foreground; the woman is clearly smaller in the left rear; one dark-teak repair bench bridges them; the broad black console and its open service-bay shape sit behind her; one high ribbed-glass window occupies the rear wall. These large background forms explain the fault, work process, room function, character hierarchy, and depth. They must remain physically present even when optically soft.

Use the same fixed camera position: eye level around 1.35 meters, compressed medium-close framing, the man's head and upper torso filling the right side, the rear woman substantially smaller, no wide-angle expansion. Keep a single uninterrupted line of sight from foreground man through rear woman to the high window.

Lock the upper-left cream-white light direction and exposure, then apply COLOR RESULT C: one controlled tier above B, serving as the upper test boundary. Put a clearly present but still low-saturation cyan-blue bias into the deepest equipment blacks, tobacco-umber wall recesses, under-table occlusion, hair gaps, and the final edge of cast shadows. Keep the absolute black point nearly neutral. Preserve a clean cyan-charcoal split without turning the room teal, green, gray-green, or blue-lit. Protect all skin and the warm-ivory shirt from cyan contamination; keep the main facial shadows warm-neutral brown and allow cyan only in the deepest occlusion edge. Raise muted magenta-red, rose-brown, and natural red-brown across the complete facial midtones more than B: forehead, temples, cheeks, nose, jaw, neck, ears, and hands. The red presence must be face-wide, coherent, and unmistakable at thumbnail size, while remaining human skin rather than pink, purple, red-painted, or orange. Preserve the shirt's existing restrained warm-beige half-shadow folds without visible magenta, pink, cyan, or green, and give the dark-teak wood a controlled red-mahogany reinforcement, distributing red through the frame instead of isolating it on the face. Keep window light, shirt highlights, eye whites, and skin highlights clean cream-white or cream-peach. Warm red-bearing midtones must carry more perceptual weight than the cool shadow accent, so the complete frame still reads warm. No pink filter, purple skin, red wash, cyan highlights, global teal-magenta grade, orange cast, or global saturation boost.

Keep surfaces intact, dry, grouped, and regularly maintained. Clean means no random stains, dirt, oxidation, repeated clutter, added grain, haze, or texture overlay; it does not mean removing the narrative background. Natural skin and linen texture may exist only inside the foreground focal plane. No readable text, subtitles, logo, or watermark. Do not render a deep-focus room.

*Round 10 · C | JW-LTBF-02\_C\_r10.png*

## 5. 可见会话文字归档

以下内容来自当前 Codex 任务中可检索的 Janet/Codex 可见文字消息。Prompt 与图片已在各轮完整收录；工具 payload 与图像 base64 不属于聊天正文。

### JW-LTBF-02 | 可见会话文字归档

范围：从本测试任务启动至 Janet 对 Round 10 给出“完美 / ABC 版本比较完美”的阶段评价。

本文件保存任务记录中可检索的 Janet 与 Codex 可见文字消息；图像生成器的内部 payload、推理过程和工具日志不属于聊天正文。三十份完整 Prompt 与三十张 canonical 图片保存在各轮目录，并在首要 DOCX 中依轮次全文收录。

任务导出的消息记录未提供可采信的真实时间戳，因此只保留消息 ID 与会话顺序，不伪造日期。

### 会话记录 01 | 019f5b30-6af1-7ba0-84cd-3252e6421bbb

#### Janet

继续镜场计划视觉研发阶段。

JW-LTBF-01 / S0-01 已完成冻结。

现在正式启动：

JW-LTBF-02 / S0-02

测试母图：

frames/让子弹飞/04\_master\_testset\_14/02\_huang\_white\_interior\_closeup.jpg

执行方式完全复制第一组测试流程：

原片分析

→ 第一组 A/B/C Prompt

→ 生成测试图

→ Janet 肉眼评价

→ 根据反馈修改 Prompt

→ 第二组 A/B/C Prompt

→ 再测试

→ 循环直到阶段收尾。

不要一次追求最终答案。

---

第一阶段：建立测试基础

请先完成：

tests/JW-LTBF-02/

source-record.md

内容：

- 原片来源
- 对应 5 秒片段
- 原片时间码（无法确认标待核）
- 角色信息（待原片确认）
- 剧情阶段
- 人物关系
- 台词前后
- 镜头叙事作用

analysis-notes.md

必须按照 JW-LTBF-01 标准：

一、空间

- 前景
- 主体
- 中景
- 背景
- 室内空间关系
- 墙体/窗户/家具/装饰
- 人物位置

- 摄影机高度
- 景别
- 焦段倾向

## 二、人物

- 身份层级
- 当下情绪
- 表情状态
- 身体姿态
- 与画外信息关系

## 三、摄影

- 构图
- 光线方向
- 光比
- 景深
- 空间压缩

## 四、调色

只能写：

“根据画面结果推测”

不能伪造真实 Resolve 参数。

分析：

- Exposure
- Lift
- Gamma
- Gain
- Contrast
- Pivot
- WB

- Tint
  - 暗部
  - 中间调
  - 高光
  - 肤色区域
  - 白衣区域
  - 背景区域
  - 材质表现
  - 颗粒
  - 柔化
- 

第二阶段：第一轮 Prompt 测试

生成：

prompt\_A\_internal.md

内部原片研究版。

允许：

- 原片信息
- 角色身份
- 剧情语境

用于研究。

prompt\_B\_descriptive.md

描述性复刻版。

禁止：

- 电影名
- 导演名
- 演员名
- 角色真实姓名

只保留：

- 人物关系
- 空间
- 服装
- 光线
- 调色结果
- 摄影语言

prompt\_C\_safe.md

安全转译版。

改造成：

原创人物

原创场景

原创叙事

保留：

视觉规律。

---

第三阶段：生成循环

第一轮：

A/B/C 各生成测试图。

目标：

不是最终通过。

目标：

观察：

37. 人物身份是否正确

38. 空间是否正确

39. 白衣是否正确

40. 室内光是否正确

41. 色彩是否正确

42. 是否出现 AI 味

生成后停止。

等待 Janet 肉眼评价。

---

后续循环规则：

Janet 提供：

- 原图
- A/B/C 结果
- 肉眼反馈

根据反馈：

只修改有问题变量。

例如：

色彩问题：

→ 修改调色语言

人物问题：

→ 修改角色状态

空间问题：

→ 修改镜头和环境

AI 味：

→ 修改材质、人脸、摄影描述

不要每次完全推翻。

直到：

JW-LTBF-02 达到冻结标准。

---

禁止：

- 不进入网站开发
- 不接 API
- 不修改工程架构
- 不修改 JW-LTBF-01
- 不提前生成最终作品

当前目标：

完成第二张电影母图的视觉复刻实验闭环。

### Codex

我会严格沿用 JW-LTBF-01 的测试闭环：先读取 Janet 本地档案与既有 01 组标准，再建立 02 组记录、分析和首轮 A/B/C Prompt，最后各生成一张测试图并停下。因为本轮包含 AI 图片生成，我会按 `xyq-nest-skill` 执行；同时读取 `imagegen` 规范，确认本地参考图的编辑/参考方式。不会改 01、工程架构或进入网站/API。

### Codex

档案已读取。接下来先对齐 01 组的真实文件格式和命名，不凭空重建标准；原片的角色/时间码只写可证据确认的内容，不能确认就标“待核”。`xyq-nest-skill` 要求参考图先上传、产物自动下载；首轮会把三份已定稿 Prompt 分别原样提交，不在提交时二次扩写。

### Codex

当前指定工作区只有空的 `.git`，没有任何已检出的项目文件；这与“01 已冻结、02 母图已存在”不一致。我正在全盘定位同名母图和 `JW-LTBF-01`，先找回真实项目位置，不会在空仓里凭空造一套。

### Codex

已确认真实项目在 `/Volumes/Janet/janet-public-site/镜场计划`；当前工作目录是同名空仓，不能承载这轮实验。我只会在真实项目的 `tests/JW-LTBF-02/` 内更新本轮文件。01 组没有可复制的外部图片命名，我会沿用其流程和冻结标准，并为 02 新建 `round-01/` 作为首轮归档。小云雀环境缺少

`XYQ\_ACCESS\_KEY`，因此首轮三图改用已可用的内置图像生成能力；这不会接 API、改代码或改架构。

## Codex

基础文件已完成并通过字段检查：时间码已逐帧确认到 `00:20:00.000`，来源为国语版；角色姓名和完整关系仍按要求标“待原片确认”。现在按 A → B → C 分别生成首轮测试图，三张都会引用同一权威母图、使用各自文件里的 Prompt，保存后立即停下。

## Codex

A 版仍在生成中；这是首轮基线，不做中途纠偏。完成后会直接继续 B、C。

## Codex

## 会话记录 02 | 019f5b56-a299-7a32-a9d1-f90842de2979

### Janet

下次先把 ABC 版本的提示词全部写出来，然后直接生成 ABC 版本的图片分开 一轮看三个

## Codex

明白。后续每轮固定顺序：

先完整写出 A/B/C 三版 Prompt → 再分别生成 A、B、C 三张图 → 一轮同时给你看三张 → 等你肉眼评价后再改下一轮。

不再一张一张穿插汇报。

## 会话记录 03 | 019f5b57-06a3-7c70-9f84-7722c78624a8

### Janet

重置第一轮现在就开始

## Codex

现在重置第一轮：先把现有首轮完整归档，不覆盖丢失；再一次性完成新版 A/B/C Prompt，确认三份都写完后，分别生成三张图，最后同一轮一起交给你看。图片生成会按 `xyq-nest-skill` 检查小云雀环境，并按 `imagegen` 规范走可用生成路径。

## Codex

小云雀仍缺少 `XYQ\_ACCESS\_KEY`，所以这轮继续用内置图像生成，不接外部 API。现有首轮会整体移入 `archive/`；新首轮从三份 Prompt 重新编号，三份全部核验完成后才一起启动三张图。

## Codex

新版 A/B/C Prompt 已全部写完并锁定，生成前审核通过。现在三版分别调用、并行出图；不会中途展示单张，三张全部完成后按 A、B、C 顺序一次给你看。

## Codex

三张仍在同批生成中，尚未展示任何单张；完成后会一次出现 A/B/C。

## Codex

当前仍是同一批并行任务，没有失败提示；我继续等三张全部返回。

## Codex

三图生成比上一批慢，但任务仍在运行；不拆开、不提前交付。

## Codex

## 会话记录 04 | 019f5f8b-c741-7a53-958a-56aa646f3333

### Janet

颜色太清了，原图角色还发点红，暖色一点点，但背景的颜色基本够了

## Codex

收到。第二轮只动一个变量：人物肤色与人物中间调轻微加暖、加一点自然红润，压掉“过清、过干净”的数码感；背景的深绿黑、窗框和空间颜色全部锁住不改。先写完 A/B/C 第二轮 Prompt，再同批生成三张。

## Codex

第二轮改法已经锁死：不做全局暖调，不碰背景 WB/Tint/Exposure/Contrast，也不改白衣、构图、人物、景深。只在人物脸、耳、鼻、颈、手的 skin midtones 里加一小步低饱和暖桃红，让人物不再那么“干净发白”。其中 B 的幅度略大，A/C 更克制。

## Codex

收到。这轮只修人物肤色：增加一点克制的暖红，背景、白衣、构图、光线与质感全部锁定。A/B/C 提示词已经分别写完，我现在按三张一轮同时生成，不提前单独放图。

## Codex

第二轮三版参数已锁定：A 轻微暖红，B 修正幅度稍大，C 补玫瑰暖棕并压住黄橙；不是统一套暖色滤镜。现在三张同时开跑，完成后一次并排交给你看。

## Codex

三张都在生成中，当前没有先完成就先展示；我会等 A/B/C 全部落盘并校验后一起出现。非肤色区域仍按锁定条件保留。

## Codex

仍在并行渲染，三个任务都没有报错。完成后我会先确认文件尺寸与哈希，再按 A、B、C 顺序一次给你看这一轮。

## Codex

生成还在继续，属于正常耗时。第二轮 Prompt 已经分别保存，不会因等待而混成同一版；交付时仍是三个独立文件。

## Codex

还在跑，没有提前改单或重试。重点约束保持不变：只让人物肤色略暖、略发红，背景不跟着升温。

## Codex

## 会话记录 05 | 019f6351-0750-7d20-b3e6-f165b14b9277

### Janet

继续创建新一轮提示词，这一轮告知你，颜色依旧偏青，对比原图角色面部没有红色系，应该增加红色在画面中的权重，尤其是面部的，abc 中都要添加，现在写新的 abc 三个提示词，然后给我新的三张图

## Codex

收到，进入 Round 03。这轮 A/B/C 都提高红色权重，重点补面部红色系并压低偏青感；构图、人物、白衣、背景结构和光线不动。我会先完整写好三个新 Prompt，再把三张同时生成、一次给你看。

我会按 `xyq-nest-skill` 的创作流程组织这一轮，并用 `imagegen` 分别编辑 A/B/C，因为这次是基于上一轮结果的三张定向图像迭代。

### Codex

`XYQ\_ACCESS\_KEY` 当前未配置，所以这轮改用内置 `imagegen`，不接外部 API。流程不变：先写全 A/B/C，再三张同批生成。

### Codex

对比已经定下来：上一轮 Prompt 里的 `very slightly / restrained / just enough` 把红色压没了。Round 03 会删掉这些弱化词；A 中等明确，B 三版最强，C 去青绿同时压黄橙，再补红棕。所有红色只进人物皮肤，不污染白衣和背景。

### Codex

新的 A/B/C 已全部写完并校验：A 面部红色约 +25%，B 约 +35–40%，C 约 +30% 且压住黄橙。现在三张基于各自 Round 02 结果同时生成，全部完成后按 A、B、C 一轮给你。

### Codex

三张都在生成中，目前没有报错，也不会先完成一张就先放一张。A/B/C 会等全部落盘后一起出现。

### Codex

仍在并行渲染。核心约束没有变化：红色要进入整块面部中间调，不是只加腮红；白衣、窗光和绿黑背景保持原样。

### Codex

## 会话记录 06 | 019f637d-eb93-7570-a109-c6085fe04235

### Janet

我明白了，你的第一张完全就是原版图片改了个色，我不要那个，我以为你的第一张是原图呢，原来是 a 图，我说为什么一直都比后面的红，不要原图转色啊，要不同参数，别用原图就改个颜色糊弄我，角色不能用原来的，不然就侵权了懂吗，现在 b 图的颜色最接近，但是还有点偏红，稍微降低，要发一点青色

## Codex

懂，是我执行错了：A 一直沿用“原图 → 改色”的 edit 链，所以角色和构图被原片锁死，这版不合格，不能算原创测试。

现在直接重置 Round 04：

- A/B/C 全部改成 text-to-image 原创建图。
- 不再把原片、旧 A、旧 B、旧 C 作为任何图像输入。
- 三版都换成原创人物，避开原角色的脸、发型、胡须、圆墨镜和标志性姿态。
- 色彩以 B 为文字基准：红色略降，皮肤中间调加入一点青色平衡。
- 仍然先写全三个 Prompt，再同批生成三张。

这轮继续按 `xyq-nest-skill` 组织创作，并用 `imagegen` 做三张独立的新图。

## Codex

根因已经锁死：不是单纯“颜色没调对”，而是旧图 edit 链把身份和构图一层层继承了。Round 04 三版全部断链，实际调用只传文字 Prompt，不传任何图片；A/B/C 的人物、场景、手势、窗型、焦段和青红比例都会分别重做。

## Codex

三个新 Prompt 已全部写完。实际生成现在严格是三次独立 `{prompt}` 调用：没有 `referenced\_image\_paths`，没有带入最近图片，也不会让 A/B/C 相互当参考。先后台生成并做原创性检查，确认无旧角色痕迹后再把最终三张一起放出来。

## Codex

三张正在独立生成，当前无报错。因为这轮要先排除“旧角色换色”的问题，生成完我会先检查人物脸、胡须、眼镜、手势和空间是否真正断链，再统一展示。

## Codex

仍在并行渲染。A 是种子档案室，B 是无线电维修间，C 是纺织修复室；三版人物年龄、性别组合、焦段、blocking 和青红比例都不同，不是同一张换色。

## Codex

还在正常生成，没有带入任何母图或旧图。色彩中心是 B：去掉上一轮明显红脸，只在皮肤中间调保留极轻 cyan-olive，白衣和背景不染青。

## Codex

三张已生成并落盘，正在做最后的断链检查，暂时不展示半成品。只要发现任何一张仍像旧角色或复用了旧图指纹，我会直接废弃那张并从纯文字重生。

## Codex

断链 QA 通过：三张都没有旧角色、圆有色镜、胡须、扶腰或旧空间指纹。下面按 A、B、C 顺序展示；B 是中心色，A 偏暖端，C 偏青端。

## Codex

JW\_002\_goose\_town\_2000\_b.jpg: /Volumes/Janet/janet-public-site/镜场计划/frames/让子弹飞/02\_candidate\_frames\_ab/JW\_002\_goose\_town\_2000\_b.jpg

### My request for Codex:

色彩太青了，你可以参考这两张图，从不同角度去分析色彩，你的色彩太青了

## Codex

对，上一轮把 `cyan-olive` 直接写进了皮肤中间调，而且 A/B/C 设到 2-7%，方向过头了。

这两张不同角度给出的共同结论很明确：

- 青绿主要在室内暗部，不在人物皮肤中间调。
- 人脸主体是暖米桃、淡琥珀和低饱和红棕。
- 换到侧脸角度后，皮肤仍然偏暖，说明不是单一角度的偶然反光。
- 白衣和窗光是奶油中性暖，不是青白。

我现在做 Round 05：先分别分析两张参考图的皮肤、白衣、窗光、背景色域，再把它们整理成不含人物身份的纯色彩依据。生成仍是原创 text-to-image，不把原片人物交给模型。然后写全 A/B/C，再同批出三张。

这轮继续用 `xyq-nest-skill` 组织流程，并用 `imagegen` 完成三张原创生成。

### Codex

双角度分析已经收敛：Round 05 不再用“青色多少”做三档，而是把皮肤青色全部归零，用低饱和红棕强度夹目标。A 约 4–5%，B 约 7–8%，C 约 10–11%；绿色只留在背景，白衣和窗光重新做暖锚点。

### Codex

新的 A/B/C 已写完：不再把“青”当皮肤变量，三版只测试红棕强度。实际生成仍只传 Prompt，两张原片不会进入模型；现在同批生成，完成后先检查是否还青，再一次给你看三张。

### Codex

三张都在独立生成，当前无报错。重点检查项已经从“加多少青”改成“皮肤是否真正和绿黑背景分色”：脸要有 peach / rose，阴影要是 warm brown，白衣和窗光要保持奶油暖。

### Codex

仍在并行渲染，没有带入两张原片或任何旧结果。A/B/C 的人物与空间继续原创，只有色彩段发生变化。

### Codex

三张已经生成并落盘，正在做双角度参考对照 QA。先不放图；如果脸、白衣或窗光仍被绿背景污染，我会直接判失败，不拿出来凑数。

### Codex

第一遍 QA：A、B 去青成功，B 是当前中心值；C 虽然不青，但红色被布料和木头抢走，脸反而没有比 B 更暖，`A < B < C` 梯度失败。

我只重生 C：A、B 保留。旧 C 完整留档，不覆盖；新 C 强制把 10–11% 红棕预算只放到脸和手，织物、木头、黄铜不抢红色。

### Codex

C 正在单独重生，A/B 不动。新 C 只允许脸和手提升红棕，布料必须低饱和灰褐，右上窗必须回到小方形。

## Codex

最终 QA 通过：A 是克制暖端，B 是中心值，C 是偏红边界；三张皮肤都已清掉青灰，白衣/窗光与绿黑背景重新分色。初次 C 梯度失败已留档，下面展示的是重生后的最终 C。顺序 A、B、C。

## Codex

### 会话记录 08 | 019f63c3-f282-71f1-8c27-067879326762

#### Janet

还是不够暖，画面中的整体红色都太少了，太青，而且背景很脏，去搜索怎么办，然后再出提示词

## Codex

对，这次根因不只是“脸不够红”，而是整套配色还在把青绿放大：

- 背景同时写了 olive、green-black、旧墙、灰泥、木头、灰尘、grain、halation，叠在一起就会又青又脏。
- 红色只塞进人物皮肤，画面其他中间调几乎没有暖色支撑，所以整体第一眼仍是冷青。
- 继续单纯加脸红，只会得到红脸 + 脏绿背景。

我先查官方调色资料，重点找“暖冷分离、去脏暗部、控制背景色污染”的做法；然后只写 Round 06 的新 A/B/C Prompt，先不生成图。

我会用 `xyq-nest-skill` 管理这一轮创作边界，并按 `imagegen` 的 Prompt 规范整理三版。

## Codex

我已经找到核心原因：之前把“红”主要压在脸上，却同时在背景叠加了 olive、旧墙、灰尘、木质、颗粒和晕光，结果就是“脸略暖、整幅仍青，背景还发脏”。这一轮我会把红暖色扩展到全画面中间调，同时单独清理背景的低饱和阴影与材质噪声；只写新一轮 A/B/C，不生成图片。

## Codex

搜索结论已经明确：专业调色不是把整张图统一“加暖”，而是分开处理色调区域——中间调增加红/琥珀，暗部降低饱和并保持干净，高光留奶油白；同时只对特定色相和亮度段增强，而不是全局 Saturation。这样才能解决“仍偏青”和“越加暖越脏”同时存在的问题。现在我按这个逻辑写 Round 06 三档。

## Codex

新 Prompt 已写完：A/B/C 都比上一轮 C 更暖，差别只在暖红强度；同时把 olive 限制成“墙面物体色”，不再让它充当环境光。背景也从粗糙、氧化、积灰、斑驳、堆叠，改成完整哑光表面、清楚大色块和有序道具。我正在做最后的原创断链与边界检查，仍不会生成图片。

## Codex

第六轮 A/B/C Prompt 已重写，停在生成前，没有生成图片。

本轮不做全局加暖，而是：

- 中间调增加 red-amber / rose-brown。
- 暗部保持低饱和 neutral charcoal。
- 高光保持干净 cream-white。
- 删除粗糙、积灰、氧化、斑驳、杂乱、重颗粒等背景脏感词。

这种分区处理符合 [Blackmagic 的色调区域控制逻辑](https://www.blackmagicdesign.com/products/davinciresolve/color)以及 [Adobe RGB

Curves](https://helpx.adobe.com/in/premiere/desktop/correct-color/add-color-effects/correct-color-using-rgb-curves.html)和 [Hue/Saturation Curves](https://helpx.adobe.com/ca/premiere/desktop/correct-color/add-color-effects/correct-color-using-hue-and-saturation-curves.html)的选择性调色原则。

三档分别为：

- [Prompt A | 干净暖色起点](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-06/prompt\_A\_internal.md)：约 13–14%
- [Prompt B | 建议中心值](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-06/prompt\_B\_descriptive.md)：约 17–18%
- [Prompt C | 自然暖红上限](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-06/prompt\_C\_safe.md)：约 21–22%

[搜索与诊断记录](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-06/search-notes.md)也已保存。三版均通过原创断链检查：零图像输入、不使用原片换色、不复用旧脸或旧图像素。

## 会话记录 09 | 019f644d-7e40-71b2-8e77-41c34cb4e89b

Janet

好的下一组图片给我生成

Codex

我会按 Round 06 已冻结的三份 Prompt，一次分别生成 A、B、C 三张。这里同时使用 `imagegen` 处理独立位图生成，并按小云雀 workflows 规范检查生成入口；三张都坚持零参考图、零旧图编辑、全新 text-to-image。

Codex

小云雀入口当前缺少 `XYQ\_ACCESS\_KEY`，所以不能走它的提交/轮询链路；我按 `imagegen` 的默认内置生成通道继续，不需要 API key，也不会上传任何参考图。先生成三张独立原创建图，再保存到 `round-06/`。

Codex

开始生成。顺序固定为 A、B、C；三张都会保存成 `JW-LTBF-02\_[A/B/C]\_r06.png`，生成完成后本轮立即停下。

## 会话记录 10 | 019f6489-50ae-7780-b016-93b2485650f7

Janet

a 和 b 的颜色很完美了，c 的颜色不够，吸取 a 和 b 的颜色，接下来要注意的是 b 和 c 里的画面很脏。我看到一个关于颜色问题的视频，帮我学习一下 7.15 z@T.yg VyT:/:7pm 08/06 学长独家！image2.0 脏点最强修复攻略 Hello，各位好，这里是大象学长的 AIGC 公开课。今天这一期，从预防到修复，带你一次性讲透 Image2 的脏点问题。# 青年创作者成长计划 # AI # AIGC # AI 生图 # AI 教程  
<https://v.douyin.com/BdmsBZinbmA/> 复制此链接，打开 Dou 音搜索，直接观看视频！

Codex

收到：A、B 的颜色锁定为合格基准；C 不能再自建更暖参数，要直接吸收 A/B 的有效色彩结构。下一轮只处理两件事：补足 C 的暖红、清掉 B/C 的脏点。我先用浏览器完整看你发的教程并提炼可执行规则，这一步不生成图片、不改 Prompt。

## Codex

视频的核心方法我已经抓到了：预防比修复重要——不要在同一条生成链上反复叠图；亮一点、材质简单一点；脏图若必须修，只拿它保留人物位置，颜色和材质必须从干净来源重建，最后才考虑降噪。现在我把这套方法对照本轮 A/B/C，判断哪些能直接用、哪些与我们的“零图片输入”规则冲突。

## Codex

学完了。这个教程的核心不是“加一条去脏提示词”，而是切断脏点累积链路。[视频教程](https://www.douyin.com/video/7660439860620135716)给出的主要经验是：

- 不在同一生成窗口反复续图，避免缺陷与纹理逐轮累积。
- 优先选择明亮、纹理简单、结构清楚的空间。
- 不使用已经发脏的图片继续传递颜色和材质。
- 必须修复时，脏图只负责人物位置；颜色、材质重新从干净来源建立。
- 软件降噪放在最后，不作为第一解决方案。

对应当前结果：

- A：颜色与背景整洁度都作为基准，冻结不动。
- B：颜色冻结。脏感来自大量收音机旋钮、线圈、暗柜和木纹形成的高频细节，不是色彩问题。下一轮只简化背景。
- C：不再继续使用“21-22%暖红上限”这类抽象参数。直接复制 A/B 已验证的肤色、白衣、窗光与红琥珀中间调结构；同时简化卷布、粗纤维、木柜和工具数量。

下一轮执行原则：

43. 每张图独立新生成，不续用旧窗口。
44. B/C 不作为任何图片输入，连“只参考构图”也不用；人物位置继续靠文字锁定。
45. 删除 film grain、重 halation、粗纤维、陈旧 patina、密集小道具和多材料堆叠。
46. 背景改为少量大色块、完整哑光表面、干净黑位和清晰前后分离。
47. C 的颜色直接向 A/B 对齐，不再另造更高的红色参数。
48. 暂不做后期降噪，先把生成源头清干净。

这一步先停在学习结论，不写新 Prompt、不生成图片。

## 会话记录 11 | 019f64e6-0d36-7a42-8f87-8e6fb3fc4816

### Janet

这个总结很到位，那延续这个结论，我们再来一组测试，这次的提示词将做的更完美，出一组 abc 提示词，然后根据提示词出 abc 三个图给我看

### Codex

这轮我会把上轮结论直接变成 Round 07：A 保留干净色彩基准，B 锁住颜色只清背景，C 直接继承 A/B 的色彩结构并清背景。使用 `imagegen` 分三次独立 text-to-image；同时按小云雀规范检查生成入口，绝不续用旧图、旧窗口或参考帧。先完整写出三份 Prompt，再一次给你三张图。

### Codex

我已经把三条线收拢了：A 不动已验证色彩，B 只删高频设备，C 不再单纯“加红词”，而是把墙、衣服、木柜这些稀释暖色的面积重新分配。现在写入 Round 07，并在生成前做一次边界检查。

### Codex

三份 Prompt 已全部写完。它们不是“同一张图换色”：A 是种子档案室、B 是无线电维修间、C 是纺织修复室，人物身份与面孔都要求每次重新发明；三张均明确零图像输入。接下来只做禁用项检查，然后分别生成。

### Codex

Round 07 的三份完整 Prompt 已落盘：

- [A | 锁色 + 干净基线](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-07/prompt\_A\_internal.md)
- [B | 锁色 + 清除无线电背景高频物件](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-07/prompt\_B\_descriptive.md)
- [C | 继承 A/B 暖红结构 + 大色块背景](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-07/prompt\_C\_safe.md)

小云雀本地凭证当前未配置，所以这一轮按既定降级规则使用内置 `imagegen`。下面是三次彼此独立、零图片输入的全新生成；生成完立即停在肉眼评价点。

### Codex

## 会话记录 12 | 019f68b2-bf06-72b2-8a42-5eb677221de3

### Janet

其实色彩好很多，但是让你画面干净不光是背景的颜色物体变成秃的，这可能会变成另外一种风格，，姜文的电影中，有很多内容是通过背景来完成镜头叙事的，这个东西可以另外去写，而且参考图片中的叙事有一部分也是通过景深来表达空间和人物立场人物关系，色调最主要是因为，风格化是造就导演个人电影风格的一个关键节点，这也是我要做这个镜场计划的一点，为想做 ai 导演的人，有想法但对于审美上有一点欠缺或者没有参考的人一些小方向和便利。目前到这里还得出一版 abc 提示词，你根据参考图，去搜索这部电影使用的录制设备和镜头型号，看看这个景深光圈的参数，并研究一下 gptimage2.0 是否能承载这些参数。并加入，如果不能加入，你要去搜索如何能在提示词中实现这种精确的景深。

### Codex

你指出的是这轮真正的问题：我把“干净”误收敛成了“删空”，结果虽然降低了脏点，也一起削弱了背景叙事、人物立场和景深层级。下一轮会把“背景内容密度”和“背景表面脏点”彻底分开：保留能讲关系的物件、动作与遮挡，只清除无意义的高频噪声。

我会先查三件事：影片实际摄影机/胶片/镜头资料、这张母图可合理估算的焦段与 T-stop、GPT Image 2.0 对这些参数是硬控制还是语义引导。然后把结论写进 Round 08 的 A/B/C Prompt；这一轮先不生成图。

### Codex

这一步我会同时用两套规则：`openai-docs` 只查 OpenAI 官方资料，判断 gpt-image-2 的真实控制边界；`imagegen` 用来把摄影参数翻译成模型更能执行的视觉约束。影片器材与摄影资料则单独查摄影师/制作方/专业期刊等一手来源，不能拿器材网站的猜测当事实。

### Codex

`openai-docs` 检查发现官方文档 MCP 目前没装；按该技能规则，我先补上 OpenAI 官方只读文档入口，再继续查参数。这不会改项目工程或接入你的图片生成 API。

### Codex

研究结论已经明确：公开资料能确认摄影机系统、胶片与镜头品牌，但查不到这个具体镜头的焦段和 T-stop；`gpt-image-2` 也没有可硬锁的光圈、焦距或对焦距离参数。因此 Round 08 会把 `Super 35 / 75mm / T3.2` 明确标为测试假设，把真正的控制重心放在“前后人物各自读到什么程度、背景叙事物保留到什么层级”的语义景深上。现在落地 A/B/C 文件。

## Codex

这一轮的关键改写不是增加更多“摄影术语”，而是把背景逐件赋予叙事因果：例如 B 里前景的烧毁真空管，会在背景对应唯一的空管座和熄灭状态灯；即使背景降一档清晰度，观众仍能读出故障、行动和人物分工。这样“干净”来自分组、完整表面和受控微对比，不再来自删空。

## Codex

最终 QA 抓到 B 的一个实际冲突：把 5.1 米背景里的“小插座、小状态灯”同时要求清楚可读，会逼模型局部锐化，反而容易制造 mixed-focus 和 AI 味。我会把它改成背景可读的大形体——打开的检修舱、明显的空位和宽大的未亮灯罩——保留故障因果，但不要求小细节越过景深。

## Codex

Round 08 A/B/C 提示词已完成，本轮未生成图片。

关键结论：

- 公开技术资料列出 ARRICAM LT/ST、ARRIFLEX 235、Cooke/Angénieux 镜头及 Kodak 5207/5219，但没有找到该具体镜头的 camera report，因此不能把焦段与光圈冒充原片参数。[IMDb Technical Specifications](https://www.imdb.com/title/tt1533117/technical/)
- 本轮统一采用 `Super 35 / 75mm / T3.2 / 对焦约 3.5m` 作为测试假设。真正优先执行的是前景主体清晰、背景人物动作可读、远景叙事物保留形体的三层语义景深。
- `gpt-image-2` 没有焦距、光圈、对焦距离或景深等硬控制字段；官方也说明详细 camera specs 可能被宽松理解。因此 Prompt 已将数值降为辅助线索，以可见的清晰度层级作为主控制。[官方 API Reference](https://developers.openai.com/api/reference/resources/images/methods/generate)、[官方 Prompting Guide](https://developers.openai.com/cookbook/examples/multimodal/image-gen-models-prompting-guide)
- “干净”已重新定义为：保留叙事道具，通过分组、完整表面、受控微对比和连续光学衰减消除脏感，不再删空背景。这也符合公开采访中“反对脏乱差”但光线、气氛服从故事和人物的思路。[赵非摄影访谈](https://www.merit-times.com.tw/NewsPage.aspx?unid=246009)

文件：

- [Prompt A | 内部研究版](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-08/prompt\_A\_internal.md:1)
- [Prompt B | 描述性原创版](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-08/prompt\_B\_descriptive.md:1)
- [Prompt C | 安全原创转译版](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-08/prompt\_C\_safe.md:1)
- [摄影机、镜头与景深研究](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-08/camera-lens-dof-research.md:1)
- [GPT Image 2 景深控制研究](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-08/gpt-image-2-depth-control.md:1)
- [背景叙事设计](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-08/background-narrative-design.md:1)

三份当前权威 Prompt 也已同步到 `tests/JW-LTBF-02/` 根目录。B 的故障线索已改成背景可读的大形体，避免小灯、小插座迫使模型制造局部锐化和假景深。最终 QA 通过，B/C 无片名、导演、演员或真实角色名。

## 会话记录 13 | 019f68e9-ee3c-7483-aff2-1607bbdbc851

Janet

将新的提示词做出一版图片

Codex

我会按 Round 08 的 A、B、C 三份新提示词分别独立生成：三次零图像输入，不引用原片或旧测试图；颜色保持上一轮方向，这次只观察叙事背景与三层景深。现在直接开始。

## 会话记录 14 | 019f69b7-ec6d-7511-9dd6-e535ebf25acb

Janet

为什么我没有观测到景深？你做了什么？重新定义 abc 的景深提示词，进入下一轮

## Codex

你没看错：这一轮三张图几乎都成了“全景深式的均匀清楚”，我写了景深层级，但同时塞入太多“背景必须可读、物件必须 recognizable”的要求，模型把“可读”执行成了“全部对焦”。我会用 imagegen 规范重新拆变量：A/B/C 不再换场景，而是固定同一人物、同一空间、同一色彩，只测试三档景深；先复盘三张失败点，再写 Round 09 提示词，不生成图片。

## Codex

这次不会再靠 `75mm / T3.2` 这一行碰运气。Round 09 将固定 Round 08 B 的原创无线电维修间，因为它和母图同样是“右前主角、左后人物、后窗与功能道具”；三版逐字锁定人物、机位、色彩、距离和道具，只让 A/B/C 分别承担强浅景深、目标景深、叙事保留景深。背景叙事改由轮廓、位置和动作方向读取，不再要求后景五官、手指和小零件清楚。

## Codex

你没看错，Round 08 确实没有做出景深，不是观察问题。

原因有三个：

- 我一边要求后景失焦，一边反复要求后景人物、手部、道具和材质“clearly readable / recognizable”。模型最终选择把整个房间画清楚。
- `75mm / T3.2` 只是文字线索，GPT Image 2 不会按真实光学公式计算景深。
- A/B/C 同时更换了人物和场景，根本不是有效的景深对照实验。

Round 09 已重置：

- 三版全部锁定同一个原创无线电维修间、同一人物关系、机位、75mm 视角、距离、光线和颜色。
- 公共 Prompt 基底经过 `diff` 验证逐字一致。
- 唯一变量是景深：
- A：T2.0 强浅景深，后景五官完全不可分辨。
- B：T2.8 母图目标档，只保留后景人物头部朝向、身体前倾和手臂动作。
- C：T4.0 背景叙事增强，但虹膜、睫毛、手指、小控件和材质微纹理仍必须失焦。
- 景深要求已放到 Prompt 最前面，标为最高优先级。
- 背景叙事改由轮廓、位置、色块和动作方向完成，不再靠清晰小细节。

文件：

- [Round 08 失败复盘](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-09/failure-analysis.md:1)
- [Round 09 单变量设计](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-09/dof-bracket-design.md:1)
- [Prompt A | 强浅景深](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-09/prompt\_A\_internal.md:1)
- [Prompt B | 母图目标景深](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-09/prompt\_B\_descriptive.md:1)
- [Prompt C | 叙事保留景深](/Volumes/Janet/janet-public-site/镜场计划/tests/JW-LTBF-02/round-09/prompt\_C\_safe.md:1)

当前权威 Prompt 已同步到测试根目录。Round 08 已标记为失败档案；Round 09 目前停在生成前，尚未出图。

## 会话记录 15 | 019f6a0c-00fa-73f2-9b8d-255dc4fe68e8

Janet

下一轮，提示词，图片同步出

Codex

明白。之后每一轮都按“先落盘 A/B/C Prompt，随后同轮直接生成三张图”执行。现在就用 Round 09 已完成的三档景深提示词，分别进行三次零图像输入生成并同步保存。

## 会话记录 16 | 019f6d98-86ff-7da2-96c4-ee442d6030fe

Janet

a 版的色调稍好，但还是缺红色，暗部提高青色，中调提高洋红，少量的，bc 参数要再次提高，下一组

Codex

收到。Round 10 继续按“Prompt 与图片同轮同步输出”。这次只动色彩：暗部加入少量 clean cyan，避免变绿；中间调提高 muted magenta-red 和人物面部红色权重；A 小幅，B/C 逐级提高。Round 09 的景深、人物关系、背景叙事和光线全部锁定。我会用 imagegen 的单变量迭代规则直接落盘并生成三张。

## 会话记录 17 | 019f6da8-5ae7-7991-afde-dd99ff132c1a

Janet

重试

Codex

重试继续。Round 10 现在直接完成：A/B/C 新色彩提示词落盘后，马上生成三张，不再停在中间。

Codex

色彩分区已经锁清：不是全局 Tint。青色只进设备空腔、墙角、桌下等最深暗部；黑位仍近中性。洋红红只进人物皮肤和少量木质中间调；白衣、窗光和高光完全保护，避免变粉。整体仍必须读作暖色，红色感知权重大于暗部青色。A 是微调，B 是目标档，C 是受控上限。

阶段收尾 | Janet

完美！总结这一次全部测试内容，像测试 1 那样，增加一个把我们的对话内容，提示词，图片都放进一个文档；这个 abc 版本其实还是比较完美的，我觉得你可以总结一下这次我在会话提到的新的研究的内容，这是第一次测试没有的。然后你把第一次的那个文档，也拆成几轮儿和第二次测试一样的，图片，提示词文档。每个测试都首要保留一个文档。

## 6. 测试计划与评分标准

### test-plan.md

#### 目标

完成第二张电影母图的视觉复刻实验闭环。当前只进入第一轮，不追求最终答案。

#### 第一轮执行顺序

49. 核对正式母图、5 秒片段与证据边界。
50. 完成 A / B / C 三份首轮 Prompt。
51. A / B / C 各生成 1 张测试图，统一归档到 `tests/JW-LTBF-02/round-01/`。
52. 生成后停止，等待 Janet 肉眼评价。

#### 第一轮观察项

53. 人物身份与权力层级是否正确。
54. 室内空间与前后景关系是否正确。
55. 白衣颜色、曝光、材质和褶皱是否正确。
56. 大窗室内光、主体补光与景深是否正确。
57. 暖肤色、深绿黑背景和高光 roll-off 是否正确。
58. 是否出现塑料皮肤、畸形手、错误窗格、伪文字、过锐、过度干净等 AI 味。

#### 后续循环

Janet 提供原图、A / B / C 结果与肉眼反馈后，只修改有问题的变量：

- 色彩问题：只改区域调色与曝光语言。
- 人物问题：只改身份层级、情绪、表情或姿态。
- 空间问题：只改机位、焦段倾向、人物距离和环境结构。
- AI 味：只改皮肤、衣料、手部、眼镜、建筑几何、颗粒与摄影描述。

每一轮保留上一轮固定项，不整份推翻。第二轮仍生成 A / B / C 三张，再等待肉眼评价。

## 冻结标准

- 总分至少 85 / 100。
- 人物身份 / 权力关系、空间层级、白衣、室内光和色彩均稳定通过。
- 无可识别明星脸、字幕、伪文字、logo、水印或播放器 UI。
- 无明显 AI 人脸、手部、眼镜、窗格和材质错误。
- 连续两轮固定项不回退，且 Janet 明确确认阶段收尾，才标记冻结。

## 边界

- 不进入网站开发。
- 不接 API。
- 不修改工程架构。
- 不修改 `JW-LTBF-01`。
- 不提前制作最终作品。

## review-score.md

每项 0-10 分，总分 100 分。每轮生成单独复制一份填写，不覆盖历史评分。

| 项目              | 通过标准                      | 本轮得分 | 备注 |
|-----------------|---------------------------|------|----|
| 原创脸与安全边界        | 两张脸均不似演员或公众人物，无已知剧照精确复刻   | 待评   |    |
| 人物权力关系          | 前景右中人物主导，背景左侧人物承压且关系明确    | 待评   |    |
| 空间层级            | 前景清晰、背景虚化但可读，窗格与立柱层次成立    | 待评   |    |
| 白衣高光            | 明亮但不过曝，褶皱与体积完整            | 待评   |    |
| 白衣材质            | 有重量、少量大褶皱，无细碎噪声或塑料感       | 待评   |    |
| 肤色              | 暖红橙、有血色，不灰、不绿、不蜡          | 待评   |    |
| 中间调密度           | 皮肤、白衣阴影和室内结构厚实，不淡薄        | 待评   |    |
| 暗部与背景           | 深绿黑 / 炭灰 / 木棕干净可读，不死黑、不灰雾 | 待评   |    |
| 时代与空间可信度        | 旧式木作和窗格可信，无现代会所 / 商业棚感    | 待评   |    |
| 字幕 / 文字 / UI 清除 | 无字幕、伪文字、logo、水印或播放器界面     | 待评   |    |

## 结论

- 总分：待评 / 100
- 是否通过：待评

- 本轮唯一变量：待填
- 下一轮只改：待填
- 安全风险：待填

## 7. 完整资产与 SHA-256

只列 canonical Prompt、canonical 图片与 Round 05 rejected C。macOS AppleDouble sidecar 不属于资产。

## 8. 阶段收尾

**Janet** : Round 10 A/B/C : 完美 , 比较完美。

本测试已完成从原片分析、A/B/C 迭代、原创断链、分区色彩、脏点控制、背景叙事、景深复盘到同场景 bracket 的视觉闭环。当前停止继续改图，等待 Janet 明确是否正式冻结 JW-LTBF-02。
